

## Tips to install BT-300

1. For all 2.5” and 3.5” SATA hard drives – Use the 4 pins power connector plug onto the BT-300 adapter kit. Then connect the BT-300 adapter to the SATA hard drives. Afterward, power up the drives by connect the power adapter to the power cord that plug onto the wall.
2. For all 3.5” and 5.25” IDE drives – Make sure all IDE drives set as Master drive, use the 4 pins power connector plug directly onto the drive. Afterward, power up the drives by connect the power adapter to the power cord that plug onto the wall.
3. For all 2.5” IDE drives – do not use any power from the power adapter all. The USB connection to the computer will power it up.
4. After the hard drive was power up and spinning, wait a while and then connect the USB connector from BT-300 to the USB port on the computer.
5. If any hard drive is new and has never been formatted, make sure to initialize and partition in order to access the new hard drive.
