

# SAP Note 1847352 - Customising tables read with incorrect tax reference number

Note Language: English

Version: 1 Validity:

Valid Since 16.04.2013

## Summary

### Symptom

Customising tables like the credentials table are read with tax reference number and indicator which is stored in the employee data, rather than the one entered on the screen. This causes the e-filing credentials to be incorrectly read

### Other terms

### Reason and Prerequisites

### Solution

The table reads that rely on tax reference number and indicator have been changed to use the one chosen on the screen rather than saved on the employee record.

Please apply the coding changes within this note to correct the error.
