

# CMX512-3200C2

The CMX512-3200C2 is a 512 MByte, ultra-performance DDR SDRAM DIMM screened specifically for gaming applications. This part has been selected by our Compatibility Lab for its outstanding performance in motherboards commonly used in gaming rigs. This memory has been verified to operate at 200 MHz (DDR400) at aggressive 2-3-3-6 latency settings on Intel CPU platforms, and 2.5-3-3-6 on AMD platforms. Side-by-side comparison indicates that this is one of the fastest DDR modules available in the world.

## FEATURES

- 512 Megabytes of memory
- Implemented using x 8 DDR SDRAMs with 6.0 nanosecond access time
- 100% tested at 200 MHz (DDR400) in high performance motherboards
- Integrated aluminum heat spreader for improved thermal performance
- Benchmarked over multiple chip sets, processors, and motherboards
- Legendary Corsair reliability and service
- Lifetime warranty

## TEST SPECS

- Each module is tested in a DFI 865PE Infinity test setup at 200 MHz
- Tested at advanced latency settings
  - Tested at 2-3-3-6 settings on Intel platforms
  - Tested at 2.5-3-3-6 settings on AMD platforms
- SPD programmed at JEDEC standard values

The Fine Print: Newer motherboards may be used for production test as they become available. Corsair may periodically update the part with newer RAM revisions of same or greater performance. RAM used on the module may change without notice. © March 2004, Corsair Memory, Inc.
