Installation

WARNING! PCI Express cards, like all computer equipment, can be severely damaged by static electricity. Be sure that you are properly grounded before opening your computer case or touching your PCI Express card. StarTech.com recommends that you wear an anti-static strap when installing any computer component. If an anti-static strap is unavailable, discharge yourself of any static electricity build-up by touching a large grounded metal surface (such as the computer case) for several seconds. Also be careful to handle the PCI Express card by its edges and not the gold connectors.

1. Make sure that your system is unplugged and you are grounded.
2. Remove the cover of your system (see your computer's user manual for details, if necessary) and gently
3. turn your computer onto its side, so that the PCI Express expansion slot openings on the motherboard are accessible.
4. Align the x1 PCI Express connector provided by PEX1T0162 with an available PCI Express slot.
5. Gently insert the card into the empty slot, making sure it is seated firmly.
6. Replace and fasten the computer cover.
