

# 1042418 Ft Lee Express CL6

This schematic is representation of the top selling SKU's in each category based on store specific scan data as well as syndicated data. Each segment is given a percent of available space equal to that segment's percent of total store level category sales. Items included on these POGS were given a designation of "CORE", "APPROVED", and "NEW APPROVED". These item designations were determined and reviewed by AAFES Headquarters. Upon completion of the reset, please fill in the attendance section and make note of any changes that were made. Please KEEP for your records.

## Best Practices for Cooler Resets

PepsiCo is the Reset Captain. The PepsiCo Rep should contact the General Manager to schedule the reset dates and times per store. The store manager should place a sign in the receiving area and contact the appropriate suppliers once you have agreed on a specific date and time.

Verify the dates of the proposed reset. Notify all shift managers, night managers, receivers and stockers. Stores should not stock product prior to the reset. This is especially important when the flow of the coolers is changing.

Please contact PepsiCo POG Support with questions.

What you need to bring:

- 2 Phillips screwdrivers
- Pliers
- Hammer
- Extra wing nuts or screws
- Sharp knife for cutting glides
- Camera

### Cooler Reset Procedures

1. On the day before the reset, go to the store that you will be resetting. Bring a color copy of the POG.
2. Ensure that all the proper equipment necessary to do the reset is available (i.e. rails, glides or hardware). Pack your vehicle with the tools needed for the next day reset.
3. On the day of the reset, ensure that you have your own color copy of the POG. Make sure to take before pictures of all of the cooler doors.
4. Start to empty the doors that are assigned to you and remove any additional products that will not remain in the set.
5. Adjust the shelves to accommodate tall products before adjusting rails.
  - First, adjust rails in the front utilizing products for size.
  - Second, adjust the back of the rail ensuring that that product will glide smoothly to the front.
  - Start at the left side and adjust accordingly to the number of facings allowed in the POG.
  - If glides are being used, make sure they are cut or expanded to the length of the shelves so that products can be stocked easily from the back.
6. Before replacing product, please clean all shelves, glides and/or railings.
7. When the reset has been completed, re-label the front and the back of the shelf spaces.
8. Place existing product in the cooler behind its assigned space to ensure ease of stocking.
9. Take pictures of the doors after the reset is completed.
10. Report any issues or changes to the Manager on duty.
11. Please communicate any changes to dsprabary@eisdallas.com.
12. Leave a copy of the POG at the store to help vendors maintain the reset integrity.
13. Post copy of the POG in Manager's office for continued reference.
