Introduction

RKUNITAPE is designed to add unit markings to any server rack that doesn't have the markings due to design or wear. You can use the unit labels to manage the space in your server rack more effectively and to make sure that your rack-mountable equipment is properly aligned. The unit labels are each 49 rack units long, but you can cut them to fit properly in your server rack. The unit labels are easy to apply and, if necessary, you can reuse them.

For more information about rack units, see the "What is a U?" section.

Package contents

- 2 x rack-unit labels
- 1 x instruction manual

System requirements

- Server rack
- Isopropyl alcohol
- Scissors (if you need to cut the label)

System requirements are subject to change. For the latest requirements, please visit www.StarTech.com/RKUNITAPE.

Prepare the rack surface for application

Caution! The surface that you apply the unit labels to must be dry and free of contaminants. Otherwise, the adhesive won't stick to the surface.
1. To clean the surface, use isopropyl alcohol or a similar substance to remove any dirt or contaminants.
2. Dry the surface thoroughly.

Apply the unit label

Caution! The unit label has some stretch and flex to it. Make sure that you line up the label with the corresponding rack units as you apply the label.

1. Prepare the surface for application.
2. If necessary, use scissors to cut the unit label to fit the server rack that you're using.
Note: Make sure that you cut the unit label along the U markings on the label.
3. Peel off a small section of the removable backing from the label.
4. Place the exposed adhesive surface on the server rack, making sure to line up the U markings on the label with the server rack units.
5. Apply firm and continuous pressure to the unit label and rack as you peel off the removable backing.

Remove the unit label

1. To remove the unit label from the server rack, grab one end of the label and carefully pull it off of the rack.
2. To clean the surface, use isopropyl alcohol or a similar substance to remove any dirt or contaminants.
3. If necessary, reapply the unit label to another server rack.

What is a U?

Server racks are classified by U size and depth. U is the standard unit of measurement used to designate the vertical usable space of a server rack, or the height of racks and cabinets. 1U is equal to 1.74 in. For example, if a rack is designated as 20U, it has 20 rack spaces for equipment and has 35 in. (20 times 1.75) of vertical usable space.

RKUNITAPE includes two unit labels that are each 49 rack units long.
