System Upgrade in 30 Seconds

Why is this so perfect for system builders? Utilizing an SSD can greatly enhance system performance, and is truly the future of the data storage industry. However, most people have not yet upgraded their systems to use 2.5" form factor yet. With the MB882, you can help your client quickly and easily to make this transition without changing their entire system, especially in this time of resource scarcity.

Introducing the Icy Dock MB882SP-1S-1B 2.5" to 3.5" SATA HDD and SSD Converter. This device is simple, but packs a huge punch for anyone looking to maximize small form factor drives, especially SSDs. The MB882 takes any standard 2.5" SATA hard disk or solid state drive, and converts its size so that it conforms to the exact specifications of a standard 3.5" SATA drive; the physical dimensions, mounting holes, power, and SATA connections, are all the same as most standard 3.5" SATA drive.

Universal Mounting Holes for Most Common PC case

Regular 3.5" SATA HDD

MB882SP-1S-1B

Perfect Fit, Perfect Solution

The MB882 Converter could not be more convenient. It is completely screwless, and a 2.5" drive installs in a matter of seconds. Then, it mounts just like a 3.5" drive. For normal PC cases and server cases, the MB882 can also be used inside mobile racks. As stated before, its physical dimensions and connectors are all standard. So out of the box, it will fit any standard mobile rack or hot swap bay.

Currently, many system builders have already accepted the MB882 as a standard for their business. We also have some of the computer industry giants testing out this product as we speak.
