# AD-800 Release Notes

## Contents

## Updates

Always use the most recent firmware for this device. Please visit the TEAC web site (http://audio.teac.com/support/downloads/) to check for the latest firmware.

## Maintenance items

### V1.24 fix

● When searching forward during playback of MP3 files on a USB flash drive, if the USB search (◄◄) button was released after being pressed and held, searching backward would not stop and the unit would stop responding to operations. This has been fixed.

## Checking the firmware version

Before updating your AD-800, check its firmware version.

**1** **Press the unit POWER button to turn it off.**

**2** **While pressing and holding the SOURCE button, press the POWER button.**

When the power turns on, the CD and MCU versions are shown alternately.

Example:

**CD**

dB −30 20    10    6    3    0 OVER

AD800-CD-V1.00

**3** **Press the unit POWER button to turn it off.**

## Firmware update procedures

**1** **Download the file**

Download a compressed file with the latest version of the firmware from the TEAC website and decompress it (http://audio.teac.com/support/downloads/).

**2** **Copy the updater data**

Place the "Boot.ali" and "nemo.bin" files, which were created automatically during decompression, into the root directory of an empty USB flash drive.

    ROOT (Root directory)
    ├─ Boot.ali
    └─ nemo.bin

- Do not change the file names.

**3** **Update the firmware**

1) Press the SOURCE button and select USB.

2) After confirming that "NO USB" appears on the display, connect the USB flash drive that contains the copied updater data to the USB port on the front of the unit.

   "UPGRADING" appears on the display and firmware updating starts.

   **CAUTION**

   Do not disconnect the power cord or turn the power off while "UPGRADING" appears on the display. If the unit should lose power during a firmware update, restarting it might not be possible or it could otherwise malfunction.

3) "UPGRADE OK" appears on the display after about a minute, confirming that the update has completed.

4) Disconnect the USB flash drive and turn the unit off.

5) Follow the procedures in "Checking the firmware version" above to confirm that the unit is now using the latest version.
