PART I User's Guide

Introducing the NWA

This chapter introduces the main applications and features of the NWA. It also discusses the ways you can manage your NWA.

1.1 Introducing the NWA

Your NWA extends the range of your existing wired network without additional wiring, providing easy network access to mobile users.

The NWA controls network access with MAC address filtering and RADIUS server authentication. It also provides a high level of network traffic security, supporting IEEE 802.1x, Wi-Fi Protected Access (WPA), WPA2 and WEP data encryption. Its Quality of Service (QoS) features allow you to prioritize time-sensitive or highly important applications such as VoIP.

Your NWA is easy to install, configure and use. The embedded Web-based configurator enables simple, straightforward management and maintenance.

See the Quick Start Guide for instructions on how to make hardware connections.

1.2 Applications for the NWA

The NWA can be configured to use the following WLAN operating modes:

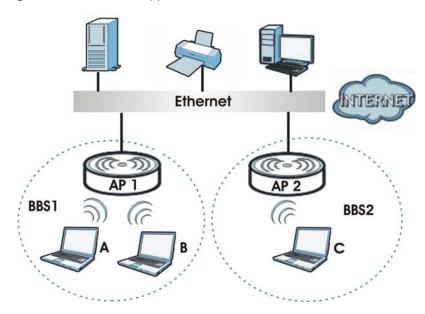

- 1 Access Point
- 2 Bridge/Repeater
- 3 AP + Bridge
- 4 Wireless Client
- 5 Multi SSID

Applications for each operating mode are shown below.

1.2.1 Access Point

The NWA is an ideal access solution for wireless Internet connection. A typical Internet access application for your NWA is shown as follows. Stations A, B and C can access the wired network through the NWAs.

Figure 1 Access Point Application

1.2.2 Bridge / Repeater

The NWA can act as a wireless network bridge and establish wireless links with other APs. In the figure below, the two NWAs (A and B) are connected to independent wired networks and have a bridge connection (A can communicate with B) at the same time. A NWA in repeater mode (C) has no Ethernet connection.

When the NWA is in **Bridge / Repeater** mode, security between APs (the Wireless Distribution System or WDS) is independent of the security between the wireless stations and the AP. If you do not enable WDS security, traffic between APs is not encrypted. When WDS security is enabled, both APs must use the same pre-shared key. See Section 5.4.2 on page 53 for more details.

Once the security settings of peer sides match one another, the connection between devices is made.

At the time of writing, WDS security is compatible with other ZyXEL NWA-series access points only. Refer to your other access point's documentation for details.

Figure 2 Bridge Application

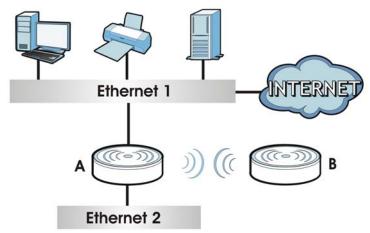

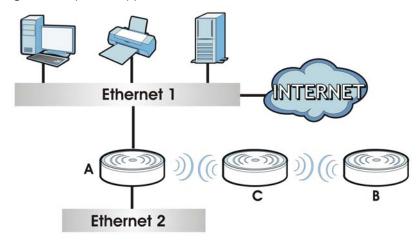

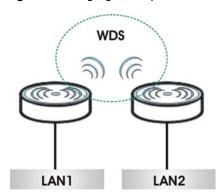

Figure 3 Repeater Application

1.2.2.1 Bridge / Repeater Mode Example

In the example below, when both NWAs are in bridge mode, they form a WDS (Wireless Distribution System) allowing the computers in LAN 1 to connect to the computers in LAN 2.

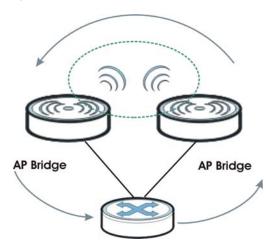

Figure 4 Bridging Example

Be careful to avoid bridge loops when you enable bridging in the NWA. Bridge loops cause broadcast traffic to circle the network endlessly, resulting in possible throughput degradation and disruption of communications. The following examples show two network topologies that can lead to this problem:

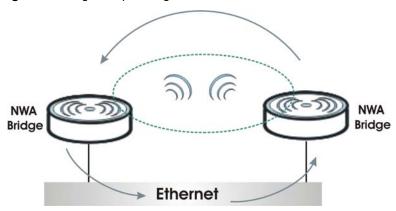

• If two or more NWAs (in bridge mode) are connected to the same hub.

Figure 5 Bridge Loop: Two Bridges Connected to Hub

• If your NWA (in bridge mode) is connected to a wired LAN while communicating with another wireless bridge that is also connected to the same wired LAN.

Figure 6 Bridge Loop: Bridge Connected to Wired LAN

To prevent bridge loops, ensure that your NWA is not set to bridge mode while connected to both wired and wireless segments of the same LAN.

1.2.3 **AP + Bridge**

In AP+Bridge mode, the NWA supports both AP and bridge connection at the same time.

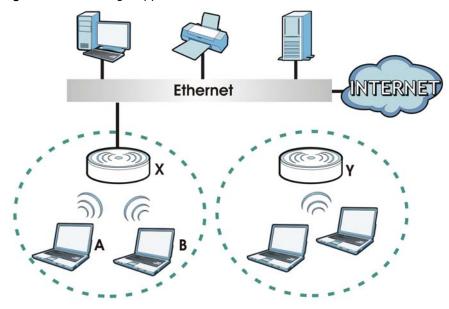

In the figure below, **A** and **B** use **X** as an AP to access the wired network, while **X** and **Y** communicate in bridge mode.

Using AP + Bridge mode, your NWA can extend the range of the WLAN. In the figure below, A and B act as AP + Bridge devices that forward traffic between associated wireless workstations and the wired LAN.

When the NWA is in **AP+Bridge** mode, security between APs (the Wireless Distribution System or WDS) is independent of the security between the wireless stations and the AP. If you do not enable WDS security, traffic between APs is not encrypted. When WDS security is enabled, both APs must use the same pre-shared key. See Section 5.4.3 on page 58 for more details.

Unless specified, the term "security settings" refers to the traffic between the wireless stations and the NWA.

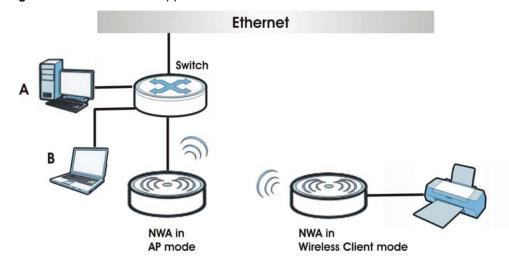

Figure 7 AP + Bridge Application

1.2.4 Wireless Client

The NWA can be used as a wireless client to communicate with an existing network. In the figure below, the printer can receive requests from the wired computer clients A and B via the NWA in Wireless Client mode.

Figure 8 Wireless Client Application

1.2.5 Multi SSID

A Basic Service Set (BSS) is the set of devices forming a single wireless network (usually an access point and one or more wireless clients). The Service Set IDentifier (SSID) is the name of a BSS. In **Multi SSID** mode, the NWA provides multiple virtual APs, each forming its own BSS and using its own individual SSID profile.

You can configure up to eight SSID profiles, and have up to four active at any one time.

You can assign different wireless and security settings to each SSID profile. This allows you to compartmentalize groups of users, set varying access privileges, and prioritize network traffic to and from certain BSSs.

To the wireless clients in the network, each SSID appears to be a different access point. As in any wireless network, clients can associate only with the SSIDs for which they have the correct security settings.

For example, you might want to set up a wireless network in your office where Internet telephony (VoIP) users have priority. You also want a regular wireless network for standard users, as well as a 'guest' wireless network for visitors. In the following figure, VoIP_SSID users have QoS priority, SSID01 is the wireless network for standard users, and Guest_SSID is the wireless network for quest users.

Figure 9 Multiple BSSs

1.3 Ways to Manage the NWA

Use any of the following methods to manage the NWA.

- Web Configurator. This is recommended for everyday management of the NWA using a (supported) web browser.
- Command Line Interface. Line commands are mostly used for troubleshooting by service engineers.
- FTP (File Transfer Protocol) for firmware upgrades.
- SNMP (Simple Network Management Protocol). The device can be monitored by an SNMP manager.

1.4 Configuring Your NWA's Security Features

Your NWA comes with a variety of security features. This section summarizes these features and provides links to sections in the User's Guide to configure security settings on your NWA. Follow the suggestions below to improve security on your NWA and network.

1.4.1 Control Access to Your Device

Ensure only people with permission can access your NWA.

- Control physical access by locating devices in secure areas, such as locked rooms. Most NWAs have a reset button. If an unauthorized person has access to the reset button, they can then reset the device's password to its default password, log in and reconfigure its settings.
- Change any default passwords on the NWA, such as the password used for accessing the NWA's
 web configurator (if it has a web configurator). Use a password with a combination of letters and
 numbers and change your password regularly. Write down the password and put it in a safe
 place.
- See Chapter 11 on page 94 for instructions on changing your password.
- Configure remote management to control who can manage your NWA. See Chapter 12 on page 100 for more information. If you enable remote management, ensure you have enabled remote management only on the IP addresses, services or interfaces you intended and that other remote management settings are disabled.

1.4.2 Wireless Security

Wireless devices are especially vulnerable to attack. If your NWA has a wireless function, take the following measures to improve wireless security.

- Enable wireless security on your NWA. Choose the most secure encryption method that all devices on your network support. See Section 7.4 on page 73 for directions on configuring encryption. If you have a RADIUS server, enable IEEE 802.1x or WPA(2) user identification on your network so users must log in. This method is more common in business environments.
- Hide your wireless network name (SSID). The SSID can be regularly broadcast and unauthorized users may use this information to access your network. See Section 6.2 on page 67 for directions on using the web configurator to hide the SSID.
- Enable the MAC filter to allow only trusted users to access your wireless network or deny unwanted users access based on their MAC address. See Section 9.4 on page 88 for directions on configuring the MAC filter.

1.5 Good Habits for Managing the NWA

Do the following things regularly to make the NWA more secure and to manage it more effectively.

1.6 Hardware Connections

See your Quick Start Guide for information on making hardware connections.

1.7 LEDs

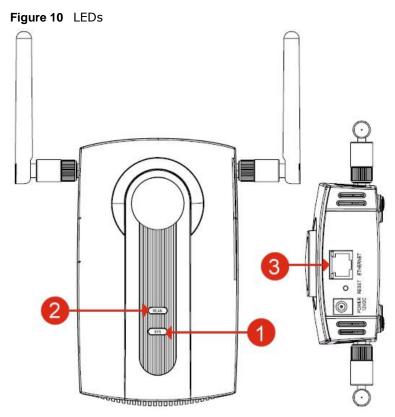

Table 1 LEDs

LABEL	LED	COLOR	STATUS	DESCRIPTION
1	SYS	Green	On	The NWA is receiving power and ready for use.
		Red	Flashing	There is system error and the NWA cannot boot up.
			On	The NWA doesn't have an Ethernet connection with the LAN.
			Off	The NWA is not receiving power.
2	WLAN	Green	On	The wireless adaptor WLAN is active.
			Blinking	The wireless adaptor WLAN is active, and transmitting or receiving data.
			Off	The wireless adaptor WLAN is not active.

Table 1 LEDs (continued)

LABEL	LED	COLOR	STATUS	DESCRIPTION
3	ETHERNET	Green	On	The NWA has a 10/100 Mbps Ethernet connection.
			Blinking	The NWA has a 10/100 Mbps Ethernet connection and is sending or receiving data.
		Yellow	On	The NWA has a 1000 Mbps Ethernet connection.
			Blinking	The NWA has a 1000 Mbps Ethernet connection and is sending/receiving data.
			Off	The NWA does not have an Ethernet connection.

Introducing the Web Configurator

This chapter describes how to access the NWA's web configurator and provides an overview of its screens.

2.1 Accessing the Web Configurator

- 1 Make sure your hardware is properly connected and prepare your computer or computer network to connect to the NWA (refer to the Quick Start Guide).
- 2 Launch your web browser.
- **3** Type "192.168.1.2" as the URL (default). The login screen appears.

Figure 11 The Login Screen

4 Type "admin" as the (default) username and "1234" as the (default) password. Click Login.

You should now see the **Status** screen. See Chapter 2 on page 20 for details about the **Status** screen.

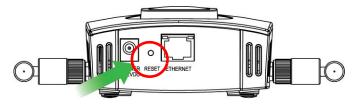

Note: For security reasons, the NWA automatically logs you out if there is no activity for longer than five minutes after you log in. If this happens, simply log back in again.

2.2 Resetting the NWA

If you forget your password or cannot access the web configurator, you will need to use the **RESET** button at the rear panel of the NWA. This replaces the current configuration file with the factory-

default configuration file. This means that you will lose all the settings you previously configured. The password will be reset to "1234".

Figure 12 The RESET Button

2.2.1 Methods of Restoring Factory-Defaults

You can erase the current configuration and restore factory defaults in two ways:

Use the **RESET** button to upload the default configuration file. Hold this button in for about 10 seconds (the lights will begin to blink). Use this method for cases when the password or IP address of the NWA is not known.

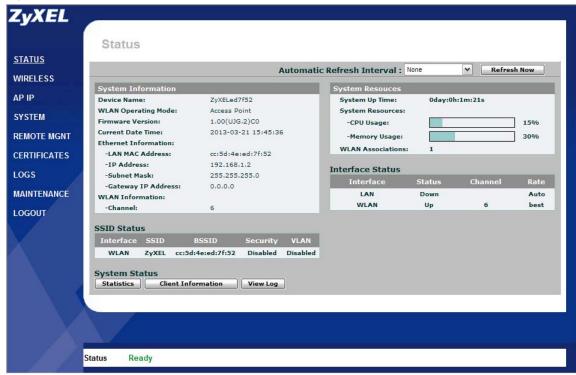

Use the web configurator to restore defaults (refer to Section 15.7 on page 123).

2.3 Navigating the Web Configurator

The following summarizes how to navigate the web configurator from the **Status** screen.

Check the status bar at the bottom of the screen when you click **Apply** or **OK** to verify that the configuration has been updated.

Figure 13 Status Screen of the Web Configurator

- Click the links on the left of the screen to configure advanced features such as WIRELESS
 (Wireless Settings, Multi-SSID, Security, RADIUS, MAC Filter), AP IP, SYSTEM (General,
 Password and Time), REMOTE MGNT (Telnet, FTP, WWW and SNMP), CERTIFICATES, and
 LOGS (View Log and Log Settings).
- Click MAINTENANCE to view information about your NWA or upgrade configuration and firmware files. Maintenance features include Client Information, Channel Scan, F/W (firmware) Upload, Configuration File (Backup, Restore and Default) and Reboot.
- Click LOGOUT at any time to exit the web configurator.

Status Screens

The Status screens display when you log into the NWA, or click Status in the navigation menu.

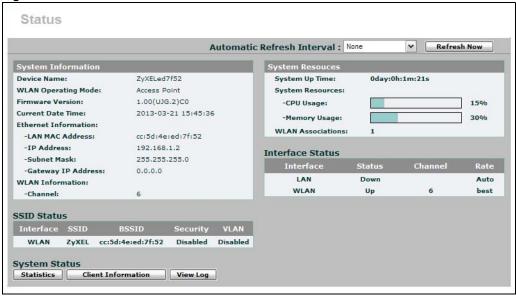

Use the **Status** screens to look at the current status of the device, system resources, and interfaces. The **Status** screens also provide detailed information about system statistics, associated wireless clients, and logs.

3.1 The Status Screen

Use this screen to get a quick view of system, Ethernet, WLAN and other information regarding your NWA.

Click Status. The following screen displays.

Figure 14 The Status Screen

The following table describes the labels in this screen.

Table 2 The Status Screen

LABEL	DESCRIPTION	
Automatic Refresh Interval	Select how often you want the NWA to update this screen.	
Refresh Now	Click this to update this screen immediately.	
System Information		

 Table 2
 The Status Screen (continued)

LABEL	DESCRIPTION
Device Name	This field displays the NWA system name. It is used for identification. You can change this in the System > General screen's Device Name field.
WLAN Operating Mode	This field displays the current operating mode of the first wireless module (Access Point, Bridge/Repeater, AP+Bridge, Wireless Client, or Multi SSID). You can change the operating mode in the Wireless > Wireless Settings screen.
Firmware Version	This field displays the current version of the firmware inside the device. It also shows the date the firmware version was created. You can change the firmware version by uploading new firmware in Maintenance > F/W Upload .
Current Date Time	This field displays the date and time configured on the NWA. You can change this in the System > Time Setting screen.
Ethernet Information	
LAN MAC Address	This displays the MAC (Media Access Control) address of the NWA on the LAN. Every network device has a unique MAC address which identifies it across the network.
IP Address	This field displays the current IP address of the NWA on the network.
Subnet Mask	Subnet masks determine the maximum number of possible hosts on a network. You can also use subnet masks to divide one network into multiple sub-networks.
Gateway IP Address	This is the IP address of the gateway. The gateway is a router or switch on the same network segment as the device's LAN port. The gateway helps forward packets to their destinations.
WLAN Information	
SSID	This field displays the SSID (Service Set Identifier).
	This is available only when the WLAN Operating Mode is Wireless Client .
Channel	The channel or frequency used by the NWA to send and receive information.
Status	This shows the current status of the wireless LAN.
	This is available only when the WLAN Operating Mode is Wireless Client .
Security Mode	This displays the security mode the NWA is using.
	This is available only when the WLAN Operating Mode is Wireless Client .
System Resources	
System Up Time	This field displays the elapsed time since the NWA was turned on.
CPU Usage	This field displays what percentage of the NWA's processing ability is currently being used. The higher the CPU usage, the more likely the NWA is to slow down.
Memory Usage	This field displays what percentage of the NWA's volatile memory is currently in use. The higher the memory usage, the more likely the NWA is to slow down. Some memory is required just to start the NWA and to run the web configurator.
WLAN Associations	This field displays the number of wireless clients currently connected to the NWA's wireless network(s).
	This is not available when the WLAN Operating Mode is Wireless Client.
Interface Status	
Interface	This column displays each interface of the NWA.
Status	This field indicates whether or not the NWA is using the interface.
	For each interface, this field displays Up when the NWA is using the interface and Down when the NWA is not using the interface.
Channel	Click this to see which wireless channels are currently in use in the local area. See Section 15.5 on page 120.

Table 2 The Status Screen (continued)

LABEL	DESCRIPTION	
Rate	For the LAN port this displays Auto or the port speed and duplex setting that you configured in the System > General screen.	
	For the WLAN interface, it displays the downstream and upstream transmission rate or N/A if the interface is not in use.	
SSID Status	This is not available when the WLAN Operating Mode is Wireless Client.	
Interface	This column displays each of the NWA's wireless interfaces.	
SSID	This field displays the SSID(s) currently used by each wireless module.	
BSSID	This field displays the MAC address of the wireless module.	
Security	This field displays the type of wireless security used by each SSID.	
VLAN	This field displays the VLAN ID of each SSID in use, or Disabled if the SSID does not use VLAN.	
System Status		
Statistics	Click this link to view port status and packet specific statistics. See Section 3.1.1 on page 25.	
Client Information	Click this to see a list of wireless clients currently associated to each of the NWA's wireless modules. See Section 15.4 on page 119.	
View Log	Click this to see a list of logs produced by the NWA. See Chapter 14 on page 114.	

3.1.1 System Statistics Screen

Use this screen to view read-only information, including Wireless Mode, Channel ID, Retry Count and FCS Error Count. Also provided is the "poll interval". The **Poll Interval** field is configurable. The fields in this screen vary according to the current wireless mode of each WLAN adaptor.

Click **Status** > **Statistics**. The following screen pops up.

Figure 15 System Status: Statistics

The following table describes the labels in this screen.

Table 3 System Status: Statistics

LABEL	DESCRIPTION
Description	This is the NWA's wireless LAN module.
Wireless Mode	This field shows which wireless standard the NWA is using.
Channel ID	Click this to see which wireless channels are currently in use in the local area. See Section 15.5 on page 120.
RX PKT	This is the number of received packets on this port.

 Table 3
 System Status: Statistics (continued)

LABEL	DESCRIPTION
TX PKT	This is the number of transmitted packets on this port.
Retry Count	This is the total number of retries for transmitted packets (TX).
FCS Error Count	This is the ratio percentage showing the total number of checksum error of received packets (RX) over total RX.
Poll Interval	Enter the time interval for refreshing statistics.
Set Interval	Click this button to apply the new poll interval you entered above.
Stop	Click this button to stop refreshing statistics.

Tutorial

This chapter first provides an overview of how to configure the wireless LAN on your NWA, and then gives step-by-step guidelines showing how to configure your NWA for some example scenarios.

4.1 How to Configure the Wireless LAN

This section illustrates how to choose which wireless operating mode to use on the NWA and how to set up the wireless LAN in each wireless mode. See Section 4.1.3 on page 28 for links to more information on each step.

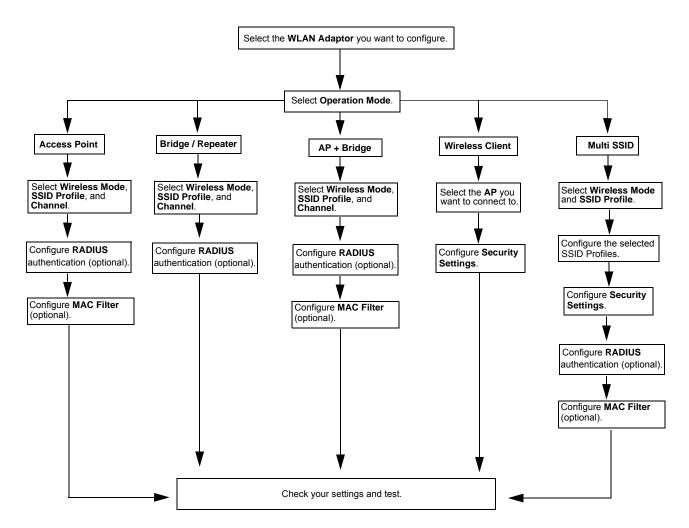

4.1.1 Choosing the Wireless Mode

- Use Access Point operating mode if you want to allow wireless clients to access your wired network, all using the same security and Quality of Service (QoS) settings. See Section 1.2.1 on page 12 for details.
- Use **Bridge / Repeater** operating mode if you want to use the NWA to communicate with other access points. See Section 1.2.2 on page 12 for details.
- Use AP + Bridge operating mode if you want to use the NWA as an access point (see above) while also communicating with other access points. See Section 1.2.3 on page 14 for details.
- Use **Wireless Client** operating mode if you want to use the NWA to access a wireless network. See Section 1.2.4 on page 15 for details.
 - The NWA is a bridge when other APs access your wired Ethernet network through the NWA.
- Use **Multi SSID** (Multiple Basic Service Set Identifier) operating mode if you want to use the NWA as an access point with some groups of users having different security or QoS settings from other groups of users. See Section 1.2.5 on page 16 for details.

4.1.2 Wireless LAN Configuration Overview

The following figure shows the steps you should take to configure the wireless settings according to the operating mode you select. Use the Web Configurator to set up your NWA's wireless network

(see your Quick Start Guide for information on setting up your NWA and accessing the Web Configurator).

4.1.3 Further Reading

Use these links to find more information on the steps:

- Selecting Operation Mode: see Section 5.4 on page 50.
- Choosing Wireless Mode: see Section 5.4 on page 50.
- Choosing a wireless Channel: see Section 5.4 on page 50.
- Choosing an SSID Profile: see Section 5.4 on page 50
- Choosing a **Security** mode: see Section 6.2 on page 67.
- Configuring an external **RADIUS** server: see Section 8.4 on page 85.
- Configuring MAC Filtering: see Section 9.4 on page 88.

4.2 How to Configure Multiple Wireless Networks

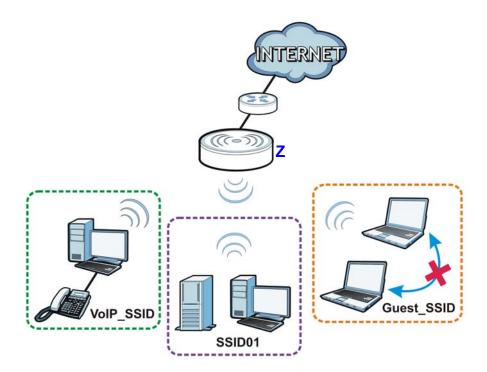

In this example, you have been using your NWA as an access point for your office network (See your Quick Start Guide for information on how to set up your NWA in Access Point mode). Now your network is expanding and you want to make use of the Multi-SSID feature (see Multi SSID on page 50) to provide multiple wireless networks. Each wireless network will cater to a different type of user.

You want to make three wireless networks: one standard office wireless network with all the same settings you already have, another wireless network with high priority QoS settings for Voice over IP (VoIP) users, and a guest network that prevents visitors in this network from communicating with one another.

To do this, you will take the following steps:

- 1 Edit the SSID profiles.
- 2 Change the operating mode from Access Point to Multi SSID and reactivate the standard network.
- **3** Configure different security modes for the networks.
- 4 Configure a wireless network for standard office use.
- **5** Configure a wireless network for VoIP users.
- **6** Configure a wireless network for guests to your office.

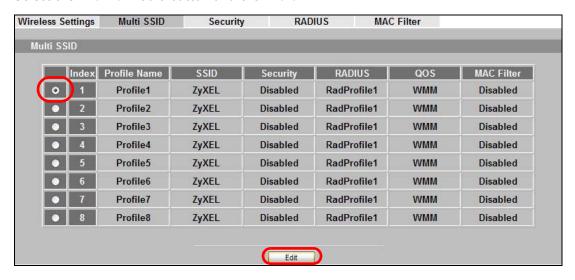

The following figure shows the multiple networks you want to set up. Your NWA is marked **Z**.

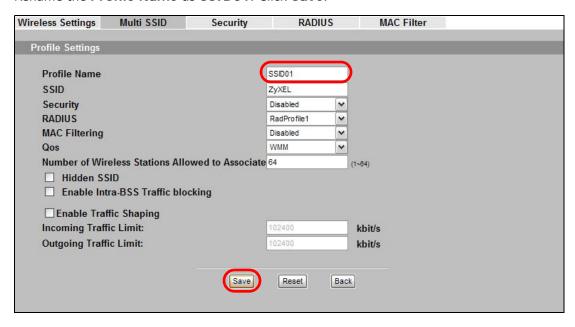

The standard network (**SSID01**) has access to all resources. The VoIP network (**VoIP_SSID**) has access to all resources and a high QoS priority. The guest network (**Guest_SSID**) has a low QoS priority and prevents visitors in this network from communicating with one another.

4.2.1 Configure the SSID Profiles

- 1 Log in to the NWA (see Section 2.1 on page 20). Click Wireless > Multi SSID. The Multi SSID screen appears.
- 2 Select the Profile1 radio button and click Edit.

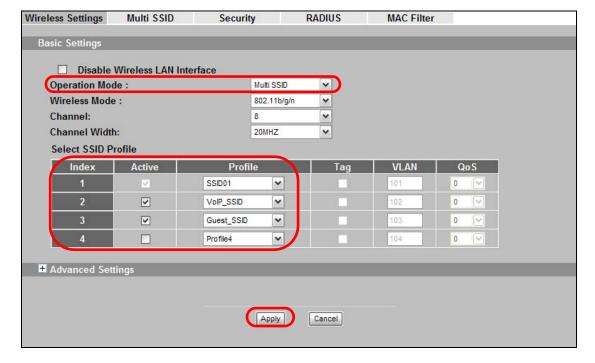

3 Rename the Profile Name as SSID01. Click Save.

4 Repeat Step 2 and 3 to change **Profile2** and **Profile3** to **VoIP_SSID** and **Guest_SSID**.

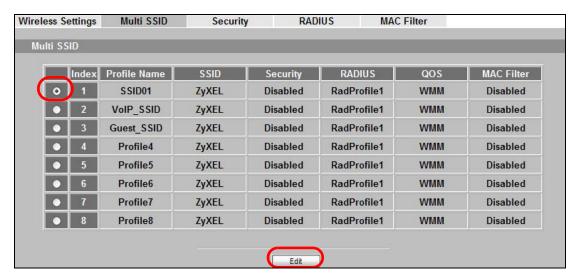

4.2.1.1 Multi SSID

- 1 Go to Wireless > Wireless Settings. Select Multi SSID from the Operating Mode drop-down list box.
- **2 SSID01** is the standard network, so select **SSID01** as the first profile. It is always active.
- 3 Select **VoIP_SSID** as the second profile, and **Guest_SSID** as the third profile. Select the corresponding **Active** check-boxes.
- 4 Click **Apply** to save your settings. Now the three SSIDs are activated.

4.2.2 Configure the Standard Network

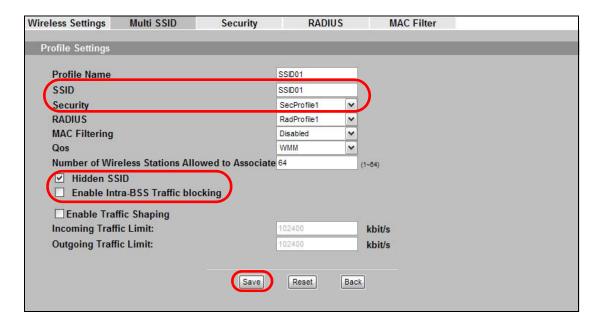

1 Click Wireless > Multi SSID. Select SSID01 and click Edit.

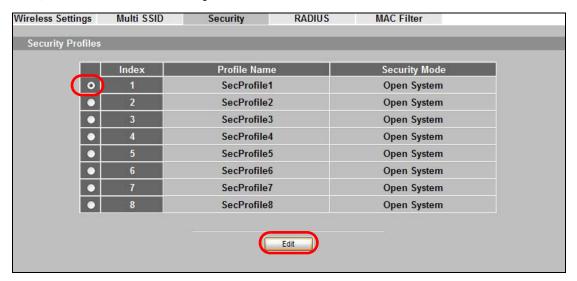

Set the SSID to **SSID01**. Select **SecProfile1** as **SSID01**'s security profile. Select the **Hidden SSID** checkbox as you want only authorized company employees to use this network, so there is no need to broadcast the SSID to wireless clients scanning the area.

Also, the clients on **SSID01** might need to access other clients on the same wireless network. Do not select the **Enable Intra-BSS Traffic blocking** check-box.

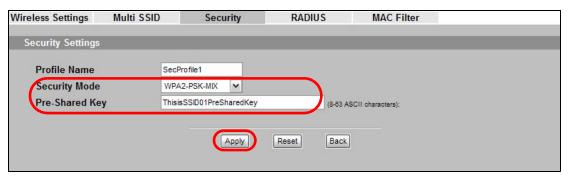

Click Save.

3 Next, click Wireless > Security. Select SecProfile1 and click Edit.

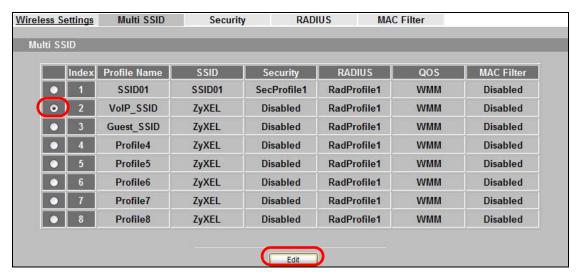

4 Since **SSID01** is the standard network that has access to all resources, assign a more secure security mode. Select **WPA2-PSK-MIX** as the **Security Mode**, and enter the **Pre-Shared Key**. In this example, use **ThisisSSID01PreSharedKey**. Click **Apply**.

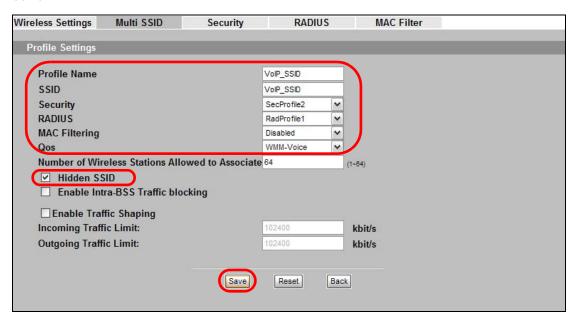

5 You have finished configuring the standard network, **SSID01**.

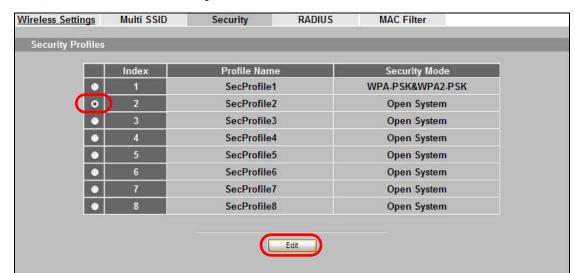

4.2.3 Configure the VoIP Network

1 Go to Wireless > SSID. Select VolP_SSID and click Edit.

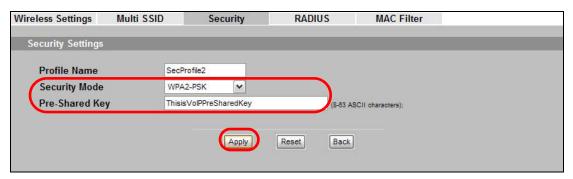

- 2 Set the SSID to VoIP_SSID. Select SecProfile2 as the Security Profile for the VoIP network. Select the Hidden SSID check-box.
- 3 Select WMM-Voice in the QoS field to give VoIP the highest priority in the wireless network. Click Save.

4 Next, click Wireless > Security. Select SecProfile2 and click Edit.

5 Select WPA2-PSK as the Security Mode, and enter the Pre-Shared Key. In this example, use ThisisVol PPreSharedKey. Click Apply.

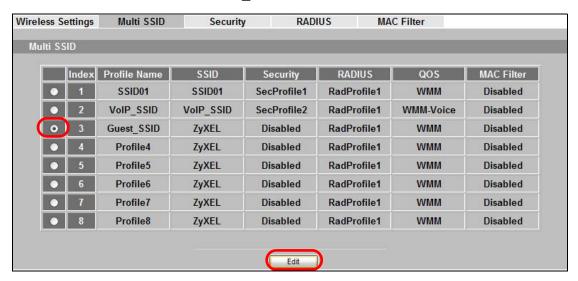

6 Your VoIP wireless network is now ready to use. Any traffic using the **VoIP_SSID** profile will be given the highest priority across the wireless network.

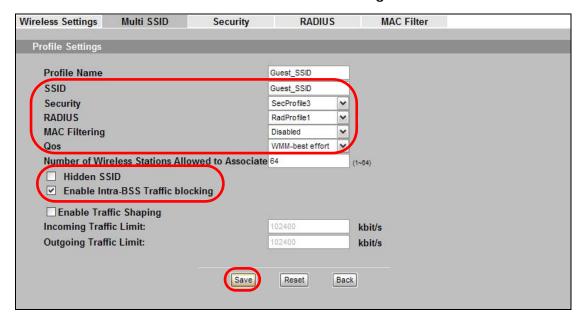

4.2.4 Configure the Guest Network

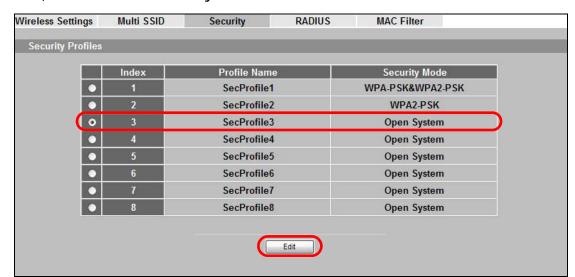

When you are setting up the wireless network for guests to your office, your primary concern is to keep your network secure. For this reason, the pre-configured **Guest_SSID** profile has intra-BSS traffic blocking enabled by default. "Intra-BSS traffic blocking" means that the client cannot access other clients on the same wireless network.

1 Click Wireless > SSID. Select Guest_SSID and click Edit.

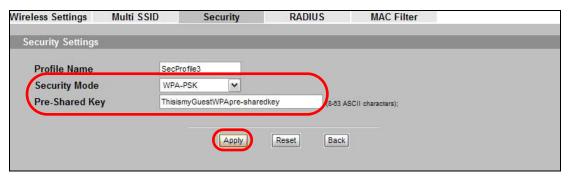

- 2 Set the SSID to **Guest_SSID**. Select **SecProfile3** in the **Security** field. Do not select the **Hidden SSID** check-box so the guests can easily find the wireless network.
- 3 Select WMM-best effort in the QoS field t
- 4 o give the guest a lower QoS priority.
- 5 Select the check-box of Enable Intra-BSS Traffic blocking. Click Save.

6 Next, click Wireless > Security. Select SecProfile3 and click Edit.

- 7 Select **WPA-PSK** in the **Security Mode** field. WPA-PSK provides strong security that is supported by most wireless clients.
- Enter the PSK you want to use in your network in the **Pre-Shared Key** field. In this example, the PSK is **ThisismyGuestWPApre-sharedkey**. Click **Apply**.

9 Your guest wireless network is now ready to use.

4.2.5 Testing the Wireless Networks

To make sure that the three networks are correctly configured, do the following.

- On a computer with a wireless client, scan for access points. You should see the Guest_SSID network, but not the SSID01 and VoIP_SSID networks. If you can see the SSID01 and VoIP_SSID networks, go to its SSID Edit screen and make sure to select the Hidden SSID check-box and click Save.
- Try to access each network using the correct security settings, and then using incorrect security settings, such as the WPA-PSK for another active network. If the behavior is different from expected (for example, if you can access the SSID01 or VoIP_SSID wireless network using the security settings for the Guest_SSID wireless network) check that the SSID profile is set to use the correct security profile, and that the settings of the security profile are correct.

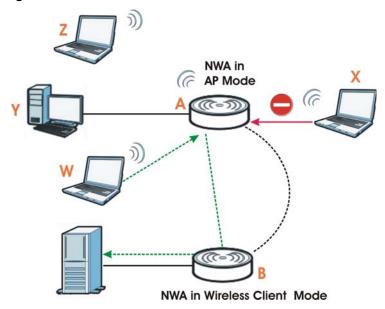

4.3 NWA Setup in AP and Wireless Client Modes

This example shows you how to restrict wireless access to your NWA.

4.3.1 Scenario

In the figure below, there are two NWAs (A and B) in the network. A is in Access Point (AP) mode while station B is in Wireless Client mode. Station B is connected to a File Transfer Protocol (FTP) server. You want only specified wireless clients to be able to access station B. You also want to allow wireless traffic between B and wireless clients connected to A (W, Y and Z). Other wireless devices (X) must not be able to connect to the FTP server.

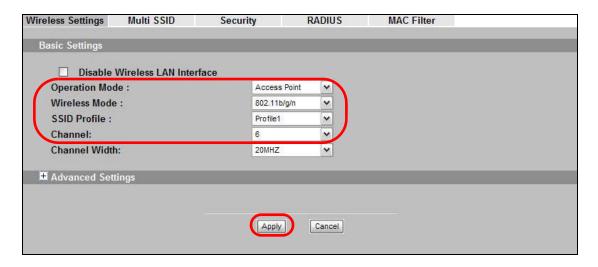

Figure 16 FTP Server Connected to a Wireless Client

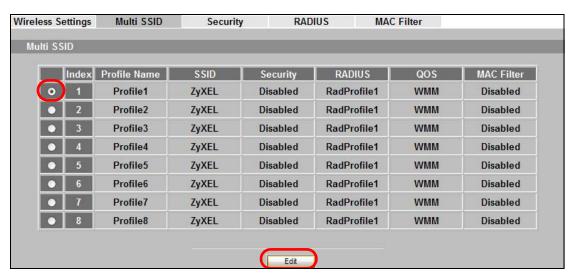

4.3.2 Configuring the NWA in Access Point Mode

Before setting up the NWA as a wireless client (B), you need to make sure there is an access point to connect to. Use the Ethernet port on NWA (A) to configure it via a wired connection.

Log into the Web Configurator on NWA (A) and go to the Wireless > Wireless Settings screen.

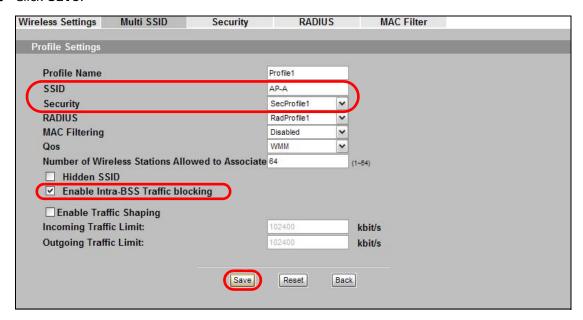

- 1 Set the Operation Mode to Access Point.
- 2 Select the Wireless Mode. In this example, select 802.11b/g/n.
- 3 Select Profile1 as the SSID Profile.
- 4 Choose the **Channel** you want NWA (A) to use.
- 5 Click Apply.
- 6 Go to Wireless > Multi SSID. Select Profile1 and click Edit.

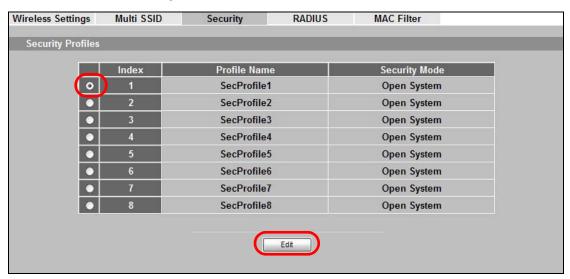

- 7 Change the **SSID** to **AP-A**.
- 8 Select **SecProfile1** in the **Security** field.
- 9 Select the check-box for **Enable Intra-BSS Traffic blocking** so the client cannot access other clients on the same wireless network.

10 Click Save.

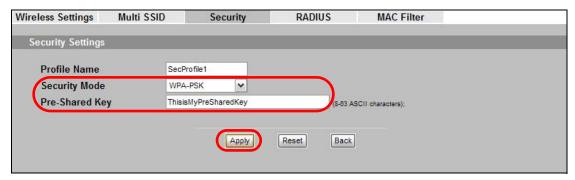

11 Go to Wireless > Security. Select SecProfile1. Click Edit.

12 Configure WPA-PSK as the Security Mode and enter ThisisMyPreSharedKey in the Pre-Shared Key field.

40

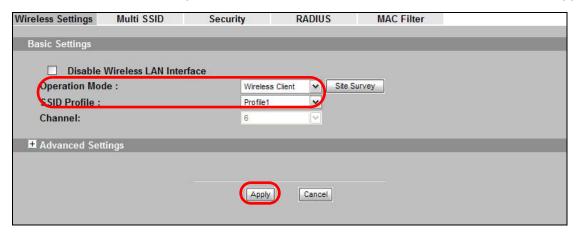

13 Click Apply to finish configuration for NWA (A).

4.3.3 Configuring the NWA in Wireless Client Mode

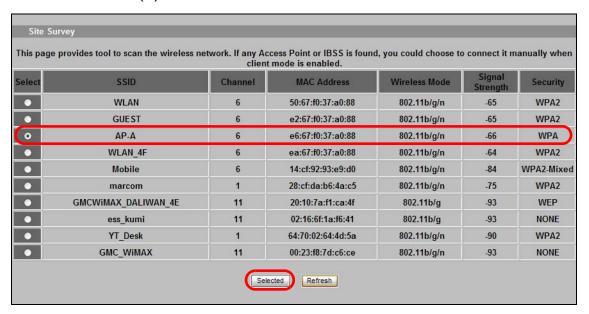

The NWA (B) should have a wired connection before it can be set to wireless client operating mode. Connect your NWA to the FTP server. Login to NWA (B)'s Web Configurator and go to the **Wireless** > **Wireless** Settings screen. Follow these steps to configure station B.

1 Select Wireless Client as Operation Mode. Select Profile1 as the SSID Profile. Click Apply.

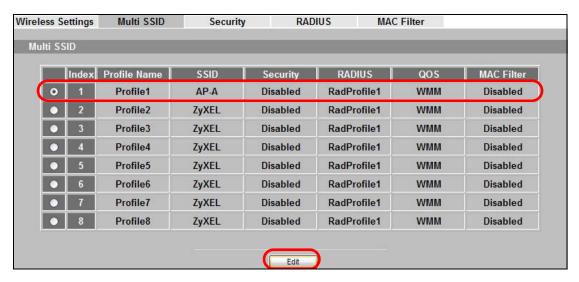

2 Click on the **Site Survey** tab. A window should pop up which contains a list of all available wireless devices within your NWA's range.

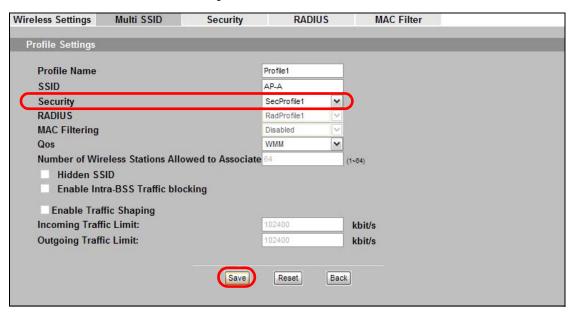

3 Find and select NWA (A)'s SSID: AP-A. Click Selected.

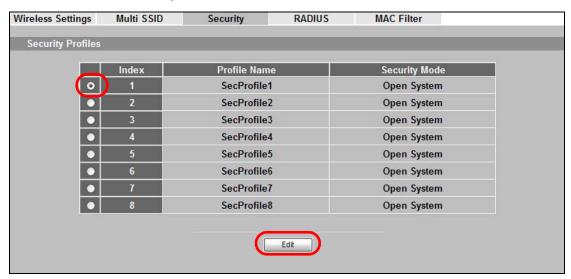

4 The NWA automatically uses the selected AP's SSID for **Profile 1**. Go to **Wireless > Multi SSID**. Select **Profile1** and click **Edit**.

5 Select SecProfile1 in the Security field. Click Save.

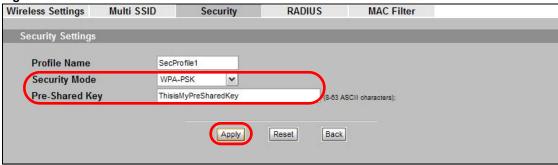

6 Go to Wireless > Security. Select SecProfile1. Click Edit.

7 Configure the NWA to use the same security mode and Pre-Shared Key as NWA (A): WPA-PSK/ ThisisMyPreSharedKey. Click Apply.

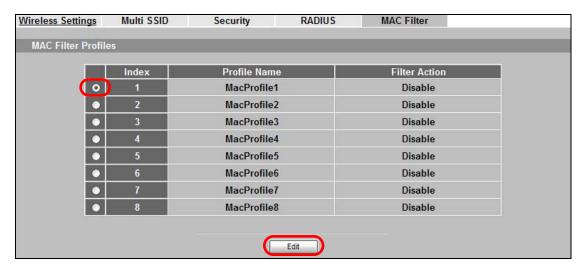

Figure 17

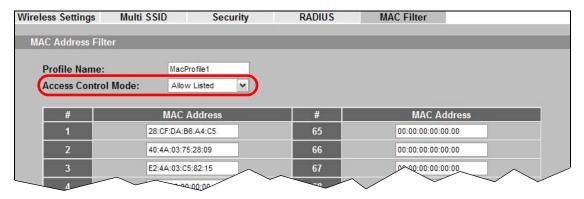

4.3.4 MAC Filter Setup

One way to ensure that only specified wireless clients can access the FTP server is by enabling MAC filtering on NWA (B) (See Chapter 9 on page 87 for more information on MAC Filter).

1 Go to Wireless > MAC Filter. Select MacProfile1 and click Edit.

2 Select Allow Listed in the Access Control Mode field. Enter the MAC addresses of the wireless clients (W, Y and Z) you want to associate with the NWA. Click Apply.

Now, only the authorized wireless clients (W, Y and Z) can access the FTP server.

4.3.5 Testing the Connection and Troubleshooting

This section discusses how you can check if you have correctly configured your network setup as described in this tutorial.

- Try accessing the FTP server from wireless clients **W**, **Y** or **Z**. Test if you can send or retrieve a file. If you cannot establish a connection with the FTP server, do the following steps.
- 1 Make sure W, Y and Z use the same wireless security settings as A and can access A.
- 2 Make sure B uses the same wireless and wireless security settings as A and can access A.

- 3 Make sure intra-BSS traffic is enabled on A.
 - Try accessing the FTP server from **X**. If you are able to access the FTP server, do the following.
- 1 Make sure MAC filtering is enabled.
- 2 Make sure X's MAC address is not entered in the list of allowed devices.

PART II Technical Reference

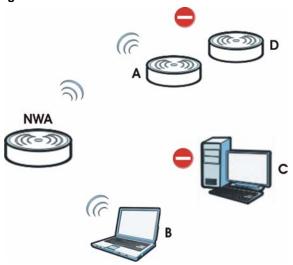

The appendices provide general information. Some details may not apply to your NWA.

Wireless Settings Screen

5.1 Overview

This chapter discusses the steps to configure the Wireless Settings screen on the NWA. It also introduces the wireless LAN (WLAN) and some basic scenarios.

Figure 18 Wireless Mode

In the figure above, the NWA allows access to another bridge device (A) and a notebook computer (B) upon verifying their settings and credentials. It denies access to other devices (C) and (D) with configurations that do not match those specified in your NWA.

5.2 What You Can Do in this Chapter

Use the **Wireless > Wireless Settings** screen to configure the NWA's operation mode (see Section 5.4 on page 50).

5.3 What You Need To Know

BSS

A Basic Service Set (BSS) exists when all communications between wireless clients or between a wireless client and a wired network client go through one access point (AP). Intra-BSS traffic is traffic between wireless clients in the BSS.

ESS

An Extended Service Set (ESS) consists of a series of overlapping BSSs, each containing an access point, with each access point connected together by a wired network. This wired connection between APs is called a Distribution System (DS).

Operating Mode

The NWA can run in four operating modes as follows:

- Access Point. The NWA is wireless access point that allows wireless communication to other devices in the network.
- Bridge/Repeater. The NWA acts as a wireless network bridge and establishes wireless links with other APs. You need to know the MAC address of the peer device, which also must be in bridge mode. The NWA can establish up to five wireless links with other APs.
- AP+Bridge. The NWA functions as a bridge and access point simultaneously.
- Wireless Client. The NWA acts as a wireless client to access a wireless network.
- Multi SSID. This mode allows you to use one access point to provide several BSSs simultaneously.

Refer to Chapter 1 on page 11 for illustrations of these wireless applications.

SSID

The SSID (Service Set IDentifier) identifies the Service Set with which a wireless station is associated. Wireless stations associating to the access point (AP) must have the same SSID.

Normally, the NWA acts like a beacon and regularly broadcasts the SSID in the area. You can hide the SSID instead, in which case the NWA does not broadcast the SSID. In addition, you should change the default SSID to something that is difficult to guess.

This type of security is fairly weak, however, because there are ways for unauthorized wireless devices to get the SSID. In addition, unauthorized wireless devices can still see the information that is sent in the wireless network.

Channel

A channel is the radio frequency(ies) used by IEEE 802.11a/b/g wireless devices. Channels available depend on your geographical area. You may have a choice of channels (for your region) so you should use a different channel than an adjacent AP (access point) to reduce interference.

Wireless Mode

The IEEE 802.1x standard was designed to extend the features of IEEE 802.11 to support extended authentication as well as providing additional accounting and control features. Your NWA can support 802.11b/g and 802.11b/g/n.

Multi SSID

Traditionally, you needed to use different APs to configure different Basic Service Sets (BSSs). As well as the cost of buying extra APs, there was also the possibility of channel interference. The NWA's multi-SSID function allows you to use one access point to provide several BSSs simultaneously. You can then assign varying levels of privilege to different SSIDs.

Wireless stations can use different SSIDs to associate with the same AP.

The following are some notes on multiple SSIDs.

- A maximum of four BSSs are allowed on one AP simultaneously.
- You must use different security settings for different BSSs. If two stations have different BSSIDs (they are in different BSSs), but have the same security settings, they may hear each other's communications (but not communicate with each other).
- Multi-SSID should not replace but rather be used in conjunction with 802.1x security.

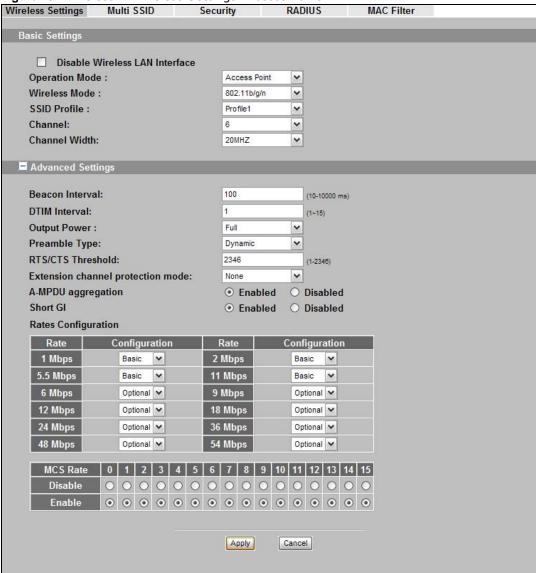

5.4 Wireless Settings Screen

Use this screen to choose the operating mode for your NWA. Click **Wireless > Wireless Settings**. The screen varies depending upon the operating mode you select.

5.4.1 Access Point Mode

Use this screen to use your NWA as an access point. Select **Access Point** as the **Operation Mode**. The following screen displays.

Figure 19 Wireless > Wireless Settings: Access Point

The following table describes the general wireless LAN labels in this screen.

Table 4 Wireless > Wireless Settings: Access Point

LABEL	DESCRIPTION
Basic Settings	
Disable Wireless LAN Interface	Select this option to turn off the wireless LAN.
Operation Mode	Select Access Point from the drop-down list.

Table 4 Wireless > Wireless Settings: Access Point (continued)

LABEL	DESCRIPTION
Wireless Mode	Select 802.11b/g to allow both IEEE802.11b and IEEE802.11g compliant WLAN devices to associate with the NWA. The transmission rate of your NWA might be reduced.
	Select 802.11b/g/n to allow IEEE802.11b, IEEE802.11g and IEEE802.11n compliant WLAN devices to associate with the Device. The transmission rate of the NWA might be reduced.
SSID Profile	The SSID (Service Set IDentifier) identifies the Service Set with which a wireless station is associated. Wireless stations associating to the access point (AP) must have the same SSID. Select an SSID Profile from the drop-down list box.
	Note: If you are configuring the NWA from a computer connected to the wireless LAN and you change the NWA's SSID or security settings, you will lose your wireless connection when you press Apply to confirm. You must then change the wireless settings of your computer to match the NWA's new settings.
Channel	Select the operating frequency/channel depending on your particular region from the drop-down list box.
Channel Width	This field displays only when you select 802.11 b/g/n in the 802.11 Wireless Mode field.
	A standard 20MHz channel offers transfer speeds of up to 150Mbps whereas a 40MHz channel uses two standard channels and offers speeds of up to 300Mbps. However, not all devices support 40MHz channels.
	Select the channel bandwidth you want to use for your wireless network.
	It is recommended that you select 20/40 (20/40 MHz). This allows the NWA to adjust the channel bandwidth depending on network conditions.
	Select 20 MHz if you want to lessen radio interference with other wireless devices in your neighborhood.
Advanced Settings	
Click + or - to disp	olay or hide the following fields.
Beacon Interval	When a wirelessly network device sends a beacon, it includes with it a beacon interval. This specifies the time period before the device sends the beacon again. The interval tells receiving devices on the network how long they can wait in lowpower mode before waking up to handle the beacon. A high value helps save current consumption of the access point.
DTIM Interval	Delivery Traffic Indication Message (DTIM) is the time period after which broadcast and multicast packets are transmitted to mobile clients in the Active Power Management mode. A high DTIM value can cause clients to lose connectivity with the network.
Output Power	Set the output power of the NWA in this field. If there is a high density of APs in an area, decrease the output power of the NWA to reduce interference with other APs. Select one of the following Full (Full Power), 50%, 25%, 12.5% or Min (Minimum). See the product specifications for more information on your NWA's output power.
Preamble Type	Select Dynamic to have the AP automatically use short preamble when wireless adapters support it, otherwise the AP uses long preamble.
	Select Long if you are unsure what preamble mode the wireless adapters support, and to provide more reliable communications in busy wireless networks.
RTS/CTS Threshold	(Request To Send) The threshold (number of bytes) for enabling RTS/CTS handshake. Data with its frame size larger than this value will perform the RTS/CTS handshake. Setting this attribute to be larger than the maximum MSDU (MAC service data unit) size turns off the RTS/CTS handshake. Setting this attribute to its smallest value (1) turns on the RTS/CTS handshake.
Fragmentation	The threshold (number of bytes) for the fragmentation boundary for directed messages. It is the maximum data fragment size that can be sent.

Table 4 Wireless > Wireless Settings: Access Point (continued)

LABEL	DESCRIPTION
A-MPDU aggregation	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to allow the grouping of several A-MSDUs (Aggregate MAC Service Data Units) into one large A-MPDU (Aggregate MAC Protocol Data Unit). This function allows faster data transfer rates.
Short GI	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to use Short GI (Guard Interval). The guard interval is the gap introduced between data transmission from users in order to reduce interference. Reducing the GI increases data transfer rates but also increases interference. Increasing the GI reduces data transfer rates but also reduces interference.
Rates Configuration	This section controls the data rates permitted for clients. For each Rate, select an option from the Configuration list. The options are: • Basic (1~11 Mbps only): Clients can always connect to the access point at this speed. • Optional: Clients can connect to the access point at this speed, when permitted to do so by the AP. • Disable: Clients cannot connect to the access point at this speed.
MCS Table	The MCS Rate table is available only when 802.11 b/g/n is selected in the 802.11 Wireless Mode field. IEEE 802.11n supports many different data rates which are called MCS rates. MCS stands for Modulation and Coding Scheme. This is an 802.11n feature that increases the wireless network performance in terms of throughput. For each MCS Rate (0-15), select either Enable (default) to have the NWA use the data rate. Select Disable if you do not want the NWA to use the data rate.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to begin configuring this screen afresh.

5.4.2 Bridge / Repeater Mode

Use this screen to have the NWA act as a wireless network bridge and establish wireless links with other APs. You need to know the MAC address of the peer device, which also must be in bridge mode.

Use this screen to use the NWA as a wireless bridge. Select **Bridge/Repeater** as the **Operation Mode**.

Figure 20 Wireless > Wireless Settings: Bridge/Repeater Wireless Settings Multi SSID Security RADIUS **MAC Filter** Basic Settings ■ Disable Wireless LAN Interface Operation Mode: Bridge/Repeater ~ ٧ Wireless Mode: 802.11b/g/n Channel: V **Channel Width:** 20MHZ ٧ WDS Settings Local MAC Address: Remote MAC Address 1 Remote MAC Address 2 Remote MAC Address 3 Remote MAC Address 4 ■ Enable WDS Security **Encryption Type** TKIP **AES Encryption Key** (8-63 ASCII characters); Advanced Settings **Output Power:** Full ٧ Preamble Type: Dynamic ٧ RTS/CTS Threshold: 2346 (1-2346) Extension channel protection mode: None ~ A-MPDU aggregation Enabled O Disabled Short GI Enabled O Disabled **Rates Configuration** Rate Configuration Rate Configuration 1 Mbps Basic ~ 2 Mbps Basic ~ 5.5 Mbps 11 Mbps ~ ٧ Basic Basic 6 Mbps 9 Mbps Optional 🕶 Optional 🕶 12 Mbps Optional 🕶 18 Mbps Optional 🕶 36 Mbps Optional 🕶 Optional 🕶 24 Mbps 48 Mbps Optional 🕶 54 Mbps Optional 🕶 MCS Rate 5 6 7 8 9 10 11 12 13 14 15 Enable

The following table describes the bridge labels in this screen.

 Table 5
 Wireless > Wireless Settings: Bridge/Repeater

LABEL	DESCRIPTIONS		
Basic Settings	Basic Settings		
Disable Wireless LAN Interface	Select this option to turn off the wireless LAN.		
Operation Mode	Select Bridge/Repeater in this field.		
Wireless Mode	Select 802.11b/g to allow both IEEE802.11b and IEEE802.11g compliant WLAN devices to associate with the NWA. The transmission rate of your NWA might be reduced.		
	Select 802.11b/g/n to allow IEEE802.11b, IEEE802.11g and IEEE802.11n compliant WLAN devices to associate with the NWA. The transmission rate of the NWA might be reduced.		
Channel	Select the operating frequency/channel depending on your particular region from the drop-down list box.		
Channel Width	This field displays only when you select 802.11 b/g/n in the 802.11 Wireless Mode field.		
	A standard 20MHz channel offers transfer speeds of up to 150Mbps whereas a 40MHz channel uses two standard channels and offers speeds of up to 300Mbps. However, not all devices support 40MHz channels.		
	Select the channel bandwidth you want to use for your wireless network.		
	It is recommended that you select 20/40 (20/40 MHz). This allows the NWA to adjust the channel bandwidth depending on network conditions.		
	Select 20 MHz if you want to lessen radio interference with other wireless devices in your neighborhood.		
WDS Settings			
Local Mac Address	A Wireless Distribution System is a wireless connection between two or more APs.		
Remote MAC Address 1 - 4	Note: WDS security is independent of the security settings between the NWA and any wireless clients.		
	Local MAC Address is the MAC address of your NWA. You can specify up to 4 remote devices' MAC addresses in this section.		
Enable WDS Security	Select this to turn on security for the NWA's Wireless Distribution System (WDS). A Wireless Distribution System is a wireless connection between two or more APs. If you do not select the check box, traffic between APs is not encrypted.		
	Note: WDS security is independent of the security settings between the NWA and any wireless clients.		
	When you enable WDS security, also do the following:		
	Select the type of security you want to use (TKIP or AES) to secure traffic on your WDS.		
	 Enter a pre-shared key (PSK) for access point(s) in your WDS. Configure WDS security and the relevant PSK in each of your other access point(s). 		
	Note: Other APs must use the same encryption method to enable WDS security.		

Table 5 Wireless > Wireless Settings: Bridge/Repeater (continued)

LABEL	DESCRIPTIONS
Encryption Type	This field is configurable only when you select Enable WDS Security.
	Select TKIP to enable Temporal Key Integrity Protocol (TKIP) security on your WDS. This option is compatible with other ZyXEL access points that support WDS security. Use this if the other access points on your network support WDS security but do not have an AES option.
	Note: Check your other AP's documentation to make sure it supports WDS security.
	Select AES to enable Advanced Encryption System (AES) security on your WDS. AES provides superior security to TKIP . Use AES if the other access points on your network support it for the WDS.
Encryption Key	Type a pre-shared key (PSK) from 8 to 63 case-sensitive ASCII characters (including spaces and symbols). You must also set the peer device to use the same pre-shared key.
Advanced Settings	
Click + or - to display	or hide the following fields.
Output Power	Set the output power of the NWA in this field. If there is a high density of APs in an area, decrease the output power of the NWA to reduce interference with other APs. Select one of the following Full (Full Power), 50% , 25% , 12.5% or Min (Minimum). See the product specifications for more information on your NWA's output power.
Preamble Type	Select Dynamic to have the AP automatically use short preamble when wireless adapters support it, otherwise the AP uses long preamble.
	Select Long if you are unsure what preamble mode the wireless adapters support, and to provide more reliable communications in busy wireless networks.
RTS/CTS Threshold	(Request To Send) The threshold (number of bytes) for enabling RTS/CTS handshake. Data with its frame size larger than this value will perform the RTS/CTS handshake. Setting this attribute to be larger than the maximum MSDU (MAC service data unit) size turns off the RTS/CTS handshake. Setting this attribute to its smallest value (1) turns on the RTS/CTS handshake.
Fragmentation	The threshold (number of bytes) for the fragmentation boundary for directed messages. It is the maximum data fragment size that can be sent.
A-MPDU aggregation	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to allow the grouping of several A-MSDUs (Aggregate MAC Service Data Units) into one large A-MPDU (Aggregate MAC Protocol Data Unit). This function allows faster data transfer rates.
Short GI	This field is available only when 802.11 b/g/n is selected as the Wireless Mode. Select Enable to use Short GI (Guard Interval). The guard interval is the gap introduced between data transmission from users in order to reduce interference. Reducing the GI increases data transfer rates but also increases interference. Increasing the GI reduces data transfer rates but also reduces interference.
Rates Configuration	This section controls the data rates permitted for clients.
	For each Rate, select an option from the Configuration list. The options are:
	• Basic (1~11 Mbps only): Clients can always connect to the access point at this speed.
	• Optional : Clients can connect to the access point at this speed, when permitted to do so by the AP.
	Disable: Clients cannot connect to the access point at this speed.

 Table 5
 Wireless > Wireless Settings: Bridge/Repeater (continued)

LABEL	DESCRIPTIONS
MCS Table	The MCS Rate table is available only when 802.11 b/g/n is selected in the 802.11 Wireless Mode field.
	IEEE 802.11n supports many different data rates which are called MCS rates. MCS stands for Modulation and Coding Scheme. This is an 802.11n feature that increases the wireless network performance in terms of throughput.
	For each MCS Rate (0-15), select either Enable (default) to have the NWA use the data rate. Select Disable if you do not want the NWA to use the data rate.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to begin configuring this screen afresh.

5.4.3 AP + Bridge Mode

Use this screen to have the NWA function as a bridge and access point simultaneously. Select **AP+Bridge** as the **Operation Mode**. The following screen displays.

Figure 21 Wireless > Wireless Settings: AP+Bridge

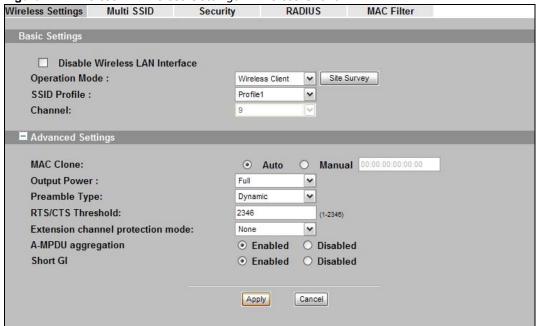

See the tables describing the fields in the **Access Point** and **Bridge / Repeater** operating modes for descriptions of the fields in this screen.

58

5.4.4 Wireless Client Mode

Use this screen to turn your NWA into a wireless client. Select **Wireless Client** as the **Operation Mode**. The following screen displays.

Figure 22 Wireless > Wireless Settings: Wireless Client

The following table describes the general wireless LAN labels in this screen.

Table 6 Wireless > Wireless Settings: Wireless Client

LABEL	DESCRIPTION	
Basic Settings	Basic Settings	
Disable Wireless LAN Interface	Select this option to turn off the wireless LAN.	
Operation Mode	Select Wireless Client in this field.	
Site Survey	Click this to view a list of available wireless access points within the range. Select the AP you want to use and click Selected .	
	Note: After selecting Wireless Client as the Operation Mode in the Basic Settings section, you must click Apply to be able to select from the AP list.	
SSID Profile	Select an SSID Profile from the drop-down list box. The SSID profile defines the SSID and security settings you want to use to set up a wireless network or connect to a wireless device.	
Channel	This shows the operating frequency/channel in use. This field is read-only when you select Wireless Client as your operation mode.	
Advanced Settings		
MAC Clone	Choose Manual to configure the NWA's MAC address by cloning the MAC address from a computer on your LAN. Choose Auto to use the factory default MAC address of your NWA.	
Output Power	Set the output power of the NWA in this field. If there is a high density of APs in an area, decrease the output power of the NWA to reduce interference with other APs. Select one of the following Full (Full Power), 50%, 25%, 12.5% or Min (Minimum). See the product specifications for more information on your NWA's output power.	

 Table 6
 Wireless > Wireless Settings: Wireless Client (continued)

LABEL	DESCRIPTION
Preamble Type	Select Dynamic to have the NWA automatically use short preamble when the wireless network your NWA is connected to supports it, otherwise the NWA uses long preamble.
	Select Long preamble if you are unsure what preamble mode the wireless device your NWA is connected to supports, and to provide more reliable communications in busy wireless networks.
RTS/CTS Threshold	(Request To Send) The threshold (number of bytes) for enabling RTS/CTS handshake. Data with its frame size larger than this value will perform the RTS/CTS handshake. Setting this attribute to be larger than the maximum MSDU (MAC service data unit) size turns off the RTS/CTS handshake. Setting this attribute to its smallest value (1) turns on the RTS/CTS handshake.
Extension channel protection mode	You can use CTS to self or RTS-CTS protection mechanism to reduce conflicts with other wireless networks or hidden wireless clients. The throughput of RTS-CTS is much lower than CTS to self. Using this mode may decrease your wireless performance.
A-MPDU aggregation	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to allow the grouping of several A-MSDUs (Aggregate MAC Service Data Units) into one large A-MPDU (Aggregate MAC Protocol Data Unit). This function allows faster data transfer rates.
Short GI	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to use Short GI (Guard Interval). The guard interval is the gap introduced between data transmission from users in order to reduce interference. Reducing the GI increases data transfer rates but also increases interference. Increasing the GI reduces data transfer rates but also reduces interference.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to begin configuring this screen afresh.

5.4.5 Multi SSID Mode

Use this screen to have the NWA function in **Multi SSID** mode. Select **Multi SSID** as the **Operating Mode**. The following screen diplays.

Figure 23 Wireless > Wireless Settings: Multi SSID

The following table describes the labels in this screen.

 Table 7
 Wireless > Wireless Settings: Multi SSID

LABEL	DESCRIPTION
Disable Wireless LAN Interface	Select this option to turn off the wireless LAN.
Operating Mode	Select Multi SSID in this field.
Wireless Mode	Select 802.11b/g to allow both IEEE802.11b and IEEE802.11g compliant WLAN devices to associate with the NWA. The transmission rate of your NWA might be reduced.
	Select 802.11b/g/n to allow IEEE802.11b, IEEE802.11g and IEEE802.11n compliant WLAN devices to associate with the NWA. The transmission rate of the NWA might be reduced.
Channel	Select the operating frequency/channel depending on your particular region from the drop-down list box.
Channel Width	This field displays only when you select 802.11 b/g/n in the 802.11 Wireless Mode field.
	A standard 20MHz channel offers transfer speeds of up to 150Mbps whereas a 40MHz channel uses two standard channels and offers speeds of up to 300Mbps. However, not all devices support 40MHz channels.
	Select the channel bandwidth you want to use for your wireless network.
	It is recommended that you select 20/40 (20/40 MHz). This allows the NWA to adjust the channel bandwidth depending on network conditions.
	Select 20 MHz if you want to lessen radio interference with other wireless devices in your neighborhood.
Select SSID Profile	An SSID profile is the set of parameters relating to one of the NWA's BSSs. The SSID (Service Set IDentifier) identifies the Service Set with which a wireless station is associated. Wireless stations associating with the access point (AP) must have the same SSID.
	If you are configuring the NWA from a computer connected to the wireless LAN and you change the NWA's SSID or security settings, you will lose your wireless connection when you press Apply to confirm. You must then change the wireless settings of your computer to match the NWA's new settings.
Index	Select the check box to activate an SSID profile.
Active	Select the check box to enable the bridge connection. Otherwise, clear the check box to disable it. The first profile is always active.
Profile	Select the profile(s) of the SSIDs you want to use in your wireless network. You can have up to four BSSs running on the NWA simultaneously.
	Configure SSID profiles in the Multi SSID screen.
Tag	This displays whether traffic from this SSID is tagged with the VLAN ID.
	This field is configurable only when you enable 802.1Q VLAN tagging in the System > General screen.
	Select the check box to enable VLAN tagging for this SSID.
VLAN	This displays the VLAN ID associated with the SSID.
	This field is configurable only when you enable 802.1Q VLAN tagging in the System > General screen and select the Tag check box in this screen.
	Enter a VLAN ID number from 1 to 4094. Packets coming from the WLAN using this SSID profile are tagged with the VLAN ID number by the NWA. Different BSSID profiles can use the same or different VLAN IDs. This allows you to split wireless stations into groups using similar VLAN IDs.

Table 7 Wireless > Wireless Settings: Multi SSID (continued)

LABEL	DESCRIPTION
QoS	This displays the QoS priority level associated with the SSID.
	This field is configurable only when you enable 802.1Q VLAN tagging in the System > General screen and select the Tag check box in this screen.
	Select the Quality of Service priority for this BSS's traffic.
Advanced Settings	
Beacon Interval	When a wirelessly networked device sends a beacon, it includes with it a beacon interval. This specifies the time period before the device sends the beacon again. The interval tells receiving devices on the network how long they can wait in lowpower mode before waking up to handle the beacon. A high value helps save current consumption of the access point.
DTIM Interval	Delivery Traffic Indication Message (DTIM) is the time period after which broadcast and multicast packets are transmitted to mobile clients in the Active Power Management mode. A high DTIM value can cause clients to lose connectivity with the network.
Output Power	Set the output power of the NWA in this field. If there is a high density of APs in an area, decrease the output power of the NWA to reduce interference with other APs. Select one of the following Full (Full Power), 50% , 25% , 12.5% or Min (Minimum). See the product specifications for more information on your NWA's output power.
Preamble Type	Select Dynamic to have the AP automatically use short preamble when wireless adapters support it, otherwise the AP uses long preamble.
	Select Long if you are unsure what preamble mode the wireless adapters support, and to provide more reliable communications in busy wireless networks.
RTS/CTS Threshold	(Request To Send) The threshold (number of bytes) for enabling RTS/CTS handshake. Data with its frame size larger than this value will perform the RTS/CTS handshake. Setting this attribute to be larger than the maximum MSDU (MAC service data unit) size turns off the RTS/CTS handshake. Setting this attribute to its smallest value (1) turns on the RTS/CTS handshake.
Extension channel protection mode	You can use CTS to self or RTS-CTS protection mechanism to reduce conflicts with other wireless networks or hidden wireless clients. The throughput of RTS-CTS is much lower than CTS to self. Using this mode may decrease your wireless performance.
A-MPDU aggregation	This field is available only when 802.11 b/g/n is selected as the Wireless Mode . Select Enable to allow the grouping of several A-MSDUs (Aggregate MAC Service Data Units) into one large A-MPDU (Aggregate MAC Protocol Data Unit). This function allows faster data transfer rates.
Short GI	This field is available only when 802.11 b/g/n is selected as the Wireless Mode. Select Enable to use Short GI (Guard Interval). The guard interval is the gap introduced between data transmission from users in order to reduce interference. Reducing the GI increases data transfer rates but also increases interference. Increasing the GI reduces data transfer rates but also reduces interference.
Rates Configuration	This section controls the data rates permitted for clients.
	For each Rate, select an option from the Configuration list. The options are:
	Basic (1~11 Mbps only): Clients can always connect to the access point at this speed.
	Optional: Clients can connect to the access point at this speed, when permitted to do so by the AP.
	Disable: Clients cannot connect to the access point at this speed.

Table 7 Wireless > Wireless Settings: Multi SSID (continued)

LABEL	DESCRIPTION
MCS Table	The MCS Rate table is available only when 802.11 b/g/n is selected in the 802.11 Wireless Mode field.
	IEEE 802.11n supports many different data rates which are called MCS rates. MCS stands for Modulation and Coding Scheme. This is an 802.11n feature that increases the wireless network performance in terms of throughput.
	For each MCS Rate (0-15), select either Enable (default) to have the NWA use the data rate. Select Disable if you do not want the NWA to use the data rate.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to begin configuring this screen afresh.

5.5 Technical Reference

This section provides technical background information about the topics covered in this chapter. Refer to Appendix D on page 177 for further readings on Wireless LAN.

5.5.1 WMM QoS

WMM (Wi-Fi MultiMedia) QoS (Quality of Service) ensures quality of service in wireless networks. It controls WLAN transmission priority on packets to be transmitted over the wireless network.

WMM QoS prioritizes wireless traffic according to the delivery requirements of the individual and applications. WMM QoS is a part of the IEEE 802.11e QoS enhancement to certified Wi-Fi wireless networks.

On APs without WMM QoS, all traffic streams are given the same access priority to the wireless network. If the introduction of another traffic stream creates a data transmission demand that exceeds the current network capacity, then the new traffic stream reduces the throughput of the other traffic streams.

The NWA uses WMM QoS to prioritize traffic streams according to the IEEE 802.1q or DSCP information in each packet's header. The NWA automatically determines the priority to use for an individual traffic stream. This prevents reductions in data transmission for applications that are sensitive to latency and jitter (variations in delay).

5.5.2 Additional Wireless Terms

Table 8 Additional Wireless Terms

TERM	DESCRIPTION
Intra-BSS Traffic	This describes direct communication (not through the NWA) between two wireless devices within a wireless network. You might disable this kind of communication to enhance security within your wireless network.
RTS/CTS Threshold	In a wireless network which covers a large area, wireless devices are sometimes not aware of each other's presence. This may cause them to send information to the AP at the same time and result in information colliding and not getting through.
	By setting this value lower than the default value, the wireless devices must sometimes get permission to send information to the NWA. The lower the value, the more often the devices must get permission.
	If this value is greater than the fragmentation threshold value (see below), then wireless devices never have to get permission to send information to the NWA.
Preamble	A preamble affects the timing in your wireless network. There are two preamble modes: long and short. If a device uses a different preamble mode than the NWA does, it cannot communicate with the NWA.
Fragmentation Threshold	A small fragmentation threshold is recommended for busy networks, while a larger threshold provides faster performance if the network is not very busy.
Roaming	If you have two or more NWAs (or other wireless access points) on your wireless network, you can enable this option so that wireless devices can change locations without having to log in again. This is useful for devices, such as notebooks, that move around a lot.
Antenna	An antenna couples Radio Frequency (RF) signals onto air. A transmitter within a wireless device sends an RF signal to the antenna, which propagates the signal through the air. The antenna also operates in reverse by capturing RF signals from the air.
	Positioning the antennas properly increases the range and coverage area of a wireless LAN.

Multi SSID Screen

6.1 Overview

This chapter describes how you can configure Service Set Identifier (SSID) profiles in your NWA.

Figure 24 Sample SSID Profiles

In the figure above, the NWA has three SSID profiles configured: a standard profile (SSID01), a profile with high QoS settings for Voice over IP (VoIP) users (VoIP_SSID), and a guest profile that prevents visitors in this network from communicating with one another (Guest_SSID).

6.1.1 What You Can Do in this Chapter

Use the **Wireless** > **Multi SSID** screen to configure up to eight SSID profiles for your NWA (see Section 6.2 on page 67).

6.1.2 What You Need To Know

The following terms and concepts may help as you read through this chapter.

When the NWA is set to Access Point, AP + Bridge or MBSSID mode, you need to choose the SSID profile(s) you want to use in your wireless network (see Section 5.4 on page 50 for more information on operating modes).

To configure the settings of your SSID profile, you need to know the Media Access Control (MAC) addresses of the devices you want to allow access to it.

Each SSID profile references the settings configured in the following screens:

- Wireless > Security (one of the security profiles)
- Wireless > RADIUS (one of the RADIUS profiles)
- Wireless > MAC Filter (the MAC filter list, if activated in the SSID profile)

Configure the fields in the above screens to use the settings in an SSID profile.

6.2 The Multi SSID Screen

Use this screen to select the SSID profile you want to configure. Click **Wireless** > **Multi SSID** to display the screen as shown.

Figure 25 Wireless > Multi SSID

The following table describes the labels in this screen.

Figure 26 Wireless > Multi SSID

<u> </u>	
LABEL	DESCRIPTION
Multi SSID	
Index	This field displays the index number of each SSID profile.
Profile Name	This field displays the identification name of each SSID profile on the NWA.
SSID	This field displays the name of the wireless profile on the network. When a wireless client scans for an AP to associate with, this is the name that is broadcast and seen in the wireless client utility.
Security	This field indicates which security profile is currently associated with each SSID profile. See Section 7.4.1 on page 75 for more information.

Figure 26 Wireless > Multi SSID (continued)

	,
LABEL	DESCRIPTION
RADIUS	This field displays which RADIUS profile is currently associated with each SSID profile, if you have a RADIUS server configured.
QoS	This field displays the Quality of Service setting for this profile or NONE if QoS is not configured on a profile.
MAC Filter	This field displays which MAC filter profile is currently associated with each SSID profile, or Disable if MAC filtering is not configured on an SSID profile.
Edit	Click the radio button next to the profile you want to configure and click Edit to go to the SSID configuration screen.

6.2.1 Configuring SSID

Use this screen to configure an SSID profile. In the **Wireless > Multi SSID** screen, select an SSID profile and click **Edit** to display the following screen.

Figure 27 Multi SSID: Edit

The following table describes the labels in this screen.

Table 9 Multi SSID: Edit

LABEL	DESCRIPTION
Profile Name	This is the name that identifying this profile.
SSID	When a wireless client scans for an AP to associate with, this is the name that is broadcast and seen in the wireless client utility.
Security	Select a security profile to use with this SSID profile. See Section 7.4.1 on page 75 for more information.
RADIUS	Select a RADIUS profile from the drop-down list box, if you have a RADIUS server configured. If you do not need to use RADIUS authentication, ignore this field. See Section 8.4 on page 85 for more information.
MAC Filtering	Select a MAC filter profile from the drop-down list box. If you do not want to use MAC filtering on this profile, select Disable .

Table 9 Multi SSID: Edit (continued)

LABEL	DESCRIPTION
QoS	Select the Quality of Service priority for this BSS's traffic.
	• If you select WMM from the QoS list, the priority of a data packet depends on the packet's IEEE 802.1q or DSCP header. If a packet has no WMM value assigned to it, it is assigned the default priority.
	If you select WMM_VOICE, WMM_VIDEO, WMM_BEST_EFFORT or WMM_BACKGROUND, the NWA applies that QoS setting to all of that SSID's traffic.
	If you select None , the NWA applies no priority to traffic on this SSID.
	Note: When you configure an SSID profile's QoS settings, the NWA applies the same QoS setting to all of the profile's traffic.
Number of Wireless Stations Allowed to Associate	Use this field to set a maximum number of wireless stations that may connect to the device.
Hidden SSID	If you do not select the checkbox, the NWA to broadcast this SSID (a wireless client scanning for an AP will find this SSID). Alternatively, if you select the checkbox, the NWA hide this SSID (a wireless client scanning for an AP will not find this SSID).
Enable Intra-BSS Traffic blocking	Select the checkbox to prevent wireless clients in this profile's BSS from communicating with one another.
Enable Traffic Shaping	Bursty traffic may cause network congestion. Traffic shaping regulates packets to be transmitted with a pre-configured data transmission rate using buffers (or queues).
Incoming Traffic Limit	Specify the maximum transmission rate (in kbps) allowed for incoming traffic.
Outgoing Traffic Limit:	Specify the maximum transmission rate (in kbps) allowed for outgoing traffic.
Save	Click Save to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

6.3 Technical Reference

This section provides technical background information about the topics covered in this chapter.

6.3.1 WMM QoS

WMM (Wi-Fi MultiMedia) QoS (Quality of Service) ensures quality of service in wireless networks. It controls WLAN transmission priority on packets to be transmitted over the wireless network.

WMM QoS prioritizes wireless traffic according to the delivery requirements of the individual and applications. WMM QoS is a part of the IEEE 802.11e QoS enhancement to certified Wi-Fi wireless networks.

On APs without WMM QoS, all traffic streams are given the same access priority to the wireless network. If the introduction of another traffic stream creates a data transmission demand that exceeds the current network capacity, then the new traffic stream reduces the throughput of the other traffic streams.

The NWA uses WMM QoS to prioritize traffic streams according to the IEEE 802.1q or DSCP information in each packet's header. The NWA automatically determines the priority to use for an

individual traffic stream. This prevents reductions in data transmission for applications that are sensitive to latency and jitter (variations in delay).

6.3.1.1 WMM QoS Priorities

The following table describes the WMM QoS priority levels that the NWA uses.

Table 10 WMM QoS Priorities

Priority Level	description
voice	Typically used for traffic that is especially sensitive to jitter. Use this priority to
(WMM_VOICE)	reduce latency for improved voice quality.
video	Typically used for traffic which has some tolerance for jitter but needs to be
(WMM_VIDEO)	prioritized over other data traffic.
best effort	Typically used for traffic from applications or devices that lack QoS capabilities. Use
(WMM_BEST_EFFORT)	best effort priority for traffic that is less sensitive to latency, but is affected by long delays, such as Internet surfing.
background	This is typically used for non-critical traffic such as bulk transfers and print jobs
(WMM_BACKGROUND)	that are allowed but that should not affect other applications and users. Use background priority for applications that do not have strict latency and throughput requirements.

6.3.2 Type Of Service (ToS)

Network traffic can be classified by setting the ToS (Type Of Service) values at the data source (for example, at the NWA) so a server can decide the best method of delivery, that is the least cost, fastest route and so on.

6.3.2.1 ToS (Type of Service) and WMM QoS

The DSCP value of outgoing packets is between 0 and 255. 0 is the default priority. WMM QoS checks the DSCP value in the header of data packets. It gives the traffic a priority according to this number.

In order to control which priority level is given to traffic, the device sending the traffic must set the DSCP value in the header. If the DSCP value is not specified, then the traffic is treated as best-effort. This means the wireless clients and the devices with which they are communicating must both set the DSCP value in order to make the best use of WMM QoS. A Voice over IP (VoIP) device for example may allow you to define the DSCP value.

The following table lists which WMM QoS priority level the NWA uses for specific DSCP values.

Table 11 ToS and IEEE 802.1d to WMM QoS Priority Level Mapping

Dscp Value	WMM qos Priority Level
224, 192	voice
160, 128	video
96, 0 ^A	besteffort
64, 32	background

A. The NWA also uses best effort for any DSCP value for which another WMM QoS priority is not specified (255, 158 or 37 for example).

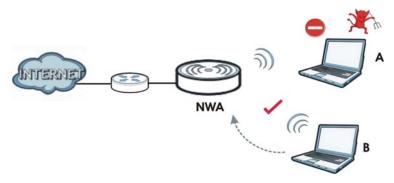

Wireless Security Screen

7.1 Overview

This chapter describes how to use the **Wireless Security** screen. This screen allows you to configure the security mode for your NWA.

Wireless security is vital to your network. It protects communications between wireless stations, access points and the wired network.

Figure 28 Securing the Wireless Network

In the figure above, the NWA checks the identity of devices before giving them access to the network. In this scenario, Computer $\bf A$ is denied access to the network, while Computer $\bf B$ is granted connectivity.

The NWA secure communications via data encryption, wireless client authentication and MAC address filtering. It can also hide its identity in the network.

7.2 What You Can Do in this Chapter

Use the **Wireless** > **Security** screen to choose the security mode for your NWA (see Section 7.4 on page 73).

7.3 What You Need To Know

User Authentication

Authentication is the process of verifying whether a wireless device is allowed to use the wireless network. You can make every user log in to the wireless network before they can use it. However, every device in the wireless network has to support IEEE 802.1x to do this.

For wireless networks, you can store the user names and passwords for each user in a RADIUS server. This is a server used in businesses more than in homes. If you do not have a RADIUS server, you cannot set up user names and passwords for your users.

Unauthorized wireless devices can still see the information that is sent in the wireless network, even if they cannot use the wireless network. Furthermore, there are ways for unauthorized wireless users to get a valid user name and password. Then, they can use that user name and password to use the wireless network.

The following table shows the relative effectiveness of wireless security methods:.

Table 12 Wireless Security Levels

SECURITY LEVEL	SECURITY TYPE
Least	Unique SSID (Default)
Secure	Unique SSID with Hide SSID Enabled
	MAC Address Filtering
	WEP Encryption
	IEEE802.1x EAP with RADIUS Server Authentication
	Wi-Fi Protected Access (WPA)
Most Secure	WPA2

The available security modes in your NWA are as follows:

- None. No data encryption.
- **WEP**. Wired Equivalent Privacy (WEP) encryption scrambles the data transmitted between the wireless stations and the access points to keep network communications private.
- 802.1x-Only. This is a standard that extends the features of IEEE 802.11 to support extended authentication. It provides additional accounting and control features. This option does not support data encryption.
- **802.1x-Static64**. This provides 802.1x-Only authentication with a static 64bit WEP key and an authentication server.
- 802.1x-Static128. This provides 802.1x-Only authentication with a static 128bit WEP key and an authentication server.
- 802.1x-Static152. This provides 802.1x-Only authentication with a static 152bit WEP key and an authentication server.
- WPA. Wi-Fi Protected Access (WPA) is a subset of the IEEE 802.11i standard.
- WPA2. WPA2 (IEEE 802.11i) is a wireless security standard that defines stronger encryption, authentication and key management than WPA.
- WPA2-MIX. This commands the NWA to use either WPA2 or WPA depending on which security
 mode the wireless client uses.

- WPA2-PSK. This adds a pre-shared key on top of WPA2 standard.
- WPA2-PSK-MIX. This commands the NWA to use either WPA-PSK or WPA2-PSK depending on which security mode the wireless client uses.

Note: In **Bridge/Repeater** and **AP+Bridge** operating modes, the only available security modes are **WEP**, **WPA-PSK**, and **WPA2-PSK**.

Note: To guarantee 802.11n wireless speed, please only use WPA2 or WPA2-PSK security mode. Other security modes may degrate the wireless speed performance to 802.11g.

Passphrase

A passphrase functions like a password. In WEP security mode, it is further converted by the NWA into a complicated string that is referred to as the "key". This key is requested from all devices wishing to connect to a wireless network.

PSK

The Pre-Shared Key (PSK) is a password shared by a wireless access point and a client during a previous secure connection. The key can then be used to establish a connection between the two parties.

Encryption

Wireless networks can use encryption to protect the information that is sent in the wireless network. Encryption is like a secret code. If you do not know the secret code, you cannot understand the message. Encryption is the process of converting data into unreadable text. This secures information in network communications. The intended recipient of the data can "unlock" it with a pre-assigned key, making the information readable only to him. The NWA when used as a wireless client employs Temporal Key Integrity Protocol (TKIP) data encryption.

EAP

Extensible Authentication Protocol (EAP) is a protocol used by a wireless client, an access point and an authentication server to negotiate a connection.

The EAP methods employed by the NWA when in Wireless Client operating mode are Transport Layer Security (TLS), Protected Extensible Authentication Protocol (PEAP), Lightweight Extensible Authentication Protocol (LEAP) and Tunneled Transport Layer Security (TTLS). The authentication protocol may either be Microsoft Challenge Handshake Authentication Protocol Version 2 (MSCHAPv2) or Generic Token Card (GTC).

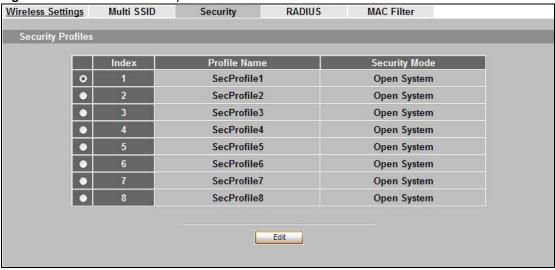

Further information on these terms can be found in Appendix D on page 177.

7.4 The Security Screen

Use this screen to choose the security mode for your NWA.

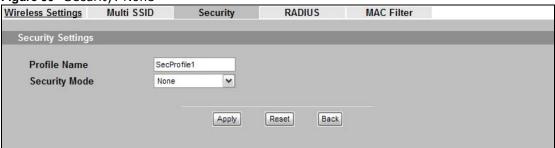

Click Wireless > Security. Select the profile that you want to configure and click Edit.

Figure 29 Wireless > Security

The Security Settings screen varies depending upon the security mode you select.

Figure 30 Security: None

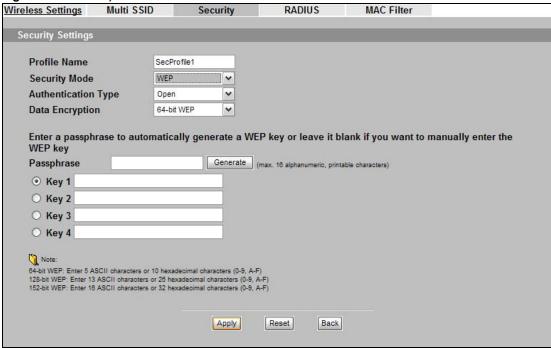

Note that some screens display differently depending on the operating mode selected in the **Wireless > Wireless Settings** screen.

Note: You must enable the same wireless security settings on the NWA and on all wireless clients that you want to associate with it.

7.4.1 Security: WEP

Use this screen to use WEP as the security mode for your NWA. Select **WEP** in the **Security Mode** field to display the following screen.

Figure 31 Security: WEP

The following table describes the labels in this screen.

Table 13 Security: WEP

LABEL	DESCRIPTION
Profile Name	This is the name that identifying this profile.
Security Mode	Choose WEP in this field.
Authentication Type	Select Open or Shared from the drop-down list box.
Data Encryption	Select 64-bit WEP, 128-bit WEP or 152-bit WEP to enable data encryption.
Passphrase	Enter the passphrase or string of text used for automatic WEP key generation on wireless client adapters.
Generate	Click this to get the keys from the Passphrase you entered.
Key 1 to Key 4	The WEP keys are used to encrypt data. Both the NWA and the wireless clients or the wireless device to which the NWA is connecting must use the same WEP key for data transmission.
	If you chose 64-bit WEP , then enter any 5 ASCII characters or 10 hexadecimal characters ("0-9", "A-F").
	If you chose 128-bit WEP , then enter 13 ASCII characters or 26 hexadecimal characters ("0-9", "A-F").
	If you chose 152-bit WEP , then enter 16 ASCII characters or 32 hexadecimal characters ("0-9", "A-F").
	You must configure all four keys, but only one key can be activated at any one time.
Apply	Click Apply to save your changes.

Table 13 Security: WEP (continued)

LABEL	DESCRIPTION
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

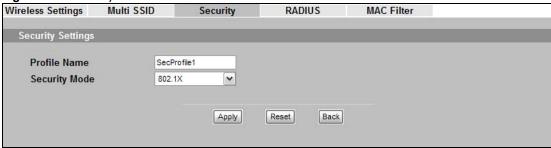

7.4.2 Security: 802.1x Only

This screen varies depending on whether you select **Access Point**, **Multi SSID** or **Wireless Client** in the **Wireless > Wireless Settings** screen.

7.4.2.1 Access Point or Multi SSID

Use this screen to use 802.1x authentication with no data encryption for your NWA that is in **Access Point** or **Multi SSID** operating mode. Select **802.1X** in the **Security Mode** field to display the following screen.

Figure 32 Security: 802.1x for Access Point or Multi SSID

The following table describes the labels in this screen.

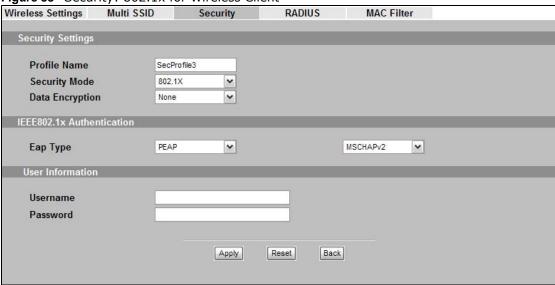

Table 14 Security: 802.1x for Access Point or Multi SSID

LABEL	DESCRIPTION
Security Settings	
Profile Name	This is the name that identifying this profile.
Security Mode	Choose 802.1X in this field.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

7.4.2.2 Wireless Client

Use this screen to use 802.1x authentication with no data encryption for your NWA that is in **Wireless Client** operating mode. Select **802.1x** in the **Security Mode** field to display the following screen.

Figure 33 Security: 802.1x for Wireless Client

The following table describes the labels in this screen.

Table 15 Security: 802.1x for Wireless Client

LABEL	DESCRIPTION		
Security Settings	Security Settings		
Profile Name	This is the name that identifying this profile.		
Security Mode	Choose the same security mode used by the AP.		
Data Encryption	Select None to use 802.1x authentication with no data encryption.		
	Select 64-bit WEP , 128-bit WEP or 152-bit WEP to use 802.1x authentication with a static WEP key. Refer to Section 7.4.3.2 on page 79 for information on using static WEP.		
IEEE802.1x Authentication			
EAP Type	The options on the left refer to EAP methods. You can choose either TLS , LEAP , PEAP or TTLS .		
	The options on the right refer to authentication protocols. You can choose between MSCHAPv2 and GTC.		
User Information	User Information		
Username	Supply the username of the account created in the RADIUS server.		
Password	Supply the password of the account created in the RADIUS server.		
Apply	Click Apply to save your changes.		
Reset	Click Reset to begin configuring this screen afresh.		
Back	Click Back to return to the previous screen.		

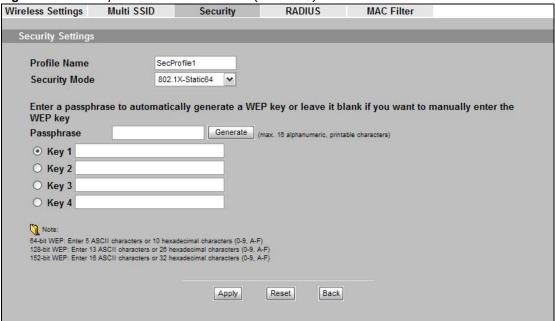

7.4.3 Security: 802.1x + Static WEP

This screen varies depending on whether you select **Access Point**, **Multi SSID** or **Wireless Client** in the **Wireless > Wireless Settings** screen.

7.4.3.1 Access Point or Multi SSID

Use this screen to use 802.1x authentication with a static WEP key for your NWA that is in **Access Point** or **Multi SSID** operating mode. Select **802.1X-Static64**, **802.1X-Static128**, or **802.1X-Static152** in the **Security Mode** field to display the following screen.

Figure 34 Security: 802.1x + Static WEP (AP mode)

The following table describes the labels in this screen.

Table 16 Security: 802.1x + Static WEP (AP mode)

LABEL	DESCRIPTION
Security Settings	
Profile Name	This is the name that identifying this profile.
Security Mode	Choose 802.1X-Static64, 802.1X-Static128, or 802.1X-Static152 in this field.
Passphrase	Enter the passphrase or string of text used for automatic WEP key generation.
Generate	Click this to get the keys from the Passphrase you entered.
Key 1 to Key 4	If you chose 802.1X-Static64 , then enter any 5 characters (ASCII string) or 10 hexadecimal characters ("0-9", "A-F").
	If you chose 802.1X-Static128 , then enter 13 characters (ASCII string) or 26 hexadecimal characters ("0-9", "A-F").
	If you chose 802.1X-Static152 , then enter 16 characters (ASCII string) or 32 hexadecimal characters ("0-9", "A-F").
	There are four data encryption keys to secure your data from eavesdropping by unauthorized wireless users. The values for the keys must be set up exactly the same on the access points as they are on the wireless clients.

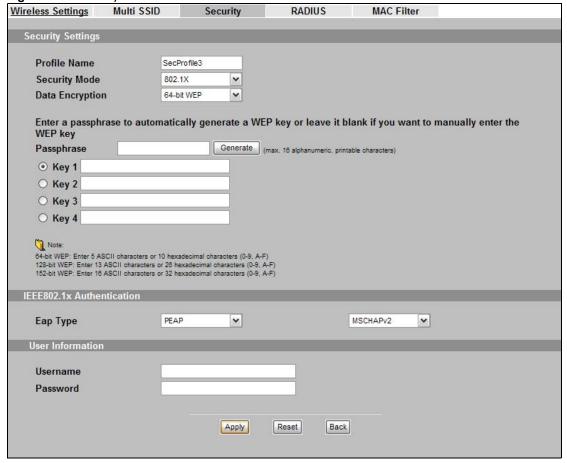

Table 16 Security: 802.1x + Static WEP (AP mode) (continued)

LABEL	DESCRIPTION
Rekey Options	
ReAuthentication Timer	Specify how often wireless stations have to resend user names and passwords in order to stay connected.
	Enter a time interval between 10 and 9999 seconds. Alternatively, enter "0" to turn reauthentication off.
	Note: If wireless station authentication is done using a RADIUS server, the reauthentication timer on the RADIUS server has priority.
Group-Key Update	The NWA automatically disconnects a wireless station from the wired network after a period of inactivity. The wireless station needs to enter the user name and password again before access to the wired network is allowed.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

7.4.3.2 Wireless Client

Use this screen to use 802.1x authentication with a static WEP key for your NWA that is in **Wireless Client** operating mode. Select **802.1x** in the **Security Mode** field to display the following screen.

Figure 35 Security: 802.1x + Static WEP for Wireless Client

The following table describes the labels in this screen.

Table 17 Security: 802.1x + Static WEP for Wireless Client

LABEL	DESCRIPTION
Security Settings	
Profile Name	This is the name that identifying this profile.
Security Mode	Choose the same security mode used by the AP.
Data Encryption	Select 64-bit WEP , 128-bit WEP or 152-bit WEP to use 802.1x authentication with a static WEP key.
Passphrase	Enter the passphrase or string of text used for automatic WEP key generation.
Generate	Click this to get the keys from the Passphrase you entered.
Key 1 to Key 4	The WEP keys are used to encrypt data. Both the NWA and the wireless device to which the NWA is connecting must use the same WEP key for data transmission.
itey i	If you chose 64-bit WEP , then enter any 5 ASCII characters or 10 hexadecimal characters ("0-9", "A-F").
	If you chose 128-bit WEP , then enter 13 ASCII characters or 26 hexadecimal characters ("0-9", "A-F").
	If you chose 152-bit WEP , then enter 16 ASCII characters or 32 hexadecimal characters ("0-9", "A-F").
	You must configure all four keys, but only one key can be activated at any one time.
IEEE802.1x Autho	entication
EAP Type	The options on the left refer to EAP methods. You can choose either TLS , LEAP , PEAP or TTLS .
	The options on the right refer to authentication protocols. You can choose between MSCHAPv2 and GTC.
User Information	
Username	Supply the username of the account created in the RADIUS server.
Password	Supply the password of the account created in the RADIUS server.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

7.4.4 Security: WPA, WPA2 or WPA2-MIX

This screen varies depending on whether you select **Access Point**, **Multi SSID** or **Wireless Client** in the **Wireless > Wireless Settings** screen.

7.4.4.1 Access Point or Multi SSID

Use this screen to employ WPA and/or WPA2 as the security mode of your NWA that is in **Access Point** or **Multi SSID** operating mode. Select **WPA**, **WPA2** or **WPA2-MIX** in the **Security Mode** field to display the following screen.

Figure 36 Security: WPA, WPA2 or WPA2-MIX for Access Point

The following table describes the labels not previously discussed

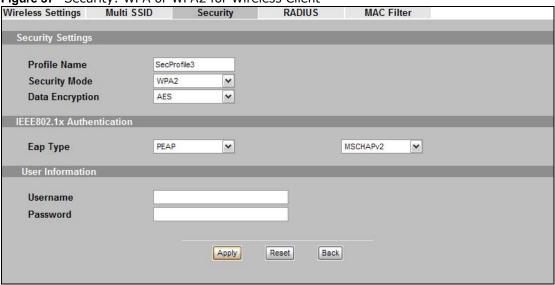

Table 18 Security: WPA, WPA2 or WPA2-MIX for Access Point

LABEL	DESCRIPTIONS
Security Settings	
Profile Name	This is the name that identifying this profile.
Security Mode	Choose WPA, WPA2 or WPA2-MIX in this field.
Rekey Options	
ReAuthentication Timer	Specify how often wireless stations have to resend usernames and passwords in order to stay connected.
	Enter a time interval between 10 and 9999 seconds. Alternatively, enter "0" to turn reauthentication off.
	Note: If wireless station authentication is done using a RADIUS server, the reauthentication timer on the RADIUS server has priority.
Group Key Update	Select this option to have the NWA sends a new group key out to all clients at the rate you sepecify in the evey Second field.
	The re-keying process is the WPA equivalent of automatically changing the group key for an AP and all clients in a WLAN on a periodic basis.
every Seconds	Enter how often you want the NWA to send a new group key out to all clients.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

7.4.4.2 Wireless Client

Use this screen to employ WPA or WPA2 as the security mode of your NWA that is in Wireless Client operating mode. Select **WPA** or **WPA2** in the **Security Mode** field to display the following screen.

Figure 37 Security: WPA or WPA2 for Wireless Client

The following table describes the labels in this screen.

 Table 19
 Security: WPA or WPA2 for Wireless Client

LABEL	DESCRIPTION		
Security Settings	Security Settings		
Profile Name	This is the name that identifying this profile.		
Security Mode	Choose the same security mode used by the AP.		
Data Encryption	This shows the encryption method used by the NWA.		
	TKIP - This is the Temporal Key Integrity Protocol encryption method added later to the WEP encryption protocol to further secure.		
	AES - This is the Advanced Encryption Standard encryption method. It is a more recent development over TKIP and considerably more robust.		
IEEE802.1x Auther	IEEE802.1x Authentication		
EAP Type	The options on the left refer to EAP methods. You can choose either TLS , LEAP , PEAP or TTLS .		
	The options on the right refer to authentication protocols. You can choose between MSCHAPv2 and GTC.		
User Information	User Information		
Username	Supply the username of the account created in the RADIUS server.		
Password	Supply the password of the account created in the RADIUS server.		
Apply	Click Apply to save your changes.		
Reset	Click Reset to begin configuring this screen afresh.		
Back	Click Back to return to the previous screen.		

7.4.5 Security: WPA-PSK, WPA2-PSK, WPA2-PSK-MIX

Use this screen to employ WPA-PSK, WPA2-PSK or WPA2-PSK-MIX as the security mode of your NWA. Select **WPA-PSK**, **WPA2-PSK** or **WPA2-PSK-MIX** in the **Security Mode** field to display the following screen.

Figure 38 Security: WPA-PSK, WPA2-PSK or WPA2-PSK-MIX

The following table describes the labels not previously discussed

Table 20 Security: WPA-PSK, WPA2-PSK or WPA2-PSK-MIX

LABEL	DESCRIPTION
Profile Name	This is the name that identifying this profile.
Security Mode	Choose WPA-PSK, WPA2-PSK or WPA2-PSK-MIX in this field.
Pre-Shared Key	The encryption mechanisms used for WPA(2) and WPA(2)-PSK are the same. The only difference between the two is that WPA(2)-PSK uses a simple common password, instead of user-specific credentials. Type a pre-shared key from 8 to 63 case-sensitive ASCII characters (including spaces and symbols).
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

7.5 Technical Reference

This section provides technical background information on the topics discussed in this chapter.

The following is a general guideline in choosing the security mode for your NWA.

- Use WPA(2)-PSK if you have WPA(2)-aware wireless clients but no RADIUS server. Use WPA(2) security if you have WPA(2)-aware wireless clients and a RADIUS server. WPA has user authentication and improved data encryption over WEP.
- Use WPA(2)-PSK if you have WPA(2)-aware wireless clients but no RADIUS server.
- If you don't have WPA(2)-aware wireless clients, then use WEP key encrypting. A higher bit key offers better security. You can manually enter 64-bit, 128-bit or 152-bit WEP keys.

More information on Wireless Security can be found in Appendix D on page 177.

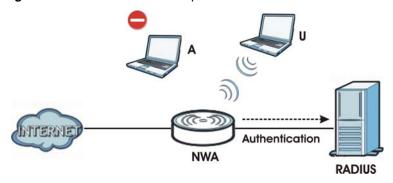

RADIUS Screen

8.1 Overview

This chapter describes how you can use the Wireless > RADIUS screen.

Remote Authentication Dial In User Service (RADIUS) is a protocol that can be used to manage user access to large networks. It is based on a client-server model that supports authentication, authorization and accounting. The access point is the client and the server is the RADIUS server.

Figure 39 RADIUS Server Setup

In the figure above, wireless clients **A** and **B** are trying to access the Internet via the NWA. The NWA in turn queries the RADIUS server if the identity of clients A and U are allowed access to the Internet. In this scenario, only client **U**'s identity is verified by the RADIUS server and allowed access to the Internet.

8.2 What You Can Do in this Chapter

Use the **Security** > **RADIUS** screen if you want to authenticate wireless users using a RADIUS Server and/or Accounting Server (see Section 7.4.1 on page 75).

8.3 What You Need to Know

The RADIUS server handles the following tasks:

- Authentication which determines the identity of the users.
- Authorization which determines the network services available to authenticated users once they are connected to the network.
- Accounting which keeps track of the client's network activity.

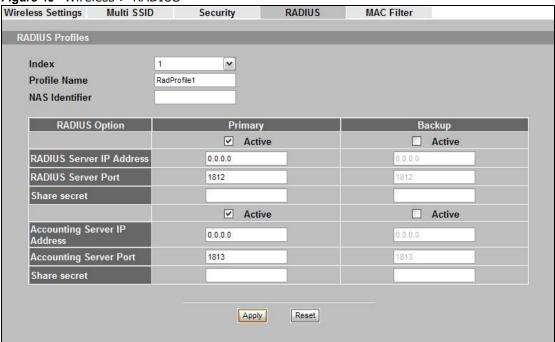

RADIUS is a simple package exchange in which your AP acts as a message relay between the wireless client and the network RADIUS server.

You should know the IP addresses, ports and share secrets of the external RADIUS server and/or the external RADIUS accounting server you want to use with your NWA. You can configure a primary and backup RADIUS and RADIUS accounting server for your NWA.

8.4 The RADIUS Screen

Use this screen to set up your NWA's RADIUS server settings. Click **Wireless** > **RADIUS**. The screen appears as shown.

Figure 40 Wireless > RADIUS

The following table describes the labels in this screen.

Table 21 Wireless > RADIUS

LABEL	DESCRIPTION
Index	Select an index number.
ProfileName	This is the name that identifying this RADIUS.
NAS Identifier	Specify the NAS identifier (a RADIUS attribute) that the NWA uses to identify itself to a RADIUS server for authentication.
RADIUS Option	Configure the fields below to set up user authentication and accounting.
Primary	Select Active to enable user authentication/accounting through an external server.

 Table 21
 Wireless > RADIUS (continued)

LABEL	DESCRIPTION
Backup	If the NWA cannot communicate with the Primary server, you can have the NWA use a Backup server. Make sure the Active check boxes are selected if you want to use backup servers.
	The NWA will attempt to communicate three times before using the Backup servers. Requests can be issued from the client interface to use the backup server.
	The length of time for each authentication is decided by the wireless client or based on the configuration of the ReAuthentication Time field in the Wireless > Security screen.
RADIUS Server IP Address	Enter the IP address of the external authentication server in dotted decimal notation.
RADIUS Server Port	Enter the port number of the external authentication server. You do not need to change this value unless your network administrator instructs you to do so.
Share Secret	Enter a password (up to 128 alphanumeric characters) as the key to be shared between the external authentication server and the NWA. The key must be the same on the external authentication server and your NWA. The key is not sent over the network.
Accounting Server IP Address	Enter the IP address of the external accounting server in dotted decimal notation.
Accounting Server Port	Enter the port number of the external accounting server. You do not need to change this value unless your network administrator instructs you to do so with additional information.
Share Secret	Enter a password (up to 128 alphanumeric characters) as the key to be shared between the external accounting server and the NWA. The key must be the same on the external accounting server and your NWA. The key is not sent over the network.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.

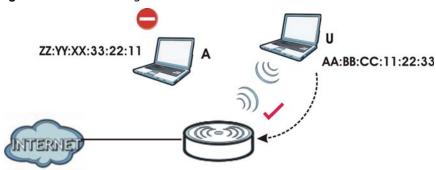

MAC Filter Screen

9.1 Overview

This chapter discusses how you can use the **Wireless** > **MAC Filter** screen.

The MAC filter function allows you to configure the NWA to grant access to the NWA from other wireless devices (Allow Association) or exclude devices from accessing the NWA (Deny Association).

Figure 41 MAC Filtering

In the figure above, wireless client **U** is able to connect to the Internet because its MAC address is in the allowed association list specified in the NWA. The MAC address of client A is either denied association or is not in the list of allowed wireless clients specified in the NWA.

9.2 What You Can Do in this Chapter

Use the **Wireless** > **MAC Filter** screen to specify which wireless station is allowed or denied access to the NWA (see Section 9.4 on page 88).

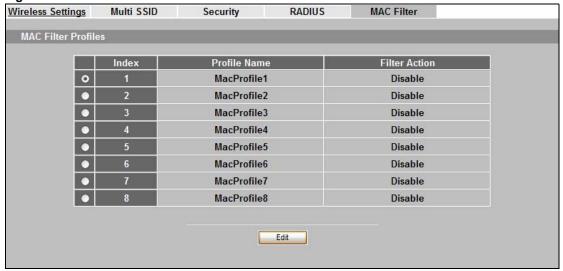

9.3 What You Need To Know

Every Ethernet device has a unique MAC (Media Access Control) address. The MAC address is assigned at the factory and consists of six pairs of hexadecimal characters, for example, 00:A0:C5:00:00:02. You need to know the MAC address of each device to configure MAC filtering on the NWA.

9.4 MAC Filter Screen

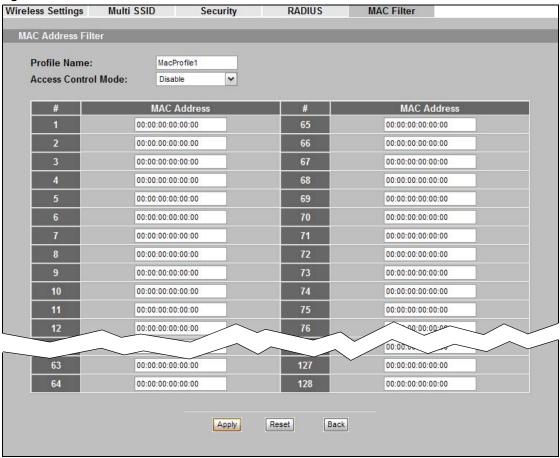

Use this screen to enable MAC address filtering in your NWA. You can specify MAC addresses to either allow or deny association with your NWA. Click **Wireless** > **MAC Filter**. The screen displays as shown.

Figure 42 Wireless > MAC Filter

Select a profile you want to configure and click Edit.

Figure 43 MAC Filter: Edit

The following table describes the labels in this screen.

Table 22 Wireless > MAC Filter

LABEL	DESCRIPTION
ProfileName	This is the name that identifying this RADIUS.
Access Control Mode	Select Disable if you do not want to use this feature.
	Select Allow Listed to permit access to the NWA. MAC addresses not listed will be denied access to the NWA.
	Select Deny Listed to block access to the NWA. MAC addresses not listed will be allowed to access the NWA.
#	This is the index number of the MAC address listed.
MAC Address	Enter the MAC addresses (in XX:XX:XX:XX:XX format) of the wireless station to be allowed or denied access to the NWA.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.
Back	Click Back to return to the previous screen.

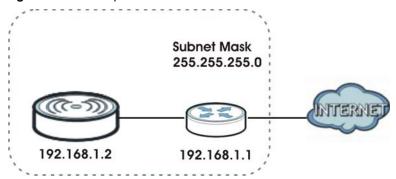

IP Screen

10.1 Overview

This chapter describes how you can configure the IP address of your NWA.

The Internet Protocol (IP) address identifies a device on a network. Every networking device (including computers, servers, routers, printers, etc.) needs an IP address to communicate across the network. These networking devices are also known as hosts.

Figure 44 IP Setup

The figure above illustrates one possible setup of your NWA. The gateway IP address is 192.168.1.2 and the IP address of the NWA is 192.168.1.2 (default). The gateway and the device must belong in the same subnet mask to be able to communicate with each other.

10.2 What You Can Do in this Chapter

Use the IP screen to configure the IP address of your NWA (see Section 10.4 on page 91).

10.3 What You Need to Know

The Ethernet parameters of the NWA are preset in the factory with the following values:

- 1 IP address of 192.168.1.2
- 2 Subnet mask of 255.255.255.0 (24 bits)

10.4 IP Screen

Use this screen to configure the IP address for your NWA. Click IP to display the following screen.

Figure 45 IP Setup

AP IP		
Address Assignment		
Obtain IP Address Autom	atically	
O Use Fixed IP Address		
IP Address:	192.168.1.2	
Subnet Mask:	255:255.255.0	
Gateway IP Address:	0.0.0.0	
ystem DNS Servers		
First DNS Server:	0.0.0.0	
Second DNS Server:	0.0.0,0	
	Apply Cancel	

The following table describes the labels in this screen.

Table 23 IP Setup

LABEL	DESCRIPTION
Obtain IP Address Automatically	Select this option if your NWA is using a dynamically assigned IP address from a DHCP server each time.
	Note: You must know the IP address assigned to the NWA (by the DHCP server) to access the NWA again.
	Note: If the NWA attempts but failes to get an IP address from the DHCP server three times, the NWA then uses the default IP address (192.168.1.2).
Use Fixed IP Address	Select this option if your NWA is using a static IP address. When you select this option, fill in the fields below.
IP Address	Enter the IP address of your NWA in dotted decimal notation.
	Note: If you change the NWA's IP address, you must use the new IP address if you want to access the web configurator again.
Subnet Mask	Type the subnet mask.
Gateway IP Address	Type the IP address of the gateway. The gateway is an immediate neighbor of your NWA that will forward the packet to the destination. On the LAN, the gateway must be a router on the same segment as your NWA; over the WAN, the gateway must be the IP address of one of the remote nodes.
Apply	Click Apply to save your changes.
Reset	Click Reset to begin configuring this screen afresh.

10.5 Technical Reference

This section provides the technical background information about the topics covered in this chapter.

10.5.1 WAN IP Address Assignment

Every computer on the Internet must have a unique IP address. If your networks are isolated from the Internet (only between your two branch offices, for instance) you can assign any IP addresses to the hosts without problems. However, the Internet Assigned Numbers Authority (IANA) has reserved the following three blocks of IP addresses specifically for private networks.

Table 24 Private IP Address Ranges

10.0.0.0	-	10.255.255.255
172.16.0.0	-	172.31.255.255
192.168.0.0	-	192.168.255.255

You can obtain your IP address from the IANA, from an ISP or have it assigned by a private network. If you belong to a small organization and your Internet access is through an ISP, the ISP can provide you with the Internet addresses for your local networks. On the other hand, if you are part of a much larger organization, you should consult your network administrator for the appropriate IP addresses.

Note: Regardless of your particular situation, do not create an arbitrary IP address; always follow the guidelines above. For more information on address assignment, please refer to RFC 1597, Address Allocation for Private Internets and RFC 1466, Guidelines for Management of IP Address Space.

10.5.2 Spanning Tree Protocol (STP)

Spanning Tree Protocol (STP) detects and breaks network loops and provides backup links between switches, bridges or routers. It allows a bridge to interact with other STP-compliant bridges in your network to ensure that only one route exists between any two stations on the network.

10.5.2.1 Rapid STP

The NWA uses IEEE 802.1w RSTP (Rapid Spanning Tree Protocol) that allow faster convergence of the spanning tree (while also being backwards compatible with STP-only aware bridges). Using RSTP topology change information does not have to propagate to the root bridge and unwanted learned addresses are flushed from the filtering database. In RSTP, the port states are Discarding, Learning, and Forwarding.

10.5.2.2 STP Terminology

The root bridge is the base of the spanning tree; it is the bridge with the lowest identifier value (MAC address).

Path cost is the cost of transmitting a frame onto a LAN through that port. It is assigned according to the speed of the link to which a port is attached. The slower the media, the higher the cost - see the following table.

Table 25 STP Path Costs

	LINK SPEED	RECOMMENDED VALUE	RECOMMENDED RANGE	ALLOWED RANGE
Path Cost	4Mbps	250	100 to 1000	1 to 65535
Path Cost	10Mbps	100	50 to 600	1 to 65535
Path Cost	16Mbps	62	40 to 400	1 to 65535
Path Cost	100Mbps	19	10 to 60	1 to 65535
Path Cost	1Gbps	4	3 to 10	1 to 65535
Path Cost	10Gbps	2	1 to 5	1 to 65535

On each bridge, the root port is the port through which this bridge communicates with the root. It is the port on this switch with the lowest path cost to the root (the root path cost). If there is no root port, then this bridge has been accepted as the root bridge of the spanning tree network.

For each LAN segment, a designated bridge is selected. This bridge has the lowest cost to the root among the bridges connected to the LAN.

10.5.2.3 How STP Works

After a bridge determines the lowest cost-spanning tree with STP, it enables the root port and the ports that are the designated ports for connected LANs, and disables all other ports that participate in STP. Network packets are therefore only forwarded between enabled ports, eliminating any possible network loops.

STP-aware bridges exchange Bridge Protocol Data Units (BPDUs) periodically. When the bridged LAN topology changes, a new spanning tree is constructed.

Once a stable network topology has been established, all bridges listen for Hello BPDUs (Bridge Protocol Data Units) transmitted from the root bridge. If a bridge does not get a Hello BPDU after a predefined interval (Max Age), the bridge assumes that the link to the root bridge is down. This bridge then initiates negotiations with other bridges to reconfigure the network to re-establish a valid network topology.

10.5.2.4 STP Port States

STP assigns five port states (see next table) to eliminate packet looping. A bridge port is not allowed to go directly from blocking state to forwarding state so as to eliminate transient loops.

Table 26 STP Port States

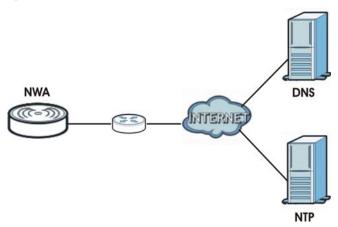

PORT STATES	DESCRIPTIONS
Disabled	STP is disabled (default).
Blocking	Only configuration and management BPDUs are received and processed.
Listening	All BPDUs are received and processed.
Learning	All BPDUs are received and processed. Information frames are submitted to the learning process but not forwarded.
Forwarding	All BPDUs are received and processed. All information frames are received and forwarded.

System Screens

11.1 Overview

This chapter provides information and instructions on how to identify and manage your NWA over the network.

Figure 46 NWA Setup

In the figure above, the NWA connects to a Domain Name Server (DNS) server to avail of a domain name. It also connects to an Network Time Protocol (NTP) server to set the time on the device.

11.2 What You Can Do in this Chapter

- Use the **System > General** screen to specify the **System Name** and **Ethernet Data Rate** value (see Section 11.4 on page 96).
- Use the System > Password screen to manage the password for your NWA (see Section 11.4.1 on page 97).
- Use the System > Time Setting screen to change your NWA's time and date. This screen allows
 you to configure the NWA's time based on your local time zone (see Section 11.5 on page 98).

11.3 What You Need To Know

IP Address Assignment

Every computer on the Internet must have a unique IP address. If your networks are isolated from the Internet, for instance, only between your two branch offices, you can assign any IP addresses

to the hosts without problems. However, the Internet Assigned Numbers Authority (IANA) has reserved the following three blocks of IP addresses specifically for private networks.

Table 27 Private IP Address Ranges

10.0.0.0	-	10.255.255.255
172.16.0.0	-	172.31.255.255
192.168.0.0	-	192.168.255.255

You can obtain your IP address from the IANA, from an ISP or have it assigned by a private network. If you belong to a small organization and your Internet access is through an ISP, the ISP can provide you with the Internet addresses for your local networks. On the other hand, if you are part of a much larger organization, you should consult your network administrator for the appropriate IP addresses.

Note: Regardless of your particular situation, do not create an arbitrary IP address; always follow the guidelines above. For more information on address assignment, please refer to RFC 1597, Address Allocation for Private Internets and RFC 1466, Guidelines for Management of IP Address Space.

IP Address and Subnet Mask

Similar to the way houses on a street share a common street name, computers on a LAN share one common network number.

Where you obtain your network number depends on your particular situation. If the ISP or your network administrator assigns you a block of registered IP addresses, follow their instructions in selecting the IP addresses and the subnet mask.

If the ISP did not explicitly give you an IP network number, then most likely you have a single user account and the ISP will assign you a dynamic IP address when the connection is established. The Internet Assigned Number Authority (IANA) reserved this block of addresses specifically for private use; please do not use any other number unless you are told otherwise. Let's say you select 192.168.1.0 as the network number; which covers 254 individual addresses, from 192.168.1.1 to 192.168.1.254 (zero and 255 are reserved). In other words, the first three numbers specify the network number while the last number identifies an individual computer on that network.

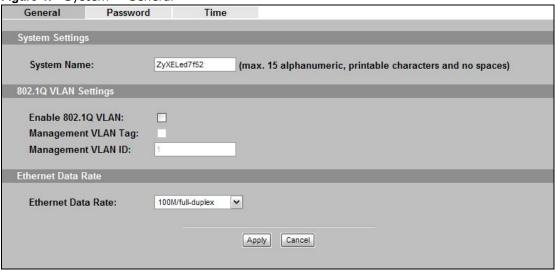

Once you have decided on the network number, pick an IP address that is easy to remember, for instance, 192.168.1.2, for your device, but make sure that no other device on your network is using that IP address.

The subnet mask specifies the network number portion of an IP address. Your device will compute the subnet mask automatically based on the IP address that you entered. You don't need to change the subnet mask computed by the device unless you are instructed to do otherwise.

11.4 General Screen

Use the **General** screen to identify your NWA over the network. Click **System > General**. The following screen displays.

Figure 47 System > General

The following table describes the labels in this screen.

Table 28 System > General

LABEL	DESCRIPTION
System Settings	
System Name	Type a descriptive name to identify the NWA in the Ethernet network.
	This name can be up to 15 alphanumeric characters long. Spaces are not allowed, but dashes "-" are accepted.
802.1Q VLAN Settings	
Enable 802.1Q VLAN	Select this to enable VLAN tagging.
Management VLAN Tag	Select this to enable VLAN management. Only traffic tagged with the management VLAN ID can access the NWA. At least one device in your network must belong to the VLAN specified below in order to manage the NWA.
Management VLAN ID	Enter a number from 1 to 4094 to define this VLAN group. At least one device in your network must belong to this VLAN group in order to manage the NWA.
Ethernet Data Rate	
Ethernet Data Rate	Select an Ethernet port speed and duplex mode from the drop-down list. Select Auto if you would like to have the system configure this automatically.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to reload the previous configuration for this screen.

11.4.1 Password Screen

Use this screen to control access to your NWA by assigning a password to it. Click **System > Password**. The following screen displays.

Figure 48 System > Password

General	Password	Time		
Password Setu	ір			
Current Pas New Passwo Retype to C	ord		(max 19 characters)	
		A	pply Reset	

The following table describes the labels in this screen.

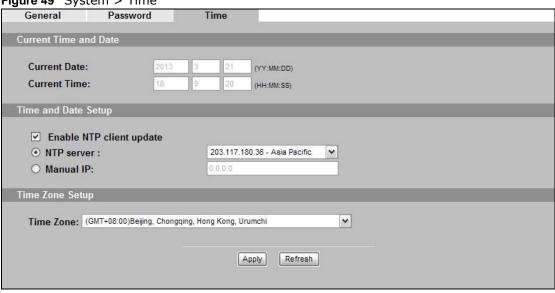

Table 29 System > Password

<u> </u>	
LABEL	DESCRIPTIONS
Current Password	Type in your existing system password.
New Password	Type your new system password (max 19 characters). Note that as you type a password, the screen displays an asterisk (*) for each character you type.
Retype to Confirm	Retype your new system password for confirmation.
Apply	Click Apply to save your changes.
Reset	Click Reset to reload the previous configuration for this screen.

11.5 **Time Screen**

Use this screen to change your NWA's time and date, click **System** > **Time**. The following screen displays.

Figure 49 System > Time

The following table describes the labels in this screen.

Table 30 System > Time

LABEL	DESCRIPTION
Current Time and Date	
Current Date	This field displays the last updated date from the time server.
Current Time	This field displays the time of your NWA.
	Each time you reload this page, the NWA synchronizes the time with the time server (if configured).
Time and Date Setup	
Enable NTP client update	Select this to have the NWA use the predefined list of Network Time Protocol (NTP) servers.
NTP server	Select an NTP server from the drop-list box.
Manual IP	Enter the IP address or URL of your time server. Check with your ISP/network administrator if you are unsure of this information.
Time Zone Setup	
Time Zone	Choose the time zone of your location. This will set the time difference between your time zone and Greenwich Mean Time (GMT).
Apply	Click Apply to save your changes.
Refresh	Click Refresh to reload the previous configuration for this screen.

11.6 Technical Reference

This section provides some technical information about the topics covered in this chapter.

11.6.1 Pre-defined NTP Time Servers List

When you turn on the NWA for the first time, the date and time start at 2000-01-01 00:00:00. When you select **Auto** in the **System** > **Time Setting** screen, the NWA then attempts to synchronize with one of the following pre-defined list of NTP time servers.

The NWA continues to use the following pre-defined list of NTP time servers if you do not specify a time server or it cannot synchronize with the time server you specified.

Table 31 Default Time Servers

ntp1.cs.wisc.edu
ntp1.gbg.netnod.se
ntp2.cs.wisc.edu
tock.usno.navy.mil
ntp3.cs.wisc.edu
ntp.cs.strath.ac.uk
ntp1.sp.se
time1.stupi.se
tick.stdtime.gov.tw
tock.stdtime.gov.tw
time.stdtime.gov.tw

When the NWA uses the pre-defined list of NTP time servers, it randomly selects one server and tries to synchronize with it. If the synchronization fails, then the NWA goes through the rest of the list in order from the first one tried until either it is successful or all the pre-defined NTP time servers have been tried.

Remote Management

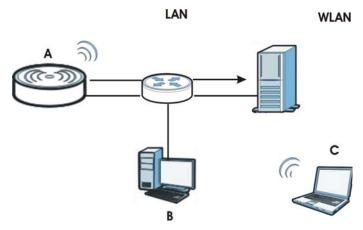

12.1 Overview

This chapter shows you how to enable remote management of your NWA. It provides information on determining which services or protocols can access which of the NWA's interfaces.

Remote Management allows a user to administrate the device over the network. You can manage your NWA from a remote location via the following interfaces:

- WLAN
- LAN
- · Both WLAN and LAN
- Neither (Disable)

Figure 50 Remote Management Example

In the figure above, the NWA (A) is being managed by a desktop computer (B) connected via LAN (Land Area Network). It is also being accessed by a notebook (C) connected via WLAN (Wireless LAN).

12.2 What You Can Do in this Chapter

- Use the **Telnet** screen to configure through which interface(s) and from which IP address(es) you can use Telnet to manage the NWA. A Telnet connection is prioritized by the NWA over other remote management sessions (see Section 12.4 on page 103).
- Use the **FTP** screen to configure through which interface(s) and from which IP address(es) you can use File Transfer Protocol (FTP) to manage the NWA. You can use FTP to upload the latest firmware for example (see Section 12.5 on page 104).

- Use the **WWW** screen to configure through which interface(s) and from which IP address(es) you can use the Web Browser to manage the NWA (see Section 12.6 on page 104).
- Use the **SNMP** screen to configure through which interface(s) and from which IP address(es) a network systems manager can access the NWA (see Section 12.7 on page 106).

12.3 What You Need To Know

Telnet

Telnet is short for Telecommunications Network, which is a client-side protocol that enables you to access a device over the network.

FTP

File Transfer Protocol (FTP) allows you to upload or download a file or several files to and from a remote location using a client or the command console.

WWW

The World Wide Web allows you to access files hosted in a remote server. For example, you can view text files (usually referred to as 'pages') using your web browser via HyperText Transfer Protocol (HTTP).

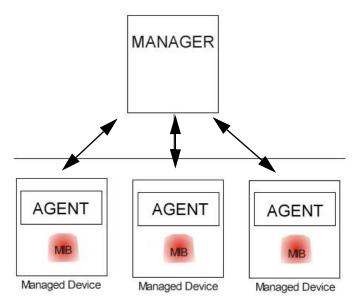

SNMP

Simple Network Management Protocol (SNMP) is a member of the TCP/IP protocol suite used for exchanging management information between network devices.

Your NWA supports SNMP agent functionality, which allows a manager station to manage and monitor the NWA through the network. The NWA supports SNMP version one (SNMPv1) and version two (SNMPv2c). The next figure illustrates an SNMP management operation. .

Note: SNMP is only available if TCP/IP is configured.

Figure 51 SNMP Management Mode

An SNMP managed network consists of two main types of component: agents and a manager.

An agent is a management software module that resides in a managed device (the NWA). An agent translates the local management information from the managed device into a form compatible with SNMP. The manager is the console through which network administrators perform network management functions. It executes applications that control and monitor managed devices.

SNMP allows a manager and agents to communicate for the purpose of accessing information such as packets received, node port status, etc.

Remote Management Limitations

Remote management over LAN or WLAN will not work when:

- You have disabled that service in one of the remote management screens.
- The IP address in the **Secured Client IP Address** field does not match the client IP address. If it does not match, the NWA will disconnect the session immediately.
- You may only have one remote management session running at one time. The NWA automatically disconnects a remote management session of lower priority when another remote management session of higher priority starts. The priorities for the different types of remote management sessions are as follows:
- 1 Telnet
- 2 HTTP

System Timeout

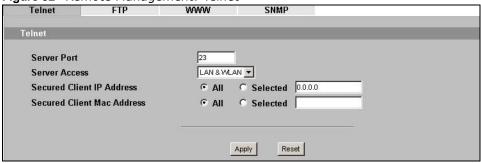

There is a default system management idle timeout of five minutes (three hundred seconds). The NWA automatically logs you out if the management session remains idle for longer than this timeout period. The management session does not time out when a statistics screen is polling.

12.4 The Telnet Screen

Use this screen to configure your NWA for remote Telnet access. You can use Telnet to access the NWA's Command Line Interface (CLI).

Click **REMOTE MGNT** > **TELNET**. The following screen displays.

Figure 52 Remote Management: Telnet

The following table describes the labels in this screen.

Table 32 Remote Management: Telnet

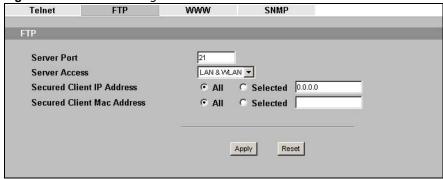

LABEL	DESCRIPTION
TELNET	
Server Port	You can change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.
Server Access	Select the interface(s) through which a computer may access the NWA using Telnet.
Secured Client IP Address	A secured client is a "trusted" computer that is allowed to communicate with the NWA using this service. Select AII to allow any computer to access the NWA using this service.
	Choose Selected to just allow the computer with the IP address that you specify to access the NWA using this service.
Secured Client MAC Address	Select AII to allow any computer to access the NWA using this service. Choose Selected to just allow the computer with the MAC address that you specify to access the NWA using this service.
Apply	Click Apply to save your customized settings and exit this screen.
Reset	Click Reset to begin configuring this screen afresh.

12.5 The FTP Screen

Use this screen to upload and download the NWA's firmware using FTP. To use this feature, your computer must have an FTP client.

To change your NWA's FTP settings, click **REMOTE MGMT** > **FTP**. The following screen displays.

Figure 53 Remote Management: FTP

The following table describes the labels in this screen.

Table 33 Remote Management: FTP

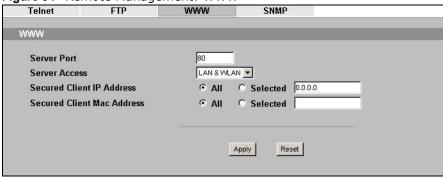

LABEL	DESCRIPTION	
FTP		
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.	
Server Access	Select the interface(s) through which a computer may access the NWA using this service.	
Secured Client IP Address	A secured client is a "trusted" computer that is allowed to communicate with the NWA using this service.	
	Select All to allow any computer to access the NWA using this service.	
	Choose Selected to just allow the computer with the IP address that you specify to access the NWA using this service.	
Secured Client MAC Address	Select All to allow any computer to access the NWA using this service.	
	Choose Selected to just allow the computer with the MAC address that you specify to access the NWAe using this service.	
Apply	Click Apply to save your customized settings and exit this screen.	
Reset	Click Reset to begin configuring this screen afresh.	

12.6 The WWW Screen

Use this screen to configure your NWA via the World Wide Web (**WWW**) using a Web browser. This lets you specify which IP addresses or computers are able to communicate with and access the NWA.

To change your NWA's **WWW** settings, click **REMOTE MGNT** > **WWW**. The following screen shows.

Figure 54 Remote Management: WWW

The following table describes the labels in this screen.

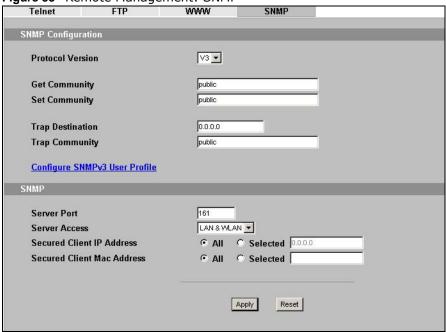

Table 34 Remote Management: WWW

LABEL	DESCRIPTION	
www		
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.	
Server Access	Select the interface(s) through which a computer may access the NWA using this service.	
Secured Client IP Address	A secured client is a "trusted" computer that is allowed to communicate with the NWA using this service.	
	Select All to allow any computer to access the NWA using this service.	
	Choose Selected to just allow the computer with the IP address that you specify to access the NWA using this service.	
Secured Client	Select All to allow any computer to access the NWA using this service.	
MAC Address	Choose Selected to just allow the computer with the MAC address that you specify to access the NWA using this service.	
Apply	Click Apply to save your customized settings and exit this screen.	
Reset	Click Reset to begin configuring this screen afresh.	

12.7 The SNMP Screen

Use this screen to have a manager station administrate your NWA over the network. To change your NWA's SNMP settings, click **REMOTE MGMT > SNMP**. The following screen displays.

Figure 55 Remote Management: SNMP

The following table describes the labels in this screen.

Table 35 Remote Management: SNMP

LABEL	DESCRIPTION	
SNMP Configuration		
Get Community	Enter the Get Community , which is the password for the incoming Get and GetNext requests from the management station.	
Set Community	Enter the Set community , which is the password for incoming Set requests from the management station.	
Trap Destination	Type the IP address of the station to send your SNMP traps to.	
Trap Community	Type the trap community, which is the password sent with each trap to the SNMP manager.	
	This field is available only when SNMPv1 or SNMPv2 is selected in the SNMP Version field.	
Configure SNMPv3 User Profile	Click this to configure administration and user login details.	
Enable SNMPv3Admin	Select the check box to enable the SNMP administrator account for authentication with SNMP managers using SNMP v3.	
User Name	Specify the user name of the SNMP administrator account.	
Password	Enter the password for SNMP administrator authentication.	
Confirm Password	Retype the password for confirmation.	

Table 35 Remote Management: SNMP (continued)

DESCRIPTION
Specify the SNMP administrator's access rights to MIBs.
Read/Write - The SNMP administrator has read and write rights, meaning that the user can create and edit the MIBs on the NWA.
Read Only - The SNMP administrator has read rights only, meaning the user can collect information from the NWA.
Select an authentication algorithm used for SNMP communication with the SNMP administrator.
MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate SNMP data. SHA authentication is generally considered stronger than MD5, but is slower. Select None to not use authentication.
Specify the encryption method used for SNMP communication with the SNMP administrator.
DES - Data Encryption Standard is a widely used (but breakable) method of data encryption. It applies a 56-bit key to each 64-bit block of data.
AES - Advanced Encryption Standard is another method for data encryption that also uses a secret key. AES applies a 128-bit key to 128-bit blocks of data.
None - no encryption is used.
Select the check box to enable the SNMP user account for authentication with SNMP managers using SNMP v3.
Specify the user name of the SNMP user account.
Enter the password for SNMP user authentication.
Retype the password for confirmation.
Specify the SNMP user's access rights to MIBs.
Read Only - The SNMP user has read rights only, meaning the user can collect information from the NWA.
Read/Write - The SNMP user has read and write rights, meaning that the user can create and edit the MIBs on the NWA.
Select an authentication algorithm used for SNMP communication with the SNMP user.
MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate SNMP data. SHA authentication is generally considered stronger than MD5, but is slower. Select None to not use authentication.
Specify the encryption method used for SNMP communication with the SNMP user.
DES - Data Encryption Standard is a widely used (but breakable) method of data encryption. It applies a 56-bit key to each 64-bit block of data.
AES - Advanced Encryption Standard is another method for data encryption that also uses a secret key. AES applies a 128-bit key to 128-bit blocks of data.
None - no encryption is used.
You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.
Select the interface(s) through which a computer may access the NWA using this service.

Table 35 Remote Management: SNMP (continued)

LABEL	DESCRIPTION
Secured Client IP Address	A secured client is a "trusted" computer that is allowed to communicate with the NWA using this service.
	Select All to allow any computer to access the NWA using this service.
	Choose Selected to just allow the computer with the IP address that you specify to access the NWA using this service.
Secured Client MAC	Select All to allow any computer to access the NWA using this service.
Address	Choose Selected to just allow the computer with the MAC address that you specify to access the NWA using this service.
Apply	Click Apply to save your customized settings and exit this screen.
Reset	Click Reset to begin configuring this screen afresh.

12.8 Technical Reference

This section provides some technical background information about the topics covered in this chapter.

12.8.1 MIB

Managed devices in an SMNP managed network contain object variables or managed objects that define each piece of information to be collected about a device. Examples of variables include such as number of packets received, node port status etc. A Management Information Base (MIB) is a collection of managed objects. SNMP itself is a simple request/response protocol based on the manager/agent model. The manager issues a request and the agent returns responses using the following protocol operations:

- Get Allows the manager to retrieve an object variable from the agent.
- GetNext Allows the manager to retrieve the next object variable from a table or list within an agent. In SNMPv1, when a manager wants to retrieve all elements of a table from an agent, it initiates a Get operation, followed by a series of GetNext operations.
- Set Allows the manager to set values for object variables within an agent.
- Trap Used by the agent to inform the manager of some events.

12.8.2 Supported MIBs

The NWA supports MIB II that is defined in RFC-1213 and RFC-1215 as well as the proprietary ZyXEL private MIB. The purpose of the MIBs is to let administrators collect statistical data and monitor status and performance.

12.8.3 SNMP Traps

SNMP traps are messages sent by the agents of each managed device to the SNMP manager. These messages inform the administrator of events in data networks handled by the device. The NWA can send the following traps to the SNMP manager.

Table 36 SNMP Traps

TRAP NAME	OBJECT IDENTIFIER # (OID)	DESCRIPTION
Generic Traps		
coldStart	1.3.6.1.6.3.1.1.5.1	This trap is sent after booting (power on). This trap is defined in RFC-1215.
warmStart	1.3.6.1.6.3.1.1.5.2	This trap is sent after booting (software reboot). This trap is defined in RFC-1215.
linkDown	1.3.6.1.6.3.1.1.5.3	This trap is sent when the Ethernet link is down.
linkUp	1.3.6.1.6.3.1.1.5.4	This trap is sent when the Ethernet link is up.
authenticationFailure (defined in <i>RFC-1215</i>)	1.3.6.1.6.3.1.1.5.5	The device sends this trap when it receives any SNMP get or set requirements with the wrong community (password).
		Note: snmpEnableAuthenTraps, OID 1.3.6.1.2.1.11.30 (defined in RFC 1214 and RFC 1907) must be enabled on in order for the device to send authenticationFailure traps. Use a MIB browser to enable or disable snmpEnableAuthenTraps.
Traps defined in the ZyXEL Private MIB.		
whyReboot	1.3.6.1.4.1.890.1.5.13.0. 1	This trap is sent with the reason for restarting before the system reboots (warm start).
		"System reboot by user!" is added for an intentional reboot (for example, download new files, CI command "sys reboot").
		If the system reboots because of fatal errors, a code for the error is listed.
pwTFTPStatus	1.3.6.1.4.1.890.1.9.2.3.3 .1	This trap is sent to indicate the status and result of a TFTP client session that has ended.

Some traps include an SNMP interface index. The following table maps the SNMP interface indexes to the NWA's physical and virtual ports.

Table 37 SNMP Interface Index to Physical and Virtual Port Mapping

TYPE	INTERFACE	PORT
Physical	enet0	Wireless LAN adaptor WLAN1
	enet1	Ethernet port (LAN)
	enet2	Wireless LAN adaptor WLAN2
Virtual	enet3 ~ enet9	WLAN1 in MBSSID mode
	enet10 ~ enet16	WLAN2 in MBSSID mode
	enet17 ~ enet21	WLAN1 in WDS mode
	enet22 ~ enet26	WLAN2 in WDS mode

Certificate Screen

13.1 Overview

This chapter describes how your NWA can use certificates as a means of authenticating wireless clients. It gives background information about public-key certificates and explains how to use them.

A certificate contains the certificate owner's identity and public key. Certificates provide a way to exchange public keys for use in authentication.

Figure 56 Certificates Example

In the figure above, the NWA (Z) checks the identity of the notebook (A) using a certificate before granting access to the network.

13.2 What You Can Do in this Chapter

Use the **CERTIFICATES** > **Certificates** screen to view, delete and import certificates (seen Section 13.4 on page 111).

13.3 What You Need To Know

The certification authority certificate that you can import to your NWA should be in PFX PKCS#12 file format. This format referred to as the Personal Information Exchange Syntax Standard is comprised of a private key-public certificate pair that is further encrypted with a password. Before you import a certificate into the NWA, you should verify that you have the correct certificate.

Key distribution is simple and very secure since you can freely distribute public keys and you never need to transmit private keys.

13.4 Certificates Screen

Use this screen to view, delete and import certificates.

Click **CERTIFICATES** to open the NWA's summary list of certificates and to import a new certificate. See the following figure.

Figure 57 Certificates

The following table describes the labels in this screen.

Table 38 Certificates

Table 99 Coldinates		
LABEL	DESCRIPTION	
Delete Certificate		
You can delete a certificate	Select the certificate from the list that you want to delete.	
Delete	Click this to delete the selected certificate.	
Import Certificate		
File Path	Enter the location of a previously-saved certificate to upload to the NWA. Alternatively, click the Browse button to locate a list.	
Browse	Click this button to locate a previously-saved certificate to upload to the NWA.	
Import	Click this button to upload the previously-saved certificate displayed in the File Path field to the NWA.	

13.5 Technical Reference

This section provides technical background information about the topics covered in this chapter.

13.5.1 Private-Public Certificates

When using public-key cryptology for authentication, each host has two keys. One key is public and can be made openly available. The other key is private and must be kept secure.

These keys work like a handwritten signature (in fact, certificates are often referred to as "digital signatures"). Only you can write your signature exactly as it should look. When people know what your signature looks like, they can verify whether something was signed by you, or by someone else. In the same way, your private key "writes" your digital signature and your public key allows people to verify whether data was signed by you, or by someone else. This process works as follows.

- 1 Tim wants to send a message to Jenny. He needs her to be sure that it comes from him, and that the message content has not been altered by anyone else along the way. Tim generates a public key pair (one public key and one private key).
- 2 Tim keeps the private key and makes the public key openly available. This means that anyone who receives a message seeming to come from Tim can read it and verify whether it is really from him or not.
- 3 Tim uses his private key to sign the message and sends it to Jenny.
- 4 Jenny receives the message and uses Tim's public key to verify it. Jenny knows that the message is from Tim, and that although other people may have been able to read the message, no-one can have altered it (because they cannot re-sign the message with Tim's private key).
- 5 Additionally, Jenny uses her own private key to sign a message and Tim uses Jenny's public key to verify the message.

13.5.2 Certification Authorities

A Certification Authority (CA) issues certificates and guarantees the identity of each certificate owner. There are commercial certification authorities like CyberTrust or VeriSign and government certification authorities. You can use the NWA to generate certification requests that contain identifying information and public keys and then send the certification requests to a certification authority.

13.5.3 Checking the Fingerprint of a Certificate on Your Computer

A certificate's fingerprints are message digests calculated using the MD5 or SHA1 algorithms. The following procedure describes how to check a certificate's fingerprint to verify that you have the actual certificate.

- 1 Browse to where you have the certificate saved on your computer.
- 2 Make sure that the certificate has a ".cer" or ".crt" file name extension.

Figure 58 Certificates on Your Computer

3 Double-click the certificate's icon to open the **Certificate** window. Click the **Details** tab and scroll down to the **Thumbprint Algorithm** and **Thumbprint** fields.

Figure 59 Certificate Details

4 Use a secure method to verify that the certificate owner has the same information in the **Thumbprint Algorithm** and **Thumbprint** fields. The secure method may vary according to your situation. Possible examples would be over the telephone or through an HTTPS connection.

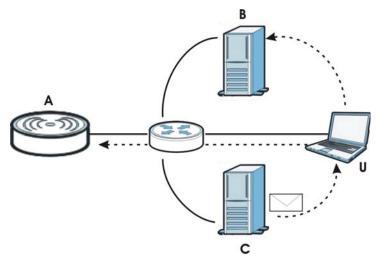

Log Screens

14.1 Overview

This chapter provides information on viewing and generating logs on your NWA.

Logs are files that contain recorded network activity over a set period. They are used by administrators to monitor the health of the system(s) they are managing. Logs enable administrators to effectively monitor events, errors, progress, etc. so that when network problems or system failures occur, the cause or origin can be traced. Logs are also essential for auditing and keeping track of changes made by users.

Figure 60 Accessing Logs in the Network

The figure above illustrates three ways to access logs. The user **(U)** can access logs directly from the NWA **(A)** via the Web configurator. Logs can also be located in an external log server **(B)**. An email server **(C)** can also send harvested logs to the user's email account.

14.2 What You Can Do in this Chapter

- Use the **View Log** screen to display all logs or logs for a certain category. You can view logs and alert messages in this page. Once the log entries are all used, the log will wrap around and the old logs will be deleted (Section 14.4 on page 115).
- Use the **Log Settings** screen to configure where and when the NWA will send the logs, and which logs and/or immediate alerts it will send (Section 14.5 on page 116).

14.3 What You Need To Know

Alerts and Logs

An alert is a type of log that warrants more serious attention. Some categories such as **System Errors** consist of both logs and alerts. You can differentiate them by their color in the **View Log** screen. Alerts are displayed in red and logs are displayed in black.

Receiving Logs via E-mail

If you want to receive logs in your e-mail account, you need to have the necessary details ready, such as the Server Name or Simple Mail Transfer Protocol (SMTP) Address of your e-mail account. Ensure that you have a valid e-mail address.

Enabling Syslog Logging

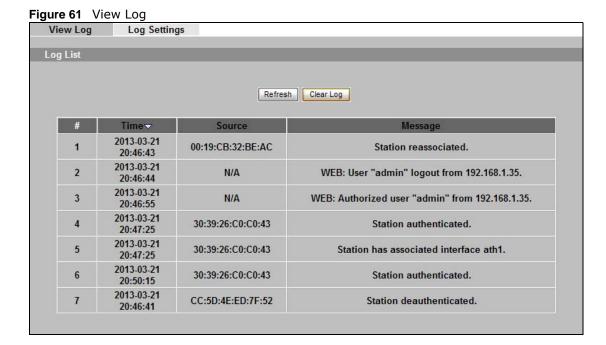

To enable Syslog Logging, obtain your Syslog server's IP address (or server name).

14.4 View Log Screen

Use this screen to view all the NWA's logs in one location.

Click **Logs** > **View Log**. Use the **View Log** screen to see the logs for the categories that you selected in the **Log Settings** screen (see Figure 62 on page 117). Options include logs about system maintenance, system errors and access control.

Click a column heading to sort the entries. A triangle indicates the direction of the sort order.

The following table describes the labels in this screen.

Table 39 View Log

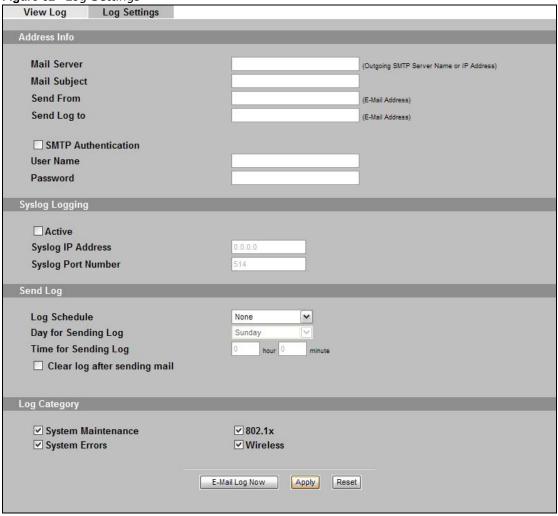

LABEL	DESCRIPTION
Refresh	Click Refresh to renew the log screen.
Clear Log	Click Clear Log to clear all the logs.
#	This field is a sequential value and is not associated with a specific entry.
Time	This field displays the time the log was recorded. Click the column heading to sort the entries. A triangle indicates the direction of the sort order.
Source	This field lists the MAC address of the wireless client that is connected to or failed to associate with the NWA.
Message	This field states the reason for the log.

14.5 Log Settings Screen

Use this screen to configure to where and when the NWA is to send the logs and which logs and/or immediate alerts it is to send.

To change your NWA's log settings, click **LOGS** > **Log Settings**. The screen appears as shown.

Figure 62 Log Settings

The following table describes the labels in this screen.

Table 40 Log Settings

LABEL	DESCRIPTION
Address Info	
Mail Server	Enter the server name or the IP address of the mail server for the e-mail addresses specified below. If this field is left blank, logs and alert messages will not be sent via e-mail.
Mail Subject	Type a title that you want to be in the subject line of the log e-mail message that the NWA sends.
Send From	Enter the e-mail address that you want to be in the from/sender line of the log e-mail message that the NWA sends. If you activate SMTP authentication, the e-mail address must be able to be authenticated by the mail server as well.
Send Log to	Logs are sent to the e-mail address specified in this field. If this field is left blank, logs will not be sent via e-mail.
SMTP Authentication	If you use SMTP authentication, the mail receiver should be the owner of the SMTP account.

 Table 40
 Log Settings (continued)

Password E Syslog Logging S Active Syslog IP Address E Syslog Port Number I Send Log Log Schedule	If your e-mail account requires SMTP authentication, enter the username here. Enter the password associated with the above username. Syslog logging sends a log to an external syslog server used to store logs. Click Active to enable syslog logging. Enter the IP address of the syslog server that will log the selected categories of logs. Enter the port number of the syslog server that will log the selected categories of logs. This drop-down menu is used to configure the frequency of log messages being sent as E-mail: • Daily
Syslog Logging Active Syslog IP Address Syslog Port Number Send Log Log Schedule	Syslog logging sends a log to an external syslog server used to store logs. Click Active to enable syslog logging. Apply	Click Apply to save your customized settings and exit this screen.
Reset (Click Reset to reconfigure all the fields in this screen.

Maintenance

15.1 Overview

This chapter describes the maintenance screens. It discusses how you can view the association list and channel usage, upload new firmware, manage configuration and restart your NWA without turning it off and on.

15.2 What You Can Do in this Chapter

- Use the **Client Information** screen to view the wireless clients that are currently associated with the NWA (see Section 15.4 on page 119).
- Use the **Channel Scan** screen to view whether a channel is used by another wireless network or not. If a channel is being used, you should select a channel removed from it by five channels to completely avoid overlap (see Section 15.5 on page 120).
- Use the **F/W Upload** screen to upload the latest firmware for your NWA (see Section 15.6 on page 121).
- Use the **Configuration File** screen to view information related to factory defaults, backup configuration, and restoring configuration (see Section 15.7 on page 123).
- Use **Reboot** screen to reboot the NWA without turning the power off (see Section 15.8 on page 125).

15.3 What You Need To Know

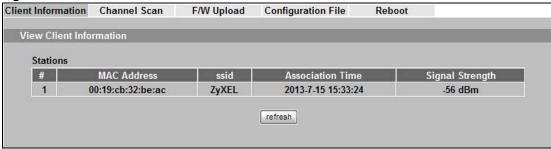

You can find the firmware for your device at www.zyxel.com. It is a file that (usually) uses the system model name with a "*.bin" extension, for example "[Model #].bin". The upload process uses HTTP (Hypertext Transfer Protocol) and may take up to two minutes. After a successful upload, the system will reboot.

15.4 Client Information Screen

Use this screen to view the wireless stations that are currently associated with the NWA.

Click Maintenance > Client Information. The following screen displays.

Figure 63 Client Information

The following table describes the labels in this screen.

Table 41 Client Information

LABEL	DESCRIPTION
#	This is the index number of an associated wireless station.
MAC Address	This field displays the MAC address of an associated wireless station.
ssid	This field displays the SSID to which the wireless station is associated.
Association Time	This field displays the time a wireless station first associated with the NWA.
Signal Strength	This field displays the RSSI (Received Signal Strength Indicator) of the wireless connection.
Refresh	Click Refresh to reload the screen.

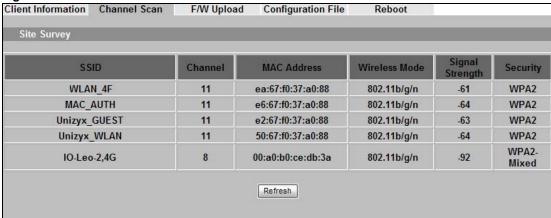

15.5 Channel Scan Screen

Use this screen to know whether a channel is used by another wireless network or not. If a channel is being used, you should select a channel removed from it by five channels to completely avoid overlap.

Click Maintenance > Channel Scan to display the screen shown next.

Wait a moment while the NWA compiles the information.

Figure 64 Channel Scan

The following table describes the labels in this screen.

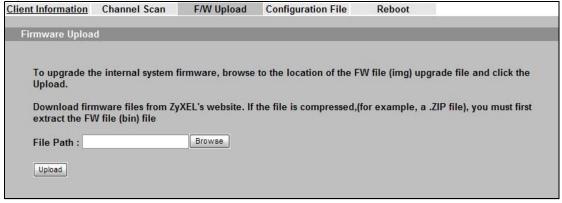

Table 42 Channel Scan

LABEL	DESCRIPTION
SSID	This is the Service Set IDentification name of the AP in an Infrastructure wireless network or wireless station in an Ad-Hoc wireless network. For our purposes, we define an Infrastructure network as a wireless network that uses an AP and an Ad-Hoc network (also known as Independent Basic Service Set (IBSS)) as one that doesn't. See the chapter on wireless configuration for more information on basic service sets (BSS) and extended service sets (ESS).
Channel	This is the index number of the channel currently used by the associated AP in an Infrastructure wireless network or wireless station in an Ad-Hoc wireless network.
MAC Address	This field displays the MAC address of the AP in an Infrastructure wireless network. It is randomly generated (so ignore it) in an Ad-Hoc wireless network.
Wireless Mode	This is the IEEE 802.1x standard used by your NWA to apply enhanced security methods for both the authentication of wireless stations and encryption key management.
Signal Strength	This field displays the strength of the AP's signal. If you must choose a channel that is currently in use, choose one with low signal strength for minimum interference.
Security	This is the wireless security method used by your NWA protect wireless communication between wireless stations, access points and the wired network.
Refresh	Click Refresh to reload the screen.

15.6 F/W Upload Screen

Use this screen to upload a firmware to your NWA. Click **Maintenance** > **F/W Upload**. Follow the instructions in this section to upload firmware to your NWA.

Figure 65 Firmware Upload

The following table describes the labels in this screen.

Table 43 Firmware Upload

Table 43 Tillimate opioad	
LABEL	DESCRIPTION
File Path	Type in the location of the file you want to upload in this field or click Browse to find it.

Table 43 Firmware Upload (continued)

LABEL	DESCRIPTION
Browse	Click Browse to find the .bin file you want to upload. Remember that you must decompress compressed (.zip) files before you can upload them.
Upload	Click Upload to begin the upload process. This process may take up to two minutes.

Do not turn off the NWA while firmware upload is in progress!

After you see the **Firmware Upload in Process** screen, wait two minutes before logging into the NWA again.

Figure 66 Firmware Upload In Process

The NWA automatically restarts in this time causing a temporary network disconnect. In some operating systems, you may see the following icon on your desktop.

Figure 67 Network Temporarily Disconnected

After two minutes, log in again and check your new firmware version in the **Status** screen.

If the upload was not successful, the following screen will appear. Click **Return** to go back to the **F/W Upload** screen.

Figure 68 Firmware Upload Error

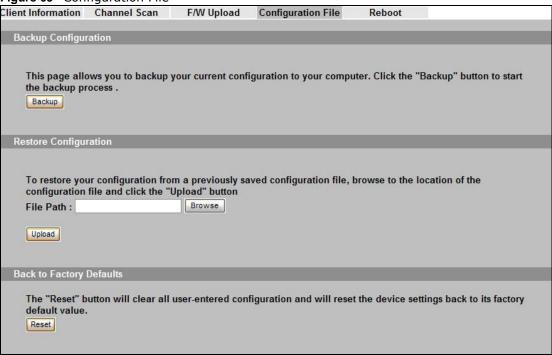

15.7 Configuration File Screen

Use this screen to backup, restore and reset the configuration of your NWA.

Click Maintenance > Configuration File. The screen appears as shown next.

Figure 69 Configuration File

15.7.1 Backup Configuration

Backup configuration allows you to back up (save) the NWA's current configuration to a file on your computer. Once your NWA is configured and functioning properly, it is highly recommended that you back up your configuration file before making configuration changes. The backup configuration file will be useful in case you need to return to your previous settings.

Click **Backup** to save the NWA's current configuration to your computer.

15.7.2 Restore Configuration

Restore configuration allows you to upload a new or previously saved configuration file from your computer to your NWA.

Table 44 Restore Configuration

LABEL	DESCRIPTION
File Path	Type in the location of the file you want to upload in this field or click Browse to find it.
Browse	Click Browse to find the file you want to upload. Remember that you must decompress compressed (.ZIP) files before you can upload them.
Upload	Click Upload to begin the upload process.

Do not turn off the NWA while configuration file upload is in progress.

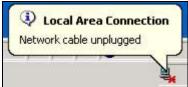

After you see a "restore configuration successful" screen, you must then wait one minute before logging into the NWA again.

Figure 70 Configuration Upload Successful

The NWA automatically restarts in this time causing a temporary network disconnect. In some operating systems, you may see the following icon on your desktop.

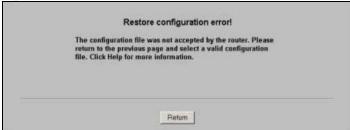

Figure 71 Network Temporarily Disconnected

If you uploaded the default configuration file you may need to change the IP address of your computer to be in the same subnet as that of the default NWA IP address (192.168.1.2). See your Quick Start Guide for details on how to set up your computer's IP address.

If the upload was not successful, the following screen will appear. Click **Return** to go back to the **Configuration** screen.

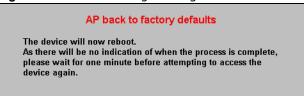

Figure 72 Configuration Upload Error

15.7.3 Back to Factory Defaults

Pressing the **Reset** button in this section clears all user-entered configuration information and returns the NWA to its factory defaults as shown on the screen. The following warning screen will appear.

Figure 73 Reset Warning Message

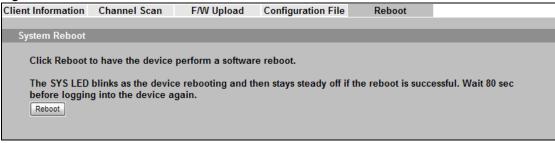

You can also press the **RESET** button to reset your NWA to its factory default settings. Refer to Section 2.2 on page 20 for more information.

15.8 Reboot Screen

Use this screen to reboot the NWA without turning the power off.

Click Maintenance > Reboot. The following screen displays.

Figure 74 Reboot Screen

Click Reboot to have the NWA reboot. This does not affect the NWA's configuration.

Troubleshooting

This chapter offers some suggestions to solve problems you might encounter. The potential problems are divided into the following categories.

- Power, Hardware Connections, and LEDs
- NWA Access and Login
- Internet Access
- Wireless LAN

16.1 Power, Hardware Connections, and LEDs

The NWA does not turn on. None of the LEDs turn on.

- 1 Make sure you are using the power adaptor or cord included with the NWA.
- 2 Make sure the power adaptor or cord is connected to the NWA and plugged in to an appropriate power source. Make sure the power source is turned on.
- 3 Disconnect and re-connect the power adaptor or cord to the NWA.
- 4 If the problem continues, contact the vendor.

One of the LEDs does not behave as expected.

- 1 Make sure you understand the normal behavior of the LED. See Section 1.7 on page 18.
- 2 Check the hardware connections. See the Quick Start Guide.
- 3 Inspect your cables for damage. Contact the vendor to replace any damaged cables.
- 4 Disconnect and re-connect the power adaptor to the NWA.
- 5 If the problem continues, contact the vendor.

16.2 NWA Access and Login

I forgot the IP address for the NWA.

- 1 The default IP address is 192.168.1.2.
- 2 If the NWA is working as a DHCP client and receives an IP address from a DHCP server, check the DHCP server for the NWA's IP address.
- 3 If you configured a static IP address and have forgotten it, you have to reset the device to its factory defaults. See Section 2.2 on page 20.

I forgot the password.

- 1 The default password is **1234**.
- 2 If this does not work, you have to reset the device to its factory defaults. See Section 2.2 on page 20.

I cannot see or access the **Login** screen in the web configurator.

- 1 Make sure you are using the correct IP address.
 - The default IP address is 192.168.1.2.
 - If you changed the IP address (Section 10.4 on page 91), use the new IP address.
 - If you changed the IP address and have forgotten it, see the troubleshooting suggestions for I forgot the IP address for the NWA.
- 2 Check the hardware connections, and make sure the LEDs are behaving as expected. See the Quick Start Guide and Section 1.7 on page 18.
- 3 Make sure your Internet browser does not block pop-up windows and has JavaScript and Java enabled. See Section 16.1 on page 126.
- 4 Make sure your computer is in the same subnet as the NWA. (If you know that there are routers between your computer and the NWA, skip this step.)
 - If there is no DHCP server on your network, make sure your computer's IP address is in the same subnet as the NWA.
- 5 Reset the device to its factory defaults, and try to access the NWA with the default IP address. See your Quick Start Guide.
- **6** If the problem continues, contact the network administrator or vendor, or try one of the advanced suggestions.

Advanced Suggestions

- Try to access the NWA using another service, such as Telnet. If you can access the NWA, check the remote management settings to find out why the NWA does not respond to HTTP.
- If your computer is connected wirelessly, use a computer that is connected to a LAN/Ethernet port.

I can see the **Login** screen, but I cannot log in to the NWA.

- 1 Make sure you have entered the user name and password correctly. The default password is **1234**. This fields are case-sensitive, so make sure [Caps Lock] is not on.
- 2 Disconnect and re-connect the power adaptor or cord to the NWA.
- 3 If this does not work, you have to reset the device to its factory defaults. See Section 2.2 on page 20.

I cannot use FTP to upload new firmware.

See the troubleshooting suggestions for I cannot see or access the Login screen in the web configurator. Ignore the suggestions about your browser.

16.3 Internet Access

I cannot access the Internet.

- 1 Check the hardware connections, and make sure the LEDs are behaving as expected. See the Quick Start Guide and Section 16.1 on page 126.
- 2 2. Make sure your NWA is connected to a networking device that provides Internet access.
- 3 If you are trying to access the Internet wirelessly, make sure the wireless settings on the wireless client are the same as the settings on the AP.
- 4 Disconnect all the cables from your device, and follow the directions in the Quick Start Guide again.
- 5 If the problem continues, contact your ISP.

I cannot access the Internet anymore. I had access to the Internet (with the NWA), but my Internet connection is not available anymore.

- 1 Check the hardware connections, and make sure the LEDs are behaving as expected. See the Quick Start Guide and Section 1.7 on page 18.
- 2 Reboot the NWA.
- **3** If the problem continues, contact your ISP or network administrator.

The Internet connection is slow or intermittent.

- There might be a lot of traffic on the network. Look at the LEDs, and check Section 1.7 on page 18. If the NWA is sending or receiving a lot of information, try closing some programs that use the Internet, especially peer-to-peer applications.
- 2 Check the signal strength. If the signal is weak, try moving the NWA (in wireless client mode) closer to the AP (if possible), and look around to see if there are any devices that might be interfering with the wireless network (microwaves, other wireless networks, and so on).
- 3 Reboot the NWA.
- 4 If the problem continues, contact the network administrator or vendor, or try one of the advanced suggestions.

Advanced Suggestions

• Check the settings for QoS. If it is disabled, you might consider activating it.

16.4 Wireless LAN

I cannot access the NWA or ping any computer from the WLAN.

- 1 Make sure the wireless LAN is enabled on the NWA.
- 2 Make sure the wireless adapter on the wireless station is working properly.
- 3 Make sure the wireless adapter installed on your computer is IEEE 802.11 compatible and supports the same wireless standard as the NWA.
- 4 Make sure your computer (with a wireless adapter installed) is within the transmission range of the NWA.
- 5 Check that both the NWA and your wireless client are using the same wireless and wireless security settings.

Setting Up Your Computer's IP Address

Note: Your specific NWA may not support all of the operating systems described in this appendix. See the product specifications for more information about which operating systems are supported.

This appendix shows you how to configure the IP settings on your computer in order for it to be able to communicate with the other devices on your network. Windows Vista/XP/2000, Mac OS 9/ OS X, and all versions of UNIX/LINUX include the software components you need to use TCP/IP on your computer.

If you manually assign IP information instead of using a dynamic IP, make sure that your network's computers have IP addresses that place them in the same subnet.

In this appendix, you can set up an IP address for:

- Windows XP/NT/2000 on page 130
- Windows Vista on page 134
- Windows 7 on page 138
- Mac OS X: 10.3 and 10.4 on page 142
- Mac OS X: 10.5 and 10.6 on page 145
- Linux: Ubuntu 8 (GNOME) on page 148
- Linux: openSUSE 10.3 (KDE) on page 152

Windows XP/NT/2000

The following example uses the default Windows XP display theme but can also apply to Windows 2000 and Windows NT.

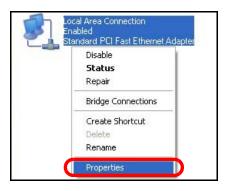

1 Click Start > Control Panel.

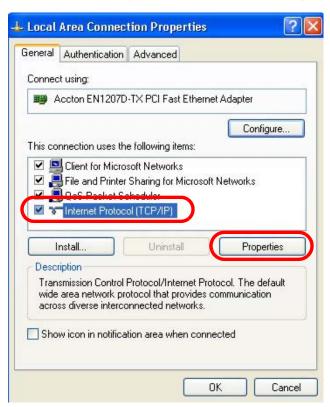

2 In the Control Panel, click the Network Connections icon.

3 Right-click Local Area Connection and then select Properties.

4 On the General tab, select Internet Protocol (TCP/IP) and then click Properties.

Internet Protocol (TCP/IP) Properties General Alternate Configuration You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings. Obtain an IP address automatically Use the following IP address: IP address: Subnet mask: Default gateway: Obtain DNS server address automatically Use the following DNS server addresses: Preferred DNS server: Alternate DNS server: Advanced... OK Cancel

5 The Internet Protocol TCP/IP Properties window opens.

- Select Obtain an IP address automatically if your network administrator or ISP assigns your IP address dynamically.
 - Select Use the following IP Address and fill in the IP address, Subnet mask, and Default gateway fields if you have a static IP address that was assigned to you by your network administrator or ISP. You may also have to enter a Preferred DNS server and an Alternate DNS server, if that information was provided.
- 7 Click OK to close the Internet Protocol (TCP/IP) Properties window.
- 8 Click OK to close the Local Area Connection Properties window.

Verifying Settings

- 1 Click Start > All Programs > Accessories > Command Prompt.
- 2 In the Command Prompt window, type "ipconfig" and then press [ENTER].
 - You can also go to **Start > Control Panel > Network Connections**, right-click a network connection, click **Status** and then click the **Support** tab to view your IP address and connection information.

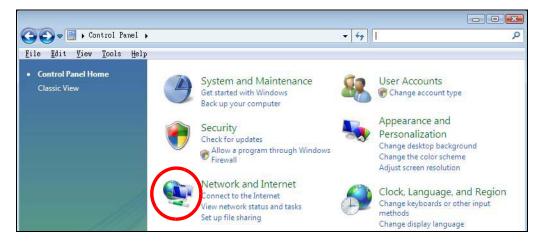

Windows Vista

This section shows screens from Windows Vista Professional.

1 Click Start > Control Panel.

2 In the Control Panel, click the Network and Internet icon.

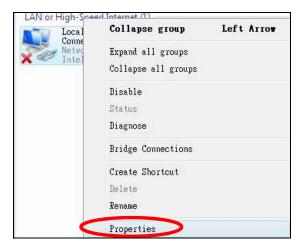

3 Click the Network and Sharing Center icon.

4 Click Manage network connections.

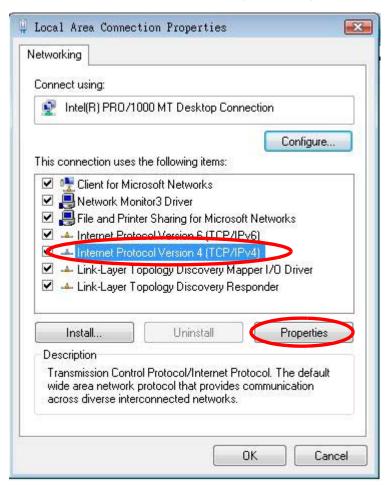

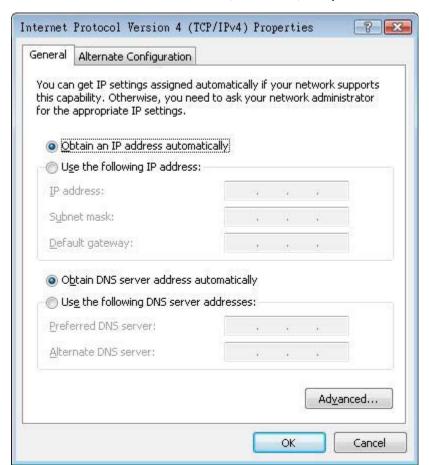

5 Right-click Local Area Connection and then select Properties.

Note: During this procedure, click **Continue** whenever Windows displays a screen saying that it needs your permission to continue.

6 Select Internet Protocol Version 4 (TCP/IPv4) and then select Properties.

7 The Internet Protocol Version 4 (TCP/IPv4) Properties window opens.

- 8 Select **Obtain an IP address automatically** if your network administrator or ISP assigns your IP address dynamically.
 - Select Use the following IP Address and fill in the IP address, Subnet mask, and Default gateway fields if you have a static IP address that was assigned to you by your network administrator or ISP. You may also have to enter a Preferred DNS server and an Alternate DNS server, if that information was provided. Click Advanced.
- 9 Click OK to close the Internet Protocol (TCP/IP) Properties window.
- 10 Click OK to close the Local Area Connection Properties window.

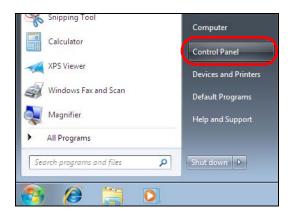

Verifying Settings

- 1 Click Start > All Programs > Accessories > Command Prompt.
- 2 In the Command Prompt window, type "ipconfig" and then press [ENTER].
 - You can also go to **Start > Control Panel > Network Connections**, right-click a network connection, click **Status** and then click the **Support** tab to view your IP address and connection information.

Windows 7

This section shows screens from Windows 7 Enterprise.

1 Click Start > Control Panel.

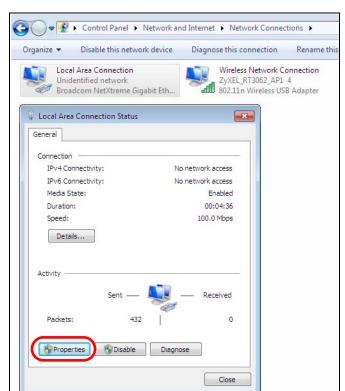

2 In the Control Panel, click View network status and tasks under the Network and Internet category.

3 Click Change adapter settings.

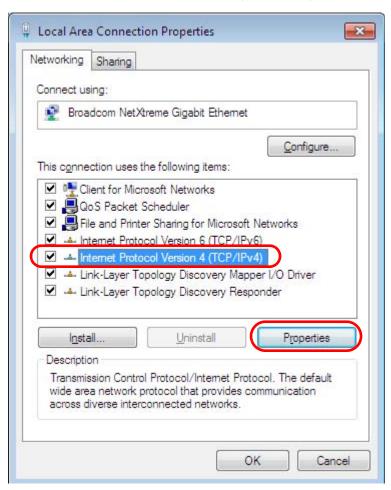

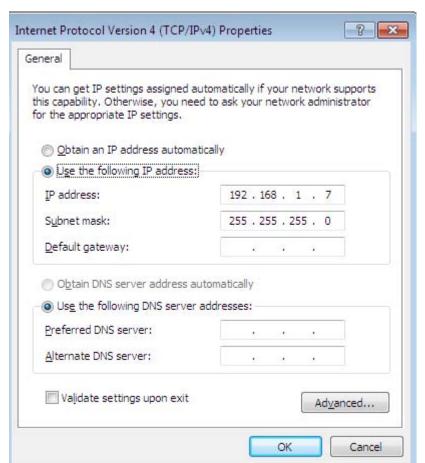

4 Double click Local Area Connection and then select Properties.

Note: During this procedure, click **Continue** whenever Windows displays a screen saying that it needs your permission to continue.

5 Select Internet Protocol Version 4 (TCP/IPv4) and then select Properties.

6 The Internet Protocol Version 4 (TCP/IPv4) Properties window opens.

7 Select **Obtain an IP address automatically** if your network administrator or ISP assigns your IP address dynamically.

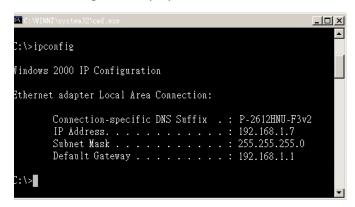

Select Use the following IP Address and fill in the IP address, Subnet mask, and Default gateway fields if you have a static IP address that was assigned to you by your network administrator or ISP. You may also have to enter a Preferred DNS server and an Alternate DNS server, if that information was provided. Click Advanced if you want to configure advanced settings for IP, DNS and WINS.

- 8 Click OK to close the Internet Protocol (TCP/IP) Properties window.
- 9 Click **OK** to close the **Local Area Connection Properties** window.

Verifying Settings

- 1 Click Start > All Programs > Accessories > Command Prompt.
- 2 In the Command Prompt window, type "ipconfig" and then press [ENTER].

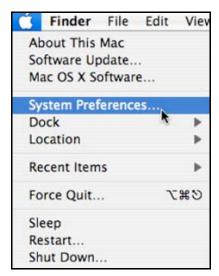

3 The IP settings are displayed as follows.

Mac OS X: 10.3 and 10.4

The screens in this section are from Mac OS X 10.4 but can also apply to 10.3.

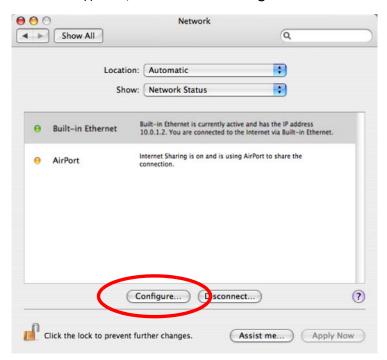

1 Click Apple > System Preferences.

2 In the System Preferences window, click the Network icon.

3 When the **Network** preferences pane opens, select **Built-in Ethernet** from the network connection type list, and then click **Configure**.

4 For dynamically assigned settings, select **Using DHCP** from the **Configure IPv4** list in the **TCP/IP** tab.

- For statically assigned settings, do the following:
 - From the Configure IPv4 list, select Manually.
 - In the IP Address field, type your IP address.
 - In the **Subnet Mask** field, type your subnet mask.
 - In the Router field, type the IP address of your device.

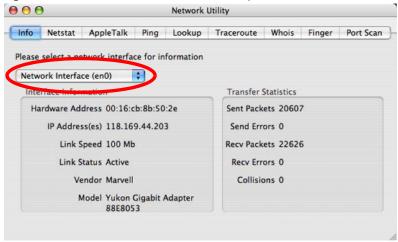

6 Click **Apply Now** and close the window.

Verifying Settings

Check your TCP/IP properties by clicking **Applications** > **Utilities** > **Network Utilities**, and then selecting the appropriate **Network Interface** from the **Info** tab.

Figure 75 Mac OS X 10.4: Network Utility

Mac OS X: 10.5 and 10.6

The screens in this section are from Mac OS X 10.5 but can also apply to 10.6.

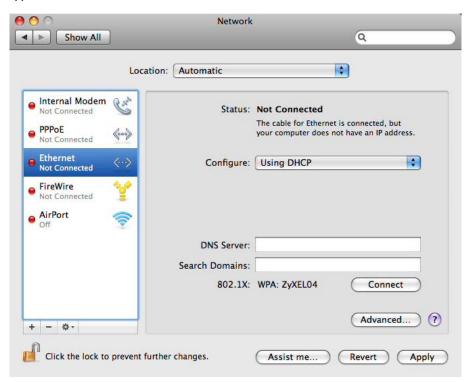

1 Click Apple > System Preferences.

2 In System Preferences, click the Network icon.

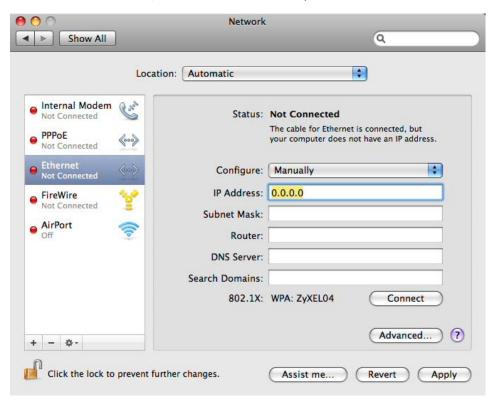

3 When the **Network** preferences pane opens, select **Ethernet** from the list of available connection types.

- 4 From the **Configure** list, select **Using DHCP** for dynamically assigned settings.
- **5** For statically assigned settings, do the following:

- From the Configure list, select Manually.
- In the IP Address field, enter your IP address.
- In the **Subnet Mask** field, enter your subnet mask.
- In the Router field, enter the IP address of your NWA.

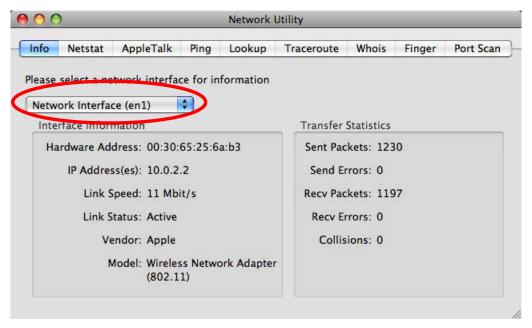

6 Click **Apply** and close the window.

Verifying Settings

Check your TCP/IP properties by clicking **Applications** > **Utilities** > **Network Utilities**, and then selecting the appropriate **Network interface** from the **Info** tab.

Figure 76 Mac OS X 10.5: Network Utility

Linux: Ubuntu 8 (GNOME)

This section shows you how to configure your computer's TCP/IP settings in the GNU Object Model Environment (GNOME) using the Ubuntu 8 Linux distribution. The procedure, screens and file locations may vary depending on your specific distribution, release version, and individual configuration. The following screens use the default Ubuntu 8 installation.

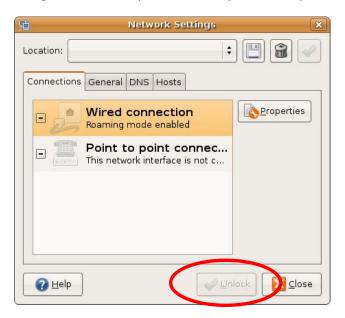

Note: Make sure you are logged in as the root administrator.

Follow the steps below to configure your computer IP address in GNOME:

1 Click System > Administration > Network.

2 When the **Network Settings** window opens, click **Unlock** to open the **Authenticate** window. (By default, the **Unlock** button is greyed out until clicked.) You cannot make changes to your configuration unless you first enter your admin password.

In the **Authenticate** window, enter your admin account name and password then click the **Authenticate** button.

4 In the **Network Settings** window, select the connection that you want to configure, then click **Properties**.

5 The **Properties** dialog box opens.

- In the **Configuration** list, select **Automatic Configuration (DHCP)** if you have a dynamic IP address.
- In the Configuration list, select Static IP address if you have a static IP address. Fill in the IP address, Subnet mask, and Gateway address fields.
- 6 Click **OK** to save the changes and close the **Properties** dialog box and return to the **Network Settings** screen.

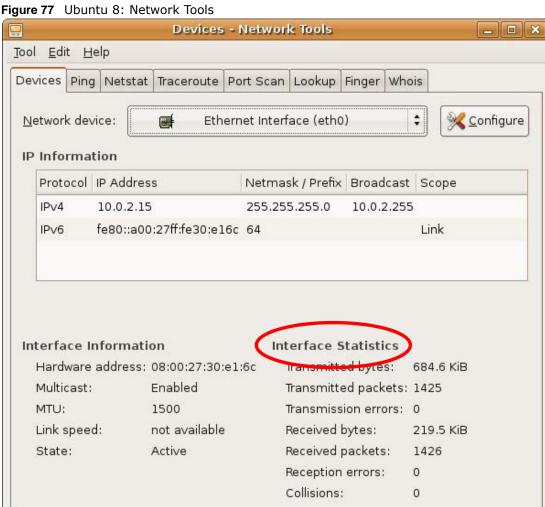

7 If you know your DNS server IP address(es), click the **DNS** tab in the **Network Settings** window and then enter the DNS server information in the fields provided.

8 Click the Close button to apply the changes.

Verifying Settings

Check your TCP/IP properties by clicking System > Administration > Network Tools, and then selecting the appropriate Network device from the Devices tab. The Interface Statistics column shows data if your connection is working properly.

Linux: openSUSE 10.3 (KDE)

This section shows you how to configure your computer's TCP/IP settings in the K Desktop Environment (KDE) using the openSUSE 10.3 Linux distribution. The procedure, screens and file locations may vary depending on your specific distribution, release version, and individual configuration. The following screens use the default openSUSE 10.3 installation.

Note: Make sure you are logged in as the root administrator.

Follow the steps below to configure your computer IP address in the KDE:

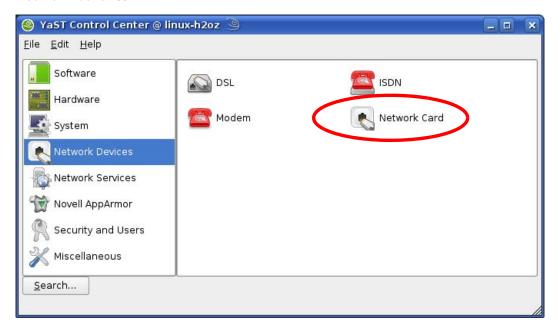

1 Click K Menu > Computer > Administrator Settings (YaST).

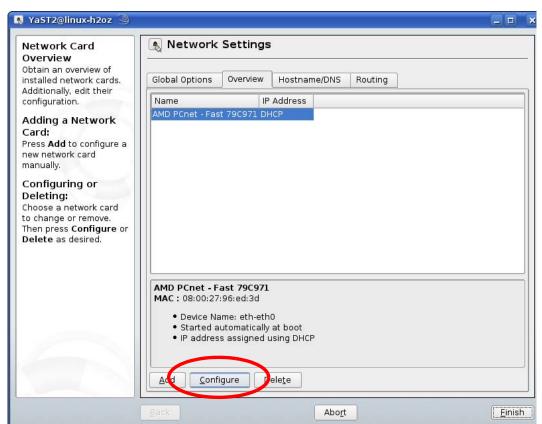

2 When the Run as Root - KDE su dialog opens, enter the admin password and click OK.

When the YaST Control Center window opens, select Network Devices and then click the Network Card icon.

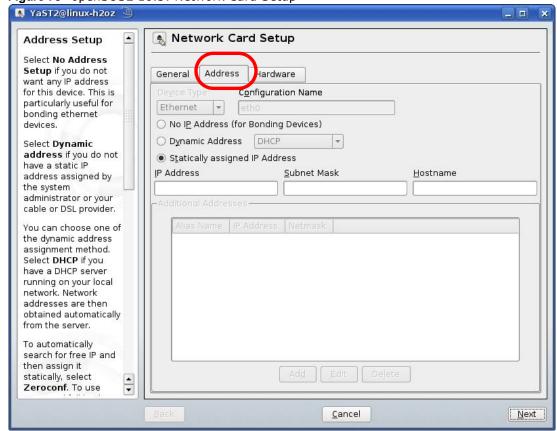

When the **Network Settings** window opens, click the **Overview** tab, select the appropriate connection **Name** from the list, and then click the **Configure** button.

154

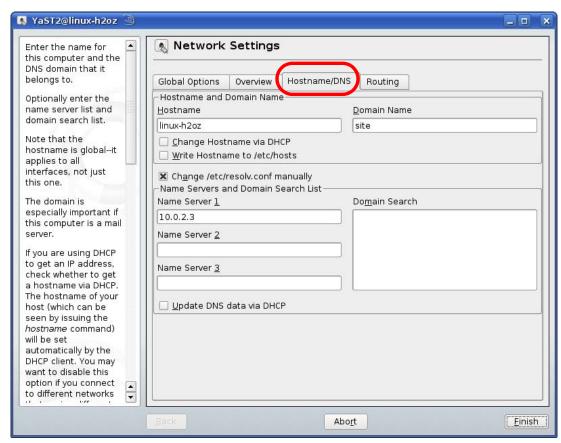

5 When the Network Card Setup window opens, click the Address tab

Figure 78 openSUSE 10.3: Network Card Setup

- 6 Select **Dynamic Address (DHCP)** if you have a dynamic IP address.
 - Select **Statically assigned IP Address** if you have a static IP address. Fill in the **IP address**, **Subnet mask**, and **Hostname** fields.
- 7 Click Next to save the changes and close the Network Card Setup window.

8 If you know your DNS server IP address(es), click the **Hostname/DNS** tab in **Network Settings** and then enter the DNS server information in the fields provided.

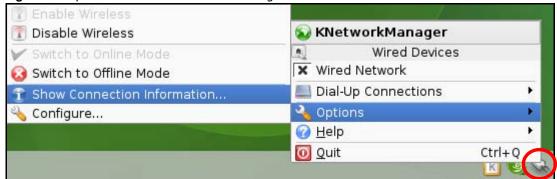

9 Click Finish to save your settings and close the window.

Verifying Settings

Click the **KNetwork Manager** icon on the **Task bar** to check your TCP/IP properties. From the **Options** sub-menu, select **Show Connection Information**.

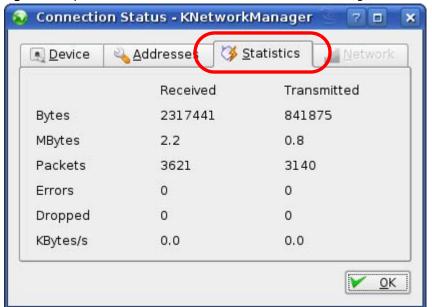

156

When the **Connection Status - KNetwork Manager** window opens, click the **Statistics tab** to see if your connection is working properly.

Figure 80 openSUSE: Connection Status - KNetwork Manager

Pop-up Windows, JavaScript and Java Permissions

In order to use the web configurator you need to allow:

- Web browser pop-up windows from your device.
- JavaScript (enabled by default).
- Java permissions (enabled by default).

Note: The screens used below belong to Internet Explorer version 6, 7 and 8. Screens for other Internet Explorer versions may vary.

Internet Explorer Pop-up Blockers

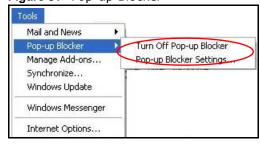

You may have to disable pop-up blocking to log into your device.

Either disable pop-up blocking (enabled by default in Windows XP SP (Service Pack) 2) or allow pop-up blocking and create an exception for your device's IP address.

Disable Pop-up Blockers

1 In Internet Explorer, select Tools, Pop-up Blocker and then select Turn Off Pop-up Blocker.

Figure 81 Pop-up Blocker

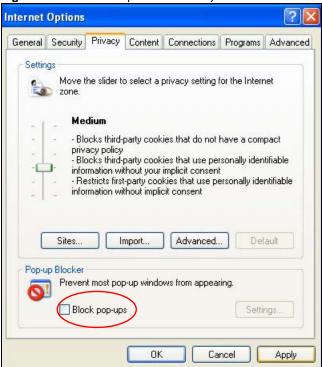

You can also check if pop-up blocking is disabled in the Pop-up Blocker section in the Privacy tab.

1 In Internet Explorer, select Tools, Internet Options, Privacy.

2 Clear the **Block pop-ups** check box in the **Pop-up Blocker** section of the screen. This disables any web pop-up blockers you may have enabled.

Figure 82 Internet Options: Privacy

3 Click Apply to save this setting.

Enable Pop-up Blockers with Exceptions

Alternatively, if you only want to allow pop-up windows from your device, see the following steps.

1 In Internet Explorer, select **Tools**, **Internet Options** and then the **Privacy** tab.

2 Select Settings...to open the Pop-up Blocker Settings screen.

Figure 83 Internet Options: Privacy

3 Type the IP address of your device (the web page that you do not want to have blocked) with the prefix "http://". For example, http://192.168.167.1.

4 Click Add to move the IP address to the list of Allowed sites.

Figure 84 Pop-up Blocker Settings

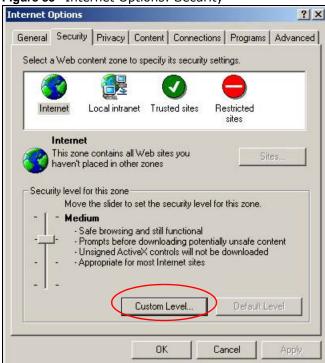

- 5 Click Close to return to the Privacy screen.
- 6 Click **Apply** to save this setting.

JavaScript

If pages of the web configurator do not display properly in Internet Explorer, check that JavaScript are allowed.

1 In Internet Explorer, click Tools, Internet Options and then the Security tab.

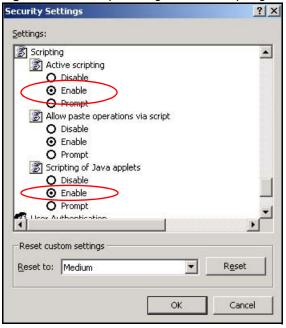

Figure 85 Internet Options: Security

- 2 Click the Custom Level... button.
- 3 Scroll down to Scripting.
- 4 Under **Active scripting** make sure that **Enable** is selected (the default).
- 5 Under Scripting of Java applets make sure that Enable is selected (the default).

6 Click **OK** to close the window.

Figure 86 Security Settings - Java Scripting

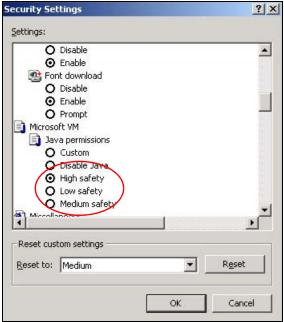

Java Permissions

- 1 From Internet Explorer, click **Tools**, **Internet Options** and then the **Security** tab.
- 2 Click the Custom Level... button.
- 3 Scroll down to Microsoft VM.
- 4 Under Java permissions make sure that a safety level is selected.

5 Click **OK** to close the window.

Figure 87 Security Settings - Java

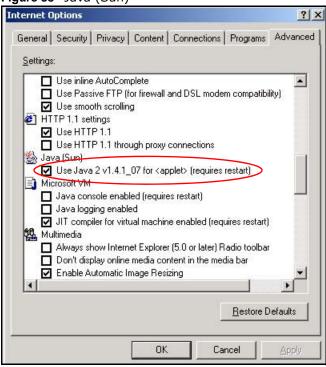

JAVA (Sun)

- 1 From Internet Explorer, click **Tools**, **Internet Options** and then the **Advanced** tab.
- 2 Make sure that **Use Java 2 for <applet>** under **Java (Sun)** is selected.

3 Click **OK** to close the window.

Figure 88 Java (Sun)

Mozilla Firefox

Mozilla Firefox 2.0 screens are used here. Screens for other versions may vary slightly. The steps below apply to Mozilla Firefox 3.0 as well.

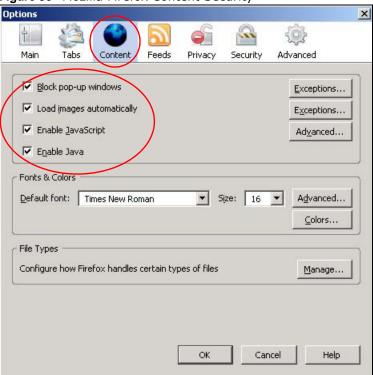

You can enable Java, Javascript and pop-ups in one screen. Click **Tools**, then click **Options** in the screen that appears.

Figure 89 Mozilla Firefox: TOOLS > Options

Click **Content** to show the screen below. Select the check boxes as shown in the following screen.

Figure 90 Mozilla Firefox Content Security

Opera

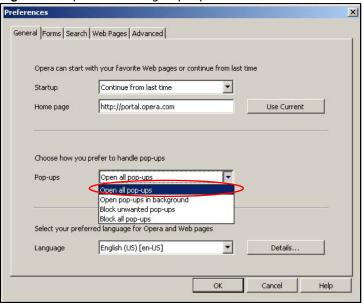

Opera 10 screens are used here. Screens for other versions may vary slightly.

166

Allowing Pop-Ups

From Opera, click **Tools**, then **Preferences**. In the **General** tab, go to **Choose how you prefer to handle pop-ups** and select **Open all pop-ups**.

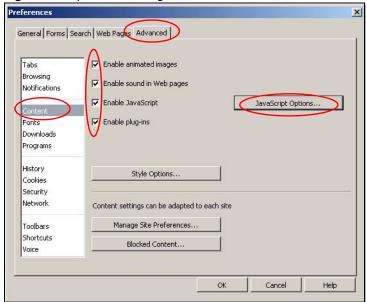

Figure 91 Opera: Allowing Pop-Ups

Enabling Java

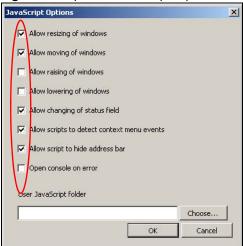

From Opera, click **Tools**, then **Preferences**. In the **Advanced** tab, select **Content** from the left-side menu. Select the check boxes as shown in the following screen.

Figure 92 Opera: Enabling Java

To customize JavaScript behavior in the Opera browser, click JavaScript Options.

Figure 93 Opera: JavaScript Options

Select the items you want Opera's JavaScript to apply.

IP Addresses and Subnetting

This appendix introduces IP addresses and subnet masks.

IP addresses identify individual devices on a network. Every networking device (including computers, servers, routers, printers, etc.) needs an IP address to communicate across the network. These networking devices are also known as hosts.

Subnet masks determine the maximum number of possible hosts on a network. You can also use subnet masks to divide one network into multiple sub-networks.

Introduction to IP Addresses

One part of the IP address is the network number, and the other part is the host ID. In the same way that houses on a street share a common street name, the hosts on a network share a common network number. Similarly, as each house has its own house number, each host on the network has its own unique identifying number - the host ID. Routers use the network number to send packets to the correct network, while the host ID determines to which host on the network the packets are delivered.

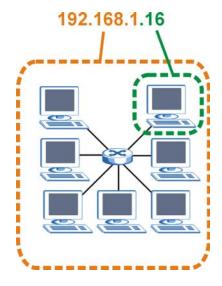

Structure

An IP address is made up of four parts, written in dotted decimal notation (for example, 192.168.1.1). Each of these four parts is known as an octet. An octet is an eight-digit binary number (for example 11000000, which is 192 in decimal notation).

Therefore, each octet has a possible range of 00000000 to 11111111 in binary, or 0 to 255 in decimal.

The following figure shows an example IP address in which the first three octets (192.168.1) are the network number, and the fourth octet (16) is the host ID.

Figure 94 Network Number and Host ID

How much of the IP address is the network number and how much is the host ID varies according to the subnet mask.

Subnet Masks

A subnet mask is used to determine which bits are part of the network number, and which bits are part of the host ID (using a logical AND operation). The term "subnet" is short for "sub-network".

A subnet mask has 32 bits. If a bit in the subnet mask is a "1" then the corresponding bit in the IP address is part of the network number. If a bit in the subnet mask is "0" then the corresponding bit in the IP address is part of the host ID.

The following example shows a subnet mask identifying the network number (in bold text) and host ID of an IP address (192.168.1.2 in decimal).

Table 45 Subnet Masks

	1ST OCTET:	2ND OCTET:	3RD OCTET:	4TH OCTET
	(192)	(168)	(1)	(2)
IP Address (Binary)	11000000	10101000	0000001	0000010
Subnet Mask (Binary)	11111111	11111111	11111111	00000000
Network Number	11000000	10101000	0000001	
Host ID				00000010

By convention, subnet masks always consist of a continuous sequence of ones beginning from the leftmost bit of the mask, followed by a continuous sequence of zeros, for a total number of 32 bits.

Subnet masks can be referred to by the size of the network number part (the bits with a "1" value). For example, an "8-bit mask" means that the first 8 bits of the mask are ones and the remaining 24 bits are zeroes.

Subnet masks are expressed in dotted decimal notation just like IP addresses. The following examples show the binary and decimal notation for 8-bit, 16-bit, 24-bit and 29-bit subnet masks.

Table 46 Subnet Masks

	BINARY				
	1ST OCTET	2ND OCTET	3RD OCTET	4TH OCTET	DECIMAL
8-bit mask	11111111	00000000	00000000	00000000	255.0.0.0
16-bit mask	11111111	11111111	00000000	00000000	255.255.0.0
24-bit mask	11111111	11111111	11111111	00000000	255.255.255.0
29-bit mask	11111111	11111111	11111111	11111000	255.255.255.248

Network Size

The size of the network number determines the maximum number of possible hosts you can have on your network. The larger the number of network number bits, the smaller the number of remaining host ID bits.

An IP address with host IDs of all zeros is the IP address of the network (192.168.1.0 with a 24-bit subnet mask, for example). An IP address with host IDs of all ones is the broadcast address for that network (192.168.1.255 with a 24-bit subnet mask, for example).

As these two IP addresses cannot be used for individual hosts, calculate the maximum number of possible hosts in a network as follows:

Table 47 Maximum Host Numbers

SUBNET	MASK	HOST ID SIZE		MAXIMUM NUMBER OF HOSTS
8 bits	255.0.0.0	24 bits	2 ²⁴ – 2	16777214
16 bits	255.255.0.0	16 bits	2 ¹⁶ – 2	65534
24 bits	255.255.255.0	8 bits	2 ⁸ – 2	254
29 bits	255.255.255.24 8	3 bits	2 ³ – 2	6

Notation

Since the mask is always a continuous number of ones beginning from the left, followed by a continuous number of zeros for the remainder of the 32 bit mask, you can simply specify the number of ones instead of writing the value of each octet. This is usually specified by writing a "/" followed by the number of bits in the mask after the address.

For example, 192.1.1.0 /25 is equivalent to saying 192.1.1.0 with subnet mask 255.255.255.128.

The following table shows some possible subnet masks using both notations.

Table 48 Alternative Subnet Mask Notation

SUBNET MASK	ALTERNATIVE NOTATION	LAST OCTET (BINARY)	LAST OCTET (DECIMAL)
255.255.255.0	/24	0000 0000	0
255.255.255.128	/25	1000 0000	128
255.255.255.192	/26	1100 0000	192
255.255.255.224	/27	1110 0000	224
255.255.255.240	/28	1111 0000	240
255.255.255.248	/29	1111 1000	248
255.255.255.252	/30	1111 1100	252

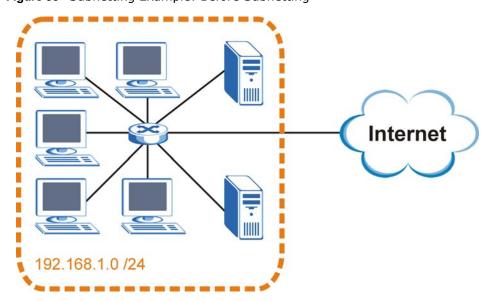

Subnetting

You can use subnetting to divide one network into multiple sub-networks. In the following example a network administrator creates two sub-networks to isolate a group of servers from the rest of the company network for security reasons.

In this example, the company network address is 192.168.1.0. The first three octets of the address (192.168.1) are the network number, and the remaining octet is the host ID, allowing a maximum of $2^8 - 2$ or 254 possible hosts.

The following figure shows the company network before subnetting.

Figure 95 Subnetting Example: Before Subnetting

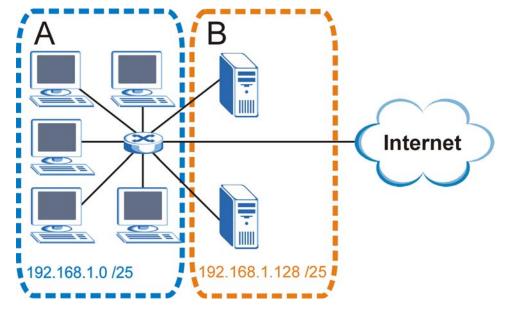

You can "borrow" one of the host ID bits to divide the network 192.168.1.0 into two separate subnetworks. The subnet mask is now 25 bits (255.255.255.128 or /25).

The "borrowed" host ID bit can have a value of either 0 or 1, allowing two subnets; 192.168.1.0/25 and 192.168.1.128/25.

The following figure shows the company network after subnetting. There are now two subnetworks, **A** and **B**.

Figure 96 Subnetting Example: After Subnetting

In a 25-bit subnet the host ID has 7 bits, so each sub-network has a maximum of 2^7 – 2 or 126 possible hosts (a host ID of all zeroes is the subnet's address itself, all ones is the subnet's broadcast address).

192.168.1.0 with mask 255.255.255.128 is subnet $\bf A$ itself, and 192.168.1.127 with mask 255.255.255.128 is its broadcast address. Therefore, the lowest IP address that can be assigned to an actual host for subnet $\bf A$ is 192.168.1.1 and the highest is 192.168.1.126.

Similarly, the host ID range for subnet **B** is 192.168.1.129 to 192.168.1.254.

Example: Four Subnets

Each subnet contains 6 host ID bits, giving 2^6 - 2 or 62 hosts for each subnet (a host ID of all zeroes is the subnet itself, all ones is the subnet's broadcast address).

Table 49 Subnet 1

IP/SUBNET MASK NETWORK NUMBER		LAST OCTET BIT VALUE
IP Address (Decimal)	192.168.1.	0
IP Address (Binary)	11000000.10101000.00000001.	00 000000
Subnet Mask (Binary)	11111111.111111111.111111111.	11000000

 Table 49

IP/SUBNET MASK	NETWORK NUMBER	LAST OCTET BIT VALUE
Subnet Address: 192.168.1.0	Lowest Host ID: 192.168.1.1	
Broadcast Address: 192.168.1.63	Highest Host ID: 192.168.1.62	

Table 50 Subnet 2

IP/SUBNET MASK	NETWORK NUMBER	LAST OCTET BIT VALUE
IP Address	192.168.1.	64
IP Address (Binary)	11000000.10101000.00000001.	01 000000
Subnet Mask (Binary)	11111111.111111111.111111111.	11000000
Subnet Address: 192.168.1.64	Lowest Host ID: 192.168.1.65	
Broadcast Address: 192.168.1.127	Highest Host ID: 192.168.1.126	

Table 51 Subnet 3

IP/SUBNET MASK	NETWORK NUMBER	LAST OCTET BIT VALUE
IP Address	192.168.1.	128
IP Address (Binary)	11000000.10101000.00000001.	10 000000
Subnet Mask (Binary)	11111111.111111111.11111111.	11000000
Subnet Address: 192.168.1.128	Lowest Host ID: 192.168.1.129	
Broadcast Address: 192.168.1.191	Highest Host ID: 192.168.1.190	

Table 52 Subnet 4

IP/SUBNET MASK	NETWORK NUMBER	LAST OCTET BIT VALUE
IP Address	192.168.1.	192
IP Address (Binary)	11000000.10101000.00000001.	11000000
Subnet Mask (Binary)	11111111.111111111.11111111.	11000000
Subnet Address: 192.168.1.192	Lowest Host ID: 192.168.1.193	
Broadcast Address: 192.168.1.255	Highest Host ID: 192.168.1.254	

Example: Eight Subnets

Similarly, use a 27-bit mask to create eight subnets (000, 001, 010, 011, 100, 101, 110 and 111).

The following table shows IP address last octet values for each subnet.

Table 53 Eight Subnets

SUBNET	SUBNET ADDRESS	FIRST ADDRESS	LAST ADDRESS	BROADCAST ADDRESS
1	0	1	30	31
2	32	33	62	63
3	64	65	94	95
4	96	97	126	127
5	128	129	158	159
6	160	161	190	191
7	192	193	222	223
8	224	225	254	255

Subnet Planning

The following table is a summary for subnet planning on a network with a 24-bit network number.

Table 54 24-bit Network Number Subnet Planning

NO. "BORROWED" HOST BITS	SUBNET MASK	NO. SUBNETS	NO. HOSTS PER SUBNET
1	255.255.255.128 (/25)	2	126
2	255.255.255.192 (/26)	4	62
3	255.255.255.224 (/27)	8	30
4	255.255.255.240 (/28)	16	14
5	255.255.255.248 (/29)	32	6
6	255.255.255.252 (/30)	64	2
7	255.255.255.254 (/31)	128	1

The following table is a summary for subnet planning on a network with a 16-bit network number.

 Table 55
 16-bit Network Number Subnet Planning

NO. "BORROWED" HOST BITS	SUBNET MASK	NO. SUBNETS	NO. HOSTS PER SUBNET
1	255.255.128.0 (/17)	2	32766
2	255.255.192.0 (/18)	4	16382
3	255.255.224.0 (/19)	8	8190
4	255.255.240.0 (/20)	16	4094
5	255.255.248.0 (/21)	32	2046
6	255.255.252.0 (/22)	64	1022
7	255.255.254.0 (/23)	128	510

9	255.255.255.128 (/25)	512	126
10	255.255.255.192 (/26)	1024	62
11	255.255.255.224 (/27)	2048	30
12	255.255.255.240 (/28)	4096	14

Table 55 16-bit Netwo	rk Number Subnet	Planning	(continued)
-----------------------	------------------	----------	-------------

NO. "BORROWED" HOST BITS	SUBNET MASK	NO. SUBNETS	NO. HOSTS PER SUBNET
13	255.255.255.248 (/29)	8192	6
14	255.255.255.252 (/30)	16384	2
15	255.255.255.254 (/31)	32768	1

Configuring IP Addresses

Where you obtain your network number depends on your particular situation. If the ISP or your network administrator assigns you a block of registered IP addresses, follow their instructions in selecting the IP addresses and the subnet mask.

If the ISP did not explicitly give you an IP network number, then most likely you have a single user account and the ISP will assign you a dynamic IP address when the connection is established. If this is the case, it is recommended that you select a network number from 192.168.0.0 to 192.168.255.0. The Internet Assigned Number Authority (IANA) reserved this block of addresses specifically for private use; please do not use any other number unless you are told otherwise. You must also enable Network Address Translation (NAT) on the NWA.

Once you have decided on the network number, pick an IP address for your NWA that is easy to remember (for instance, 192.168.1.1) but make sure that no other device on your network is using that IP address.

The subnet mask specifies the network number portion of an IP address. Your NWA will compute the subnet mask automatically based on the IP address that you entered. You don't need to change the subnet mask computed by the NWA unless you are instructed to do otherwise.

Private IP Addresses

Every machine on the Internet must have a unique address. If your networks are isolated from the Internet (running only between two branch offices, for example) you can assign any IP addresses to the hosts without problems. However, the Internet Assigned Numbers Authority (IANA) has reserved the following three blocks of IP addresses specifically for private networks:

- 10.0.0.0 10.255.255.255
- 172.16.0.0 172.31.255.255
- 192.168.0.0 192.168.255.255

You can obtain your IP address from the IANA, from an ISP, or it can be assigned from a private network. If you belong to a small organization and your Internet access is through an ISP, the ISP can provide you with the Internet addresses for your local networks. On the other hand, if you are part of a much larger organization, you should consult your network administrator for the appropriate IP addresses.

Regardless of your particular situation, do not create an arbitrary IP address; always follow the guidelines above. For more information on address assignment, please refer to RFC 1597, *Address Allocation for Private Internets* and RFC 1466, *Guidelines for Management of IP Address Space*.

Wireless LANs

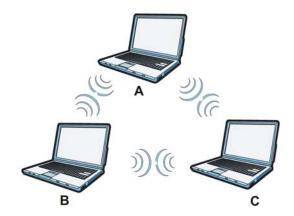

Wireless LAN Topologies

This section discusses ad-hoc and infrastructure wireless LAN topologies.

Ad-hoc Wireless LAN Configuration

The simplest WLAN configuration is an independent (Ad-hoc) WLAN that connects a set of computers with wireless adapters (A, B, C). Any time two or more wireless adapters are within range of each other, they can set up an independent network, which is commonly referred to as an ad-hoc network or Independent Basic Service Set (IBSS). The following diagram shows an example of notebook computers using wireless adapters to form an ad-hoc wireless LAN.

Figure 97 Peer-to-Peer Communication in an Ad-hoc Network

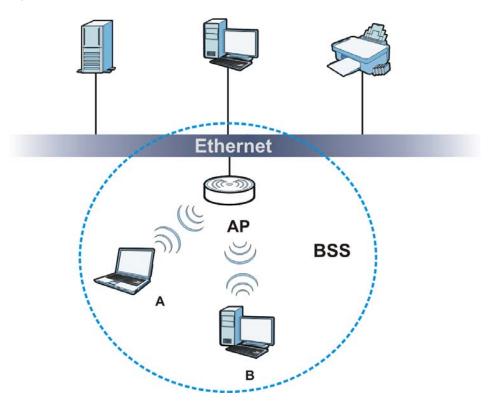

BSS

A Basic Service Set (BSS) exists when all communications between wireless clients or between a wireless client and a wired network client go through one access point (AP).

Intra-BSS traffic is traffic between wireless clients in the BSS. When Intra-BSS is enabled, wireless client **A** and **B** can access the wired network and communicate with each other. When Intra-BSS is

disabled, wireless client **A** and **B** can still access the wired network but cannot communicate with each other.

Figure 98 Basic Service Set

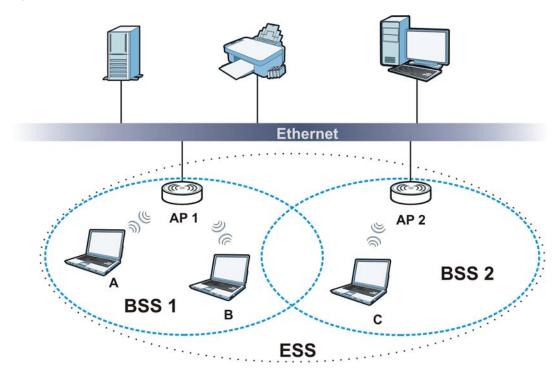

ESS

An Extended Service Set (ESS) consists of a series of overlapping BSSs, each containing an access point, with each access point connected together by a wired network. This wired connection between APs is called a Distribution System (DS).

This type of wireless LAN topology is called an Infrastructure WLAN. The Access Points not only provide communication with the wired network but also mediate wireless network traffic in the immediate neighborhood.

An ESSID (ESS IDentification) uniquely identifies each ESS. All access points and their associated wireless clients within the same ESS must have the same ESSID in order to communicate.

Figure 99 Infrastructure WLAN

Channel

A channel is the radio frequency(ies) used by wireless devices to transmit and receive data. Channels available depend on your geographical area. You may have a choice of channels (for your region) so you should use a channel different from an adjacent AP (access point) to reduce interference. Interference occurs when radio signals from different access points overlap causing interference and degrading performance.

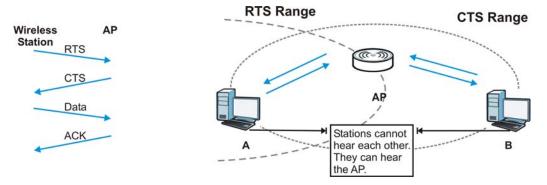

Adjacent channels partially overlap however. To avoid interference due to overlap, your AP should be on a channel at least five channels away from a channel that an adjacent AP is using. For example, if your region has 11 channels and an adjacent AP is using channel 1, then you need to select a channel between 6 or 11.

RTS/CTS

A hidden node occurs when two stations are within range of the same access point, but are not within range of each other. The following figure illustrates a hidden node. Both stations (STA) are within range of the access point (AP) or wireless gateway, but out-of-range of each other, so they

cannot "hear" each other, that is they do not know if the channel is currently being used. Therefore, they are considered hidden from each other.

Figure 100 RTS/CTS

When station **A** sends data to the AP, it might not know that the station **B** is already using the channel. If these two stations send data at the same time, collisions may occur when both sets of data arrive at the AP at the same time, resulting in a loss of messages for both stations.

RTS/CTS is designed to prevent collisions due to hidden nodes. An RTS/CTS defines the biggest size data frame you can send before an RTS (Request To Send)/CTS (Clear to Send) handshake is invoked.

When a data frame exceeds the RTS/CTS value you set (between 0 to 2432 bytes), the station that wants to transmit this frame must first send an RTS (Request To Send) message to the AP for permission to send it. The AP then responds with a CTS (Clear to Send) message to all other stations within its range to notify them to defer their transmission. It also reserves and confirms with the requesting station the time frame for the requested transmission.

Stations can send frames smaller than the specified **RTS/CTS** directly to the AP without the RTS (Request To Send)/CTS (Clear to Send) handshake.

You should only configure RTS/CTS if the possibility of hidden nodes exists on your network and the "cost" of resending large frames is more than the extra network overhead involved in the RTS (Request To Send)/CTS (Clear to Send) handshake.

If the RTS/CTS value is greater than the Fragmentation Threshold value (see next), then the RTS (Request To Send)/CTS (Clear to Send) handshake will never occur as data frames will be fragmented before they reach RTS/CTS size.

Note: Enabling the RTS Threshold causes redundant network overhead that could negatively affect the throughput performance instead of providing a remedy.

Fragmentation Threshold

A **Fragmentation Threshold** is the maximum data fragment size (between 256 and 2432 bytes) that can be sent in the wireless network before the AP will fragment the packet into smaller data frames.

A large **Fragmentation Threshold** is recommended for networks not prone to interference while you should set a smaller threshold for busy networks or networks that are prone to interference.

If the **Fragmentation Threshold** value is smaller than the **RTS/CTS** value (see previously) you set then the RTS (Request To Send)/CTS (Clear to Send) handshake will never occur as data frames will be fragmented before they reach **RTS/CTS** size.

Preamble Type

Preamble is used to signal that data is coming to the receiver. Short and long refer to the length of the synchronization field in a packet.

Short preamble increases performance as less time sending preamble means more time for sending data. All IEEE 802.11 compliant wireless adapters support long preamble, but not all support short preamble.

Use long preamble if you are unsure what preamble mode other wireless devices on the network support, and to provide more reliable communications in busy wireless networks.

Use short preamble if you are sure all wireless devices on the network support it, and to provide more efficient communications.

Use the dynamic setting to automatically use short preamble when all wireless devices on the network support it, otherwise the NWA uses long preamble.

Note: The wireless devices MUST use the same preamble mode in order to communicate.

IEEE 802.11g Wireless LAN

IEEE 802.11g is fully compatible with the IEEE 802.11b standard. This means an IEEE 802.11b adapter can interface directly with an IEEE 802.11g access point (and vice versa) at 11 Mbps or lower depending on range. IEEE 802.11g has several intermediate rate steps between the maximum and minimum data rates. The IEEE 802.11g data rate and modulation are as follows:

Table 56 IEEE 802.11a

	Ī.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
DATA RATE (MBPS)	MODULATION
1	DBPSK (Differential Binary Phase Shift Keyed)
2	DQPSK (Differential Quadrature Phase Shift Keying)
5.5 / 11	CCK (Complementary Code Keying)
6/9/12/18/24/36/48/ 54	OFDM (Orthogonal Frequency Division Multiplexing)

Wireless Security Overview

Wireless security is vital to your network to protect wireless communication between wireless clients, access points and the wired network.

Wireless security methods available on the NWA are data encryption, wireless client authentication, restricting access by device MAC address and hiding the NWA identity.

The following figure shows the relative effectiveness of these wireless security methods available on your NWA.

Table 57 Wireless Security Levels

SECURITY LEVEL	SECURITY TYPE
Least	Unique SSID (Default)
Secure	Unique SSID with Hide SSID Enabled
	MAC Address Filtering
	WEP Encryption
	IEEE802.1x EAP with RADIUS Server Authentication
	Wi-Fi Protected Access (WPA)
	WPA2
Most Secure	

Note: You must enable the same wireless security settings on the NWA and on all wireless clients that you want to associate with it.

IEEE 802.1x

In June 2001, the IEEE 802.1x standard was designed to extend the features of IEEE 802.11 to support extended authentication as well as providing additional accounting and control features. It is supported by Windows XP and a number of network devices. Some advantages of IEEE 802.1x are:

- User based identification that allows for roaming.
- Support for RADIUS (Remote Authentication Dial In User Service, RFC 2138, 2139) for centralized user profile and accounting management on a network RADIUS server.
- Support for EAP (Extensible Authentication Protocol, RFC 2486) that allows additional authentication methods to be deployed with no changes to the access point or the wireless clients.

RADIUS

RADIUS is based on a client-server model that supports authentication, authorization and accounting. The access point is the client and the server is the RADIUS server. The RADIUS server handles the following tasks:

Authentication

Determines the identity of the users.

Authorization

Determines the network services available to authenticated users once they are connected to the network.

Accounting

Keeps track of the client's network activity.

RADIUS is a simple package exchange in which your AP acts as a message relay between the wireless client and the network RADIUS server.

Types of RADIUS Messages

The following types of RADIUS messages are exchanged between the access point and the RADIUS server for user authentication:

· Access-Request

Sent by an access point requesting authentication.

· Access-Reject

Sent by a RADIUS server rejecting access.

Access-Accept

Sent by a RADIUS server allowing access.

• Access-Challenge

Sent by a RADIUS server requesting more information in order to allow access. The access point sends a proper response from the user and then sends another Access-Request message.

The following types of RADIUS messages are exchanged between the access point and the RADIUS server for user accounting:

Accounting-Request

Sent by the access point requesting accounting.

Accounting-Response

Sent by the RADIUS server to indicate that it has started or stopped accounting.

In order to ensure network security, the access point and the RADIUS server use a shared secret key, which is a password, they both know. The key is not sent over the network. In addition to the shared key, password information exchanged is also encrypted to protect the network from unauthorized access.

Types of EAP Authentication

This section discusses some popular authentication types: EAP-MD5, EAP-TLS, EAP-TTLS, PEAP and LEAP. Your wireless LAN device may not support all authentication types.

EAP (Extensible Authentication Protocol) is an authentication protocol that runs on top of the IEEE 802.1x transport mechanism in order to support multiple types of user authentication. By using EAP to interact with an EAP-compatible RADIUS server, an access point helps a wireless station and a RADIUS server perform authentication.

The type of authentication you use depends on the RADIUS server and an intermediary AP(s) that supports IEEE 802.1x.

For EAP-TLS authentication type, you must first have a wired connection to the network and obtain the certificate(s) from a certificate authority (CA). A certificate (also called digital IDs) can be used to authenticate users and a CA issues certificates and guarantees the identity of each certificate owner.

EAP-MD5 (Message-Digest Algorithm 5)

MD5 authentication is the simplest one-way authentication method. The authentication server sends a challenge to the wireless client. The wireless client 'proves' that it knows the password by encrypting the password with the challenge and sends back the information. Password is not sent in plain text.

However, MD5 authentication has some weaknesses. Since the authentication server needs to get the plaintext passwords, the passwords must be stored. Thus someone other than the authentication server may access the password file. In addition, it is possible to impersonate an authentication server as MD5 authentication method does not perform mutual authentication. Finally, MD5 authentication method does not support data encryption with dynamic session key. You must configure WEP encryption keys for data encryption.

EAP-TLS (Transport Layer Security)

With EAP-TLS, digital certifications are needed by both the server and the wireless clients for mutual authentication. The server presents a certificate to the client. After validating the identity of the server, the client sends a different certificate to the server. The exchange of certificates is done in the open before a secured tunnel is created. This makes user identity vulnerable to passive attacks. A digital certificate is an electronic ID card that authenticates the sender's identity. However, to implement EAP-TLS, you need a Certificate Authority (CA) to handle certificates, which imposes a management overhead.

EAP-TTLS (Tunneled Transport Layer Service)

EAP-TTLS is an extension of the EAP-TLS authentication that uses certificates for only the serverside authentications to establish a secure connection. Client authentication is then done by sending username and password through the secure connection, thus client identity is protected. For client authentication, EAP-TTLS supports EAP methods and legacy authentication methods such as PAP, CHAP, MS-CHAP and MS-CHAP v2.

PEAP (Protected EAP)

Like EAP-TTLS, server-side certificate authentication is used to establish a secure connection, then use simple username and password methods through the secured connection to authenticate the clients, thus hiding client identity. However, PEAP only supports EAP methods, such as EAP-MD5, EAP-MSCHAPv2 and EAP-GTC (EAP-Generic Token Card), for client authentication. EAP-GTC is implemented only by Cisco.

LEAP

LEAP (Lightweight Extensible Authentication Protocol) is a Cisco implementation of IEEE 802.1x.

Dynamic WEP Key Exchange

The AP maps a unique key that is generated with the RADIUS server. This key expires when the wireless connection times out, disconnects or reauthentication times out. A new WEP key is generated each time reauthentication is performed.

If this feature is enabled, it is not necessary to configure a default encryption key in the wireless security configuration screen. You may still configure and store keys, but they will not be used while dynamic WEP is enabled.

Note: EAP-MD5 cannot be used with Dynamic WEP Key Exchange

For added security, certificate-based authentications (EAP-TLS, EAP-TTLS and PEAP) use dynamic keys for data encryption. They are often deployed in corporate environments, but for public deployment, a simple user name and password pair is more practical. The following table is a comparison of the features of authentication types.

Table 58 Comparison of EAP Authentication Types

	EAP-MD5	EAP-TLS	EAP-TTLS	PEAP	LEAP
Mutual Authentication	No	Yes	Yes	Yes	Yes
Certificate – Client	No	Yes	Optional	Optional	No
Certificate – Server	No	Yes	Yes	Yes	No
Dynamic Key Exchange	No	Yes	Yes	Yes	Yes
Credential Integrity	None	Strong	Strong	Strong	Moderate
Deployment Difficulty	Easy	Hard	Moderate	Moderate	Moderate
Client Identity Protection	No	No	Yes	Yes	No

WPA and WPA2

Wi-Fi Protected Access (WPA) is a subset of the IEEE 802.11i standard. WPA2 (IEEE 802.11i) is a wireless security standard that defines stronger encryption, authentication and key management than WPA.

Key differences between WPA or WPA2 and WEP are improved data encryption and user authentication.

If both an AP and the wireless clients support WPA2 and you have an external RADIUS server, use WPA2 for stronger data encryption. If you don't have an external RADIUS server, you should use WPA2-PSK (WPA2-Pre-Shared Key) that only requires a single (identical) password entered into each access point, wireless gateway and wireless client. As long as the passwords match, a wireless client will be granted access to a WLAN.

If the AP or the wireless clients do not support WPA2, just use WPA or WPA-PSK depending on whether you have an external RADIUS server or not.

Select WEP only when the AP and/or wireless clients do not support WPA or WPA2. WEP is less secure than WPA or WPA2.

Encryption

WPA improves data encryption by using Temporal Key Integrity Protocol (TKIP), Message Integrity Check (MIC) and IEEE 802.1x. WPA2 also uses TKIP when required for compatibility reasons, but offers stronger encryption than TKIP with Advanced Encryption Standard (AES) in the Counter mode with Cipher block chaining Message authentication code Protocol (CCMP).

TKIP uses 128-bit keys that are dynamically generated and distributed by the authentication server. AES (Advanced Encryption Standard) is a block cipher that uses a 256-bit mathematical algorithm

called Rijndael. They both include a per-packet key mixing function, a Message Integrity Check (MIC) named Michael, an extended initialization vector (IV) with sequencing rules, and a re-keying mechanism.

WPA and WPA2 regularly change and rotate the encryption keys so that the same encryption key is never used twice.

The RADIUS server distributes a Pairwise Master Key (PMK) key to the AP that then sets up a key hierarchy and management system, using the PMK to dynamically generate unique data encryption keys to encrypt every data packet that is wirelessly communicated between the AP and the wireless clients. This all happens in the background automatically.

The Message Integrity Check (MIC) is designed to prevent an attacker from capturing data packets, altering them and resending them. The MIC provides a strong mathematical function in which the receiver and the transmitter each compute and then compare the MIC. If they do not match, it is assumed that the data has been tampered with and the packet is dropped.

By generating unique data encryption keys for every data packet and by creating an integrity checking mechanism (MIC), with TKIP and AES it is more difficult to decrypt data on a Wi-Fi network than WEP and difficult for an intruder to break into the network.

The encryption mechanisms used for WPA(2) and WPA(2)-PSK are the same. The only difference between the two is that WPA(2)-PSK uses a simple common password, instead of user-specific credentials. The common-password approach makes WPA(2)-PSK susceptible to brute-force password-guessing attacks but it's still an improvement over WEP as it employs a consistent, single, alphanumeric password to derive a PMK which is used to generate unique temporal encryption keys. This prevent all wireless devices sharing the same encryption keys. (a weakness of WEP)

User Authentication

WPA and WPA2 apply IEEE 802.1x and Extensible Authentication Protocol (EAP) to authenticate wireless clients using an external RADIUS database. WPA2 reduces the number of key exchange messages from six to four (CCMP 4-way handshake) and shortens the time required to connect to a network. Other WPA2 authentication features that are different from WPA include key caching and pre-authentication. These two features are optional and may not be supported in all wireless devices.

Key caching allows a wireless client to store the PMK it derived through a successful authentication with an AP. The wireless client uses the PMK when it tries to connect to the same AP and does not need to go with the authentication process again.

Pre-authentication enables fast roaming by allowing the wireless client (already connecting to an AP) to perform IEEE 802.1x authentication with another AP before connecting to it.

Wireless Client WPA Supplicants

A wireless client supplicant is the software that runs on an operating system instructing the wireless client how to use WPA. At the time of writing, the most widely available supplicant is the WPA patch for Windows XP, Funk Software's Odyssey client.

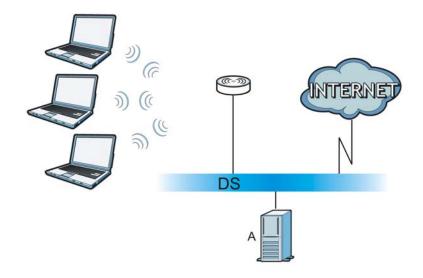

The Windows XP patch is a free download that adds WPA capability to Windows XP's built-in "Zero Configuration" wireless client. However, you must run Windows XP to use it.

WPA(2) with RADIUS Application Example

To set up WPA(2), you need the IP address of the RADIUS server, its port number (default is 1812), and the RADIUS shared secret. A WPA(2) application example with an external RADIUS server looks as follows. "A" is the RADIUS server. "DS" is the distribution system.

- 1 The AP passes the wireless client's authentication request to the RADIUS server.
- 2 The RADIUS server then checks the user's identification against its database and grants or denies network access accordingly.
- **3** A 256-bit Pairwise Master Key (PMK) is derived from the authentication process by the RADIUS server and the client.
- 4 The RADIUS server distributes the PMK to the AP. The AP then sets up a key hierarchy and management system, using the PMK to dynamically generate unique data encryption keys. The keys are used to encrypt every data packet that is wirelessly communicated between the AP and the wireless clients.

Figure 101 WPA(2) with RADIUS Application Example

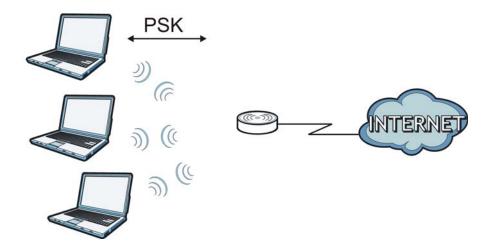

WPA(2)-PSK Application Example

A WPA(2)-PSK application looks as follows.

- 1 First enter identical passwords into the AP and all wireless clients. The Pre-Shared Key (PSK) must consist of between 8 and 63 ASCII characters or 64 hexadecimal characters (including spaces and symbols).
- 2 The AP checks each wireless client's password and allows it to join the network only if the password matches.
- The AP and wireless clients generate a common PMK (Pairwise Master Key). The key itself is not sent over the network, but is derived from the PSK and the SSID.

The AP and wireless clients use the TKIP or AES encryption process, the PMK and information exchanged in a handshake to create temporal encryption keys. They use these keys to encrypt data exchanged between them.

Figure 102 WPA(2)-PSK Authentication

Security Parameters Summary

Refer to this table to see what other security parameters you should configure for each authentication method or key management protocol type. MAC address filters are not dependent on how you configure these security features.

 Table 59
 Wireless Security Relational Matrix

AUTHENTICATION METHOD/ KEY MANAGEMENT PROTOCOL	ENCRYPTIO N METHOD	ENTER MANUAL KEY	IEEE 802.1X
Open	None	No	Disable
			Enable without Dynamic WEP Key
Open	WEP	No	Enable with Dynamic WEP Key
		Yes	Enable without Dynamic WEP Key
		Yes	Disable
Shared	WEP	No	Enable with Dynamic WEP Key
		Yes	Enable without Dynamic WEP Key
		Yes	Disable
WPA	TKIP/AES	No	Enable
WPA-PSK	TKIP/AES	Yes	Disable
WPA2	TKIP/AES	No	Enable
WPA2-PSK	TKIP/AES	Yes	Disable

Antenna Overview

An antenna couples RF signals onto air. A transmitter within a wireless device sends an RF signal to the antenna, which propagates the signal through the air. The antenna also operates in reverse by capturing RF signals from the air.

Positioning the antennas properly increases the range and coverage area of a wireless LAN.

Antenna Characteristics

Frequency

An antenna in the frequency of 2.4GHz or 5GHz is needed to communicate efficiently in a wireless LAN

Radiation Pattern

A radiation pattern is a diagram that allows you to visualize the shape of the antenna's coverage area.

Antenna Gain

Antenna gain, measured in dB (decibel), is the increase in coverage within the RF beam width. Higher antenna gain improves the range of the signal for better communications.

For an indoor site, each 1 dB increase in antenna gain results in a range increase of approximately 2.5%. For an unobstructed outdoor site, each 1dB increase in gain results in a range increase of approximately 5%. Actual results may vary depending on the network environment.

Antenna gain is sometimes specified in dBi, which is how much the antenna increases the signal power compared to using an isotropic antenna. An isotropic antenna is a theoretical perfect antenna that sends out radio signals equally well in all directions. dBi represents the true gain that the antenna provides.

Types of Antennas for WLAN

There are two types of antennas used for wireless LAN applications.

- Omni-directional antennas send the RF signal out in all directions on a horizontal plane. The
 coverage area is torus-shaped (like a donut) which makes these antennas ideal for a room
 environment. With a wide coverage area, it is possible to make circular overlapping coverage
 areas with multiple access points.
- Directional antennas concentrate the RF signal in a beam, like a flashlight does with the light from its bulb. The angle of the beam determines the width of the coverage pattern. Angles typically range from 20 degrees (very directional) to 120 degrees (less directional). Directional antennas are ideal for hallways and outdoor point-to-point applications.

Positioning Antennas

In general, antennas should be mounted as high as practically possible and free of obstructions. In point-to-point application, position both antennas at the same height and in a direct line of sight to each other to attain the best performance.

For omni-directional antennas mounted on a table, desk, and so on, point the antenna up. For omni-directional antennas mounted on a wall or ceiling, point the antenna down. For a single AP application, place omni-directional antennas as close to the center of the coverage area as possible.

For directional antennas, point the antenna in the direction of the desired coverage area.

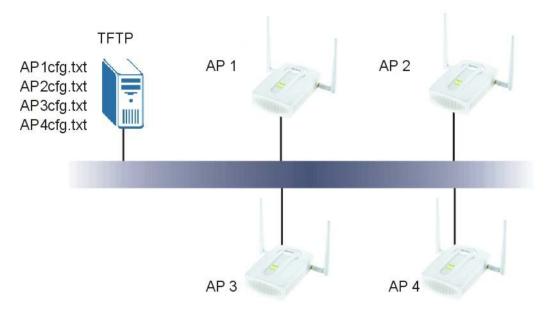

Text File Based Auto Configuration

This chapter describes how administrators can use text configuration files to configure the wireless LAN settings for multiple APs.

Text File Based Auto Configuration Overview

You can use plain text configuration files to configure the wireless LAN settings on multiple APs. The AP can automatically get a configuration file from a TFTP server at startup or after renewing DHCP client information.

Figure 103 Text File Based Auto Configuration

Use one of the following methods to give the AP the IP address of the TFTP server where you store the configuration files and the name of the configuration file that it should download.

You can have a different configuration file for each AP. You can also have multiple APs use the same configuration file.

Note: If adjacent APs use the same configuration file, you should leave out the channel setting since they could interfere with each other's wireless traffic.

Configuration Via SNMP

You can configure and trigger the auto configuration remotely via SNMP.

Use the following procedure to have the AP download the configuration file.

Table 60 Configuration via SNMP

STEPS	MIB VARIABLE	VALUE
Step 1	pwTftpServer	Set the IP address of the TFTP server.
Step 2	pwTftpFileName	Set the file name, for example, g3000hcfg.txt.
Step 3	pwTftpFileType	Set to 3 (text configuration file).
Step 4	pwTftpOpCommand	Set to 2 (download).

Verifying Your Configuration File Upload Via SNMP

You can use SNMP management software to display the configuration file version currently on the device by using the following MIB.

Table 61 Displaying the File Version

ITEM	OBJECT ID	DESCRIPTION
pwCfgVersion	1.3.6.1.4.1.890.1.9.1.2	This displays the current configuration file version.

Troubleshooting Via SNMP

If you have any difficulties with the configuration file upload, you can try using the following MIB 10 to 20 seconds after using SNMP to have the AP download the configuration file.

Table 62 Displaying the File Version

ITEM	OBJECT ID	DESCRIPTION
pwTftpOpStatus	1.3.6.1.4.1.890.1.9.1.6	This displays the current operating status of the TFTP client.

Open Software Announcements

End-User License Agreement for "NWA1100-N

WARNING: ZyXEL Communications Corp. IS WILLING TO LICENSE THE SOFTWARE TO YOU ONLY UPON THE CONDITION THAT YOU ACCEPT ALL OF THE TERMS CONTAINED IN THIS LICENSE AGREEMENT. PLEASE READ THE TERMS CAREFULLY BEFORE COMPLETING THE INSTALLATION PROCESS AS INSTALLING THE SOFTWARE WILL INDICATE YOUR ASSENT TO THEM. IF YOU DO NOT AGREE TO THESE TERMS, THEN ZYXEL IS UNWILLING TO LICENSE THE SOFTWARE TO YOU, IN WHICH EVENT YOU SHOULD RETURN THE UNINSTALLED SOFTWARE AND PACKAGING TO THE PLACE FROM WHICH IT WAS ACQUIRED OR ZYXEL, AND YOUR MONEY WILL BE REFUNDED. HOWEVER, CERTAIN ZYXEL'S PRODUCTS MAY CONTAIN-IN PART-SOME THIRD PARTY'S FREE AND OPEN SOFTWARE PROGRAMS WHICH ALLOW YOU TO FREELY COPY, RUN, DISTRIBUTE, MODIFY AND IMPROVE THE SOFTWARE UNDER THE APPLICABLE TERMS OF SUCH THRID PARTY'S LICENSES ("OPEN-SOURCED COMPONENTS"). THE OPEN-SOURCED COMPONENTS ARE LISTED IN THE NOTICE OR APPENDIX BELOW. ZYXEL MAY HAVE DISTRIBUTED TO YOU HARDWARE AND/OR SOFTWARE, OR MADE AVAILABLE FOR ELECTRONIC DOWNLOADS THESE FREE SOFTWARE PROGRAMS OF THRID PARTIES AND YOU ARE LICENSED TO FREELY COPY, MODIFY AND REDISTIBUTE THAT SOFTWARE UNDER THE APPLICABLE LICENSE TERMS OF SUCH THIRD PARTY. NONE OF THE STATEMENTS OR DOCUMENTATION FROM ZYXEL INCLUDING ANY RESTRICTIONS OR CONDITIONS STATED IN THIS END USER LICENSE AGREEMENT SHALL RESTRICT ANY RIGHTS AND LICENSES YOU MAY HAVE WITH RESPECT TO THE OPEN-SOURCED COMPONENTS UNDER THE APPLICABLE LICENSE TERMS OF SUCH THIRD PARTY.

1.Grant of License for Personal Use

ZyXEL Communications Corp. ("ZyXEL") grants you a non-exclusive, non-sublicense, non-transferable license to use the program with which this license is distributed (the "Software"), including any documentation files accompanying the Software ("Documentation"), for internal business use only, for up to the number of users specified in sales order and invoice. You have the right to make one backup copy of the Software and Documentation solely for archival, back-up or disaster recovery purposes. You shall not exceed the scope of the license granted hereunder. Any rights not expressly granted by ZyXEL to you are reserved by ZyXEL, and all implied licenses are disclaimed.

2.Ownership

You have no ownership rights in the Software. Rather, you have a license to use the Software as long as this License Agreement remains in full force and effect. Ownership of the Software, Documentation and all intellectual property rights therein shall remain at all times with ZyXEL. Any other use of the Software by any other entity is strictly forbidden and is a violation of this License Agreement.

3.Copyright

The Software and Documentation contain material that is protected by international copyright law, trade secret law, international treaty provisions, and the applicable national laws of each respective country. All rights not granted to you herein are expressly reserved by ZyXEL. You may not

remove any proprietary notice of ZyXEL or any of its licensors from any copy of the Software or Documentation.

4. Restrictions

You may not publish, display, disclose, sell, rent, lease, modify, store, loan, distribute, or create derivative works of the Software, or any part thereof. You may not assign, sublicense, convey or otherwise transfer, pledge as security or otherwise encumber the rights and licenses granted hereunder with respect to the Software. ZyXEL is not obligated to provide any maintenance, technical or other support for the resultant modified Software. You may not copy, reverse engineer, decompile, reverse compile, translate, adapt, or disassemble the Software, or any part thereof, nor shall you attempt to create the source code from the object code for the Software. Except as and only to the extent expressly permitted in this License, you may not market, co-brand, and private label or otherwise permit third parties to link to the Software, or any part thereof. You may not use the Software, or any part thereof, in the operation of a service bureau or for the benefit of any other person or entity. You may not cause, assist or permit any third party to do any of the foregoing. Portions of the Software utilize or include third party software and other copyright material. Acknowledgements, licensing terms and disclaimers for such material are contained in the License Notice as below for the third party software, and your use of such material is exclusively governed by their respective terms. ZyXEL has provided, as part of the Software package, access to certain third party software as a convenience. To the extent that the Software contains third party software, ZyXEL has no express or implied obligation to provide any technical or other support for such software other than compliance with the applicable license terms of such third party, and makes no warranty (express, implied or statutory) whatsoever with respect thereto. Please contact the appropriate software vendor or manufacturer directly for technical support and customer service related to its software and products.

5. Confidentiality

You acknowledge that the Software contains proprietary trade secrets of ZyXEL and you hereby agree to maintain the confidentiality of the Software using at least as great a degree of care as you use to maintain the confidentiality of your own most confidential information. You agree to reasonably communicate the terms and conditions of this License Agreement to those persons employed by you who come into contact with the Software, and to use reasonable best efforts to ensure their compliance with such terms and conditions, including, without limitation, not knowingly permitting such persons to use any portion of the Software for the purpose of deriving the source code of the Software.

6.No Warranty

THE SOFTWARE IS PROVIDED "AS IS." TO THE MAXIMUM EXTENT PERMITTED BY LAW, ZYXEL DISCLAIMS ALL WARRANTIES OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. ZYXEL DOES NOT WARRANT THAT THE FUNCTIONS CONTAINED IN THE SOFTWARE WILL MEET ANY REQUIREMENTS OR NEEDS YOU MAY HAVE, OR THAT THE SOFTWARE WILL OPERATE ERROR FREE, OR IN AN UNINTERUPTED FASHION, OR THAT ANY DEFECTS OR ERRORS IN THE SOFTWARE WILL BE CORRECTED, OR THAT THE SOFTWARE IS COMPATIBLE WITH ANY PARTICULAR PLATFORM. SOME JURISDICTIONS DO NOT ALLOW THE WAIVER OR EXCLUSION OF IMPLIED WARRANTIES SO THEY MAY NOT APPLY TO YOU. IF THIS EXCLUSION IS HELD TO BE UNENFORCEABLE BY A COURT OF COMPETENT JURISDICTION, THEN ALL EXPRESS AND IMPLIED WARRANTIES SHALL BE LIMITED IN DURATION TO A PERIOD OF THIRTY (30) DAYS FROM THE DATE OF PURCHASE OF THE SOFTWARE, AND NO WARRANTIES SHALL APPLY AFTER THAT PERIOD.

7.Limitation of Liability

IN NO EVENT WILL ZYXEL BE LIABLE TO YOU OR ANY THIRD PARTY FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING, WITHOUT LIMITATION, INDIRECT, SPECIAL, PUNITIVE, OR EXEMPLARY DAMAGES FOR LOSS OF BUSINESS, LOSS OF PROFITS, BUSINESS INTERRUPTION, OR LOSS OF BUSINESS INFORMATION) ARISING OUT OF THE USE OF OR INABILITY TO USE THE SOFTWARE OR PROGRAM, OR FOR ANY CLAIM BY ANY OTHER PARTY, EVEN IF ZYXEL HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. ZYXEL'S TOTAL AGGREGATE LIABILITY WITH RESPECT TO ITS OBLIGATIONS UNDER THIS AGREEMENT OR OTHERWISE WITH RESPECT TO THE SOFTWARE AND DOCUMENTATION OR OTHERWISE SHALL BE EQUAL TO THE PURCHASE PRICE, BUT SHALL IN NO EVENT EXCEED THE PRODUCT'S PRICE. BECAUSE SOME STATES/COUNTRIES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

8.Export Restrictions

THIS LICENSE AGREEMENT IS EXPRESSLY MADE SUBJECT TO ANY APPLICABLE LAWS, REGULATIONS, ORDERS, OR OTHER RESTRICTIONS ON THE EXPORT OF THE SOFTWARE OR INFORMATION ABOUT SUCH SOFTWARE WHICH MAY BE IMPOSED FROM TIME TO TIME. YOU SHALL NOT EXPORT THE SOFTWARE, DOCUMENTATION OR INFORMATION ABOUT THE SOFTWARE AND DOCUMENTATION WITHOUT COMPLYING WITH SUCH LAWS, REGULATIONS, ORDERS, OR OTHER RESTRICTIONS. YOU AGREE TO INDEMNIFY ZYXEL AGAINST ALL CLAIMS, LOSSES, DAMAGES, LIABILITIES, COSTS AND EXPENSES, INCLUDING REASONABLE ATTORNEYS' FEES, TO THE EXTENT SUCH CLAIMS ARISE OUT OF ANY BREACH OF THIS SECTION 8.

9. Audit Rights

ZYXEL SHALL HAVE THE RIGHT, AT ITS OWN EXPENSE, UPON REASONABLE PRIOR NOTICE, TO PERIODICALLY INSPECT AND AUDIT YOUR RECORDS TO ENSURE YOUR COMPLIANCE WITH THE TERMS AND CONDITIONS OF THIS LICENSE AGREEMENT.

10.Termination

This License Agreement is effective until it is terminated. You may terminate this License Agreement at any time by destroying or returning to ZyXEL all copies of the Software and Documentation in your possession or under your control. ZyXEL may terminate this License Agreement for any reason, including, but not limited to, if ZyXEL finds that you have violated any of the terms of this License Agreement. Upon notification of termination, you agree to destroy or return to ZyXEL all copies of the Software and Documentation and to certify in writing that all known copies, including backup copies, have been destroyed. All provisions relating to confidentiality, proprietary rights, and non-disclosure shall survive the termination of this Software License Agreement.

11.General

This License Agreement shall be construed, interpreted and governed by the laws of Republic of China without regard to conflicts of laws provisions thereof. The exclusive forum for any disputes arising out of or relating to this License Agreement shall be an appropriate court or Commercial Arbitration Association sitting in ROC, Taiwan if the parties agree to a binding arbitration. This License Agreement shall constitute the entire Agreement between the parties hereto. This License Agreement, the rights granted hereunder, the Software and Documentation shall not be assigned by you without the prior written consent of ZyXEL. Any waiver or modification of this License Agreement shall only be effective if it is in writing and signed by both parties hereto. If any part of this License Agreement is found invalid or unenforceable by a court of competent jurisdiction, the

remainder of this License Agreement shall be interpreted so as to reasonably effect the intention of the parties.

NOTE: Some components of this product incorporate free software programs covered under the open source code licenses which allows you to freely copy, modify and redistribute the software. For at least three (3) years from the date of distribution of the applicable product or software, we will give to anyone who contacts us at the ZyXEL Technical Support (support@zyxel.com.tw), for a charge of no more than our cost of physically performing source code distribution, a complete machine-readable copy of the complete corresponding source code for the version of the Programs that we distributed to you if we are in possession of such.

Notice

Information herein is subject to change without notice. Companies, names, and data used in examples herein are fictitious unless otherwise noted. No part may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, except the express written permission of ZyXEL Communications Corporation.

This Product includes Busybox, hostapd, wpa_supplicant, ntpclient, vsftpd, Linux Kernel and u-boot software under GPL 2.0 license.

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

59 Temple Place - Suite 330, Boston, MA 02111-1307, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it,

that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it. For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software. Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

- 0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you". Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.
- 1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program. You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.
- 2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it. Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program. In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

- 3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:
- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or, c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.) The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the

scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable. If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

- 4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
- 5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
- 6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
- 7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program. If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances. It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice. This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
- 8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
- 9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

- 11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
- 12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

All other trademarks or trade names mentioned herein, if any, are the property of their respective owners.

* SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

This Product includes u-boot software under below license

NOTE! This copyright does *not* cover the so-called "standalone" applications that use U-Boot services by means of the jump table provided by U-Boot exactly for this purpose - this is merely considered normal use of U-Boot, and does *not* fall under the heading of "derived work".

The header files "include/image.h" and "include/asm-*/u-boot.h" define interfaces to U-Boot. Including these (unmodified) header files in another file is considered normal use of U-Boot, and does *not* fall under the heading of "derived work".

Also note that the GPL below is copyrighted by the Free Software Foundation, but the instance of code that it refers to (the U-Boot source code) is copyrighted by me and others who actually wrote it.

-- Wolfgang Denk

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights.

These restrictions translate to certain responsibilities for you if you

distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

214

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

O. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

- 2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
 - a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
 - b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
 - c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

216

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

- 3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:
 - a) Accompany it with the complete corresponding machine-readable
 source code, which must be distributed under the terms of Sections
 1 and 2 above on a medium customarily used for software interchange; or,

- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as

distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

- 4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
- 5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
- 6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

220

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

- 8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
- 9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes

make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

- 11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
- 12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Customer Support

In the event of problems that cannot be solved by using this manual, you should contact your vendor. If you cannot contact your vendor, then contact a ZyXEL office for the region in which you bought the device. Regional websites are listed below (see also http://www.zyxel.com/about_zyxel/zyxel_worldwide.shtml). Please have the following information ready when you contact an office.

Required Information

- Product model and serial number.
- Warranty Information.
- Date that you received your device.
- Brief description of the problem and the steps you took to solve it.

Federal Communications Commission (FCC) Interference Statement

The device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- · This device must accept any interference received, including interference that may cause undesired operations.

This device has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this device does cause harmful interference to radio/television reception, which can be determined by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- 2 Increase the separation between the equipment and the receiver.
- 3 Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- 4 Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

FCC Radiation Exposure Statement

- This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
- IEEE 802.11b, 802.11g or 802.11n (20MHz) operation of this product in the U.S.A. is firmware-limited to channels 1 through 11. IEEE 802.11n (40MHz) operation of this product in the U.S.A. is firmware-limited to channels 3 through 9.
- To comply with FCC RF exposure compliance requirements, a separation distance of at least 20 cm must be maintained between the antenna of this device and all persons.

Industry Canada Statement

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions:

- 1) this device may not cause interference and
- 2) this device must accept any interference, including interference that may cause undesired operation of the device

This device has been designed to operate with an antenna having a maximum gain of 2dBi.

Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the EIRP is not more than required for successful communication.

IMPORTANT NOTE

Device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-channel mobile satellite systems; users should also be cautioned to take note that high-power radars are allocated as primary users (meaning they have priority) of the bands 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.

IC Radiation Exposure Statement

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance.

注意!

依據 低功率電波輻射性電機管理辦法

第十二條 經型式認證合格之低功率射頻電機,非經許可,公司、商號或使用 者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通信;經發現有干擾現象時,應立即停用,並改善至無干擾時方得繼續使用。 前項合法通信,指依電信規定作業之無線電信。低功率射頻電機須忍 受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

Notices

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Viewing Certifications

Go to http://www.zyxel.com to view this product's documentation and certifications.

ZyXEL Limited Warranty

ZyXEL warrants to the original end user (purchaser) that this product is free from any defects in material or workmanship for a specific period (the Warranty Period) from the date of purchase. The Warranty Period varies by region. Check with your vendor and/or the authorized ZyXEL local distributor for details about the Warranty Period of this product. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, ZyXEL will, at its discretion, repair or replace the defective products or components without charge for either parts or labor, and to whatever extent it shall deem necessary to restore the product or components to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal or higher value, and will be solely at the discretion of ZyXEL. This warranty shall not apply if the product has been modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions.

Note

Repair or replacement, as provided under this warranty, is the exclusive remedy of the purchaser. This warranty is in lieu of all other warranties, express or implied, including any implied warranty of merchantability or fitness for a particular use or purpose. ZyXEL shall in no event be held liable for indirect or consequential damages of any kind to the purchaser.

To obtain the services of this warranty, contact your vendor. You may also refer to the warranty policy for the region in which you bought the device at http://www.zyxel.com/web/support_warranty_info.php.

Registration

Register your product online to receive e-mail notices of firmware upgrades and information at www.zyxel.com for global products, or at www.us.zyxel.com for North American products.

Regulatory Information

European Union

The following information applies if you use the product within the European Union.

Declaration of Conformity with Regard to EU Directive 1999/5/EC (R&TTE Directive)

Compliance Information for 2.4GHz and 5GHz Wireless Products Relevant to the EU and Other Countries Following the EU Directive 1999/5/EC (R&TTE Directive)

[Czech]	ZyXEL tímto prohlašuje, že tento zařízení je ve shodě se základními požadavky a dalšími příslušnými ustanoveními směrnice 1999/5/EC.
[Danish]	Undertegnede ZyXEL erklærer herved, at følgende udstyr udstyr overholder de væsentlige krav og øvrige relevante krav i direktiv 1999/5/EF.
[German]	Hiermit erklärt ZyXEL, dass sich das Gerät Ausstattung in Übereinstimmung mit den grundlegenden Anforderungen und den übrigen einschlägigen Bestimmungen der Richtlinie 1999/5/EU befindet.
[Estonian]	Käesolevaga kinnitab ZyXEL seadme seadmed vastavust direktiivi 1999/5/EÜ põhinõuetele ja nimetatud direktiivist tulenevatele teistele asjakohastele sätetele.
English	Hereby, ZyXEL declares that this equipment is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.
[Spanish]	Por medio de la presente ZyXEL declara que el equipo cumple con los requisitos esenciales y cualesquiera otras disposiciones aplicables o exigibles de la Directiva 1999/5/CE.
[Greek]	ΜΕ ΤΗΝ ΠΑΡΟΥΣΑ ΖΥΧΕΙ ΔΗΛΩΝΕΙ ΟΤΙ εξοπλισμός ΣΥΜΜΟΡΦΩΝΕΤΑΙ ΠΡΟΣ ΤΙΣ ΟΥΣΙΩΔΕΙΣ ΑΠΑΙΤΗΣΕΙΣ ΚΑΙ ΤΙΣ ΛΟΙΠΕΣ ΣΧΕΤΙΚΕΣ ΔΙΑΤΑΞΕΙΣ ΤΗΣ ΟΔΗΓΙΑΣ 1999/5/ΕC.

[French]	Par la présente ZyXEL déclare que l'appareil équipements est conforme aux exigences essentielles et aux autres dispositions pertinentes de la directive 1999/5/EC.
[Italian]	Con la presente ZyXEL dichiara che questo attrezzatura è conforme ai requisiti essenziali ed alle altre disposizioni pertinenti stabilite dalla direttiva 1999/5/CE.
[Latvian]	Ar šo ZyXEL deklarē, ka iekārtas atbilst Direktīvas 1999/5/EK būtiskajām prasībām un citiem ar to saistītajiem noteikumiem.
[Lithuanian]	Šiuo ZyXEL deklaruoja, kad šis įranga atitinka esminius reikalavimus ir kitas 1999/5/EB Direktyvos nuostatas.
[Dutch]	Hierbij verklaart ZyXEL dat het toestel uitrusting in overeenstemming is met de essentiële eisen en de andere relevante bepalingen van richtlijn 1999/5/EC.
[Maltese]	Hawnhekk, ZyXEL, jiddikjara li dan taghmir jikkonforma mal-htigijiet essenzjali u ma provvedimenti ohrajn relevanti li hemm fid-Dirrettiva 1999/5/EC.
[Hungarian]	Alulírott, ZyXEL nyilatkozom, hogy a berendezés megfelel a vonatkozó alapvető követelményeknek és az 1999/5/EK irányelv egyéb előírásainak.
[Polish]	Niniejszym ZyXEL oświadcza, że sprzęt jest zgodny z zasadniczymi wymogami oraz pozostałymi stosownymi postanowieniami Dyrektywy 1999/5/EC.
[Portuguese]	ZyXEL declara que este equipamento está conforme com os requisitos essenciais e outras disposições da Directiva 1999/5/EC.
[Slovenian]	ZyXEL izjavlja, da je ta oprema v skladu z bistvenimi zahtevami in ostalimi relevantnimi določili direktive 1999/5/EC.
[Slovak]	ZyXEL týmto vyhlasuje, že zariadenia spĺňa základné požiadavky a všetky príslušné ustanovenia Smernice 1999/5/EC.
[Finnish]	ZyXEL vakuuttaa täten että laitteet tyyppinen laite on direktiivin 1999/5/EY oleellisten vaatimusten ja sitä koskevien direktiivin muiden ehtojen mukainen.
[Swedish]	Härmed intygar ZyXEL att denna utrustning står I överensstämmelse med de väsentliga egenskapskrav och övriga relevanta bestämmelser som framgår av direktiv 1999/5/EC.
[Bulgarian]	С настоящото ZyXEL декларира, че това оборудване е в съответствие със съществените изисквания и другите приложими разпоредбите на Директива 1999/5/EC.
[Icelandic]	Hér með lýsir, ZyXEL því yfir að þessi búnaður er í samræmi við grunnkröfur og önnur viðeigandi ákvæði tilskipunar 1999/5/EC.
[Norwegian]	Erklærer herved ZyXEL at dette utstyret er I samsvar med de grunnleggende kravene og andre relevante bestemmelser I direktiv 1999/5/EF.
[Romanian]	Prin prezenta, ZyXEL declară că acest echipament este în conformitate cu cerințele esențiale și alte prevederi relevante ale Directivei 1999/5/EC.

National Restrictions

This product may be used in all EU countries (and other countries following the EU directive 1999/5/EC) without any limitation except for the countries mentioned below:

Ce produit peut être utilisé dans tous les pays de l'UE (et dans tous les pays ayant transposés la directive 1999/5/CE) sans aucune limitation, excepté pour les pays mentionnés ci-dessous:

Questo prodotto è utilizzabile in tutte i paesi EU (ed in tutti gli altri paesi che seguono le direttive EU 1999/5/EC) senza nessuna limitazione, eccetto per i paesii menzionati di seguito:

Das Produkt kann in allen EU Staaten ohne Einschränkungen eingesetzt werden (sowie in anderen Staaten die der EU Direktive 1995/5/CE folgen) mit Außnahme der folgenden aufgeführten Staaten:

In the majority of the EU and other European countries, the 2, 4- and 5-GHz bands have been made available for the use of wireless local area networks (LANs). Later in this document you will find an overview of countries inwhich additional restrictions or requirements or both are applicable.

The requirements for any country may evolve. ZyXEL recommends that you check with the local authorities for the latest status of their national regulations for both the 2,4- and 5-GHz wireless LANs.

The following countries have restrictions and/or requirements in addition to those given in the table labeled "Overview of Regulatory Requirements for Wireless LANs":.

Overview of Regulatory Requirements for Wireless LANs			
Frequency Band (MHz) Max Power Level (EIRP) ¹ (mW) Indoor ONLY Indoor and Outdoor			Indoor and Outdoor
2400-2483.5	100		V
5150-5350	200	V	
5470-5725	1000		V

Belgium

The Belgian Institute for Postal Services and Telecommunications (BIPT) must be notified of any outdoor wireless link having a range exceeding 300 meters. Please check http://www.bipt.be for more details.

Draadloze verbindingen voor buitengebruik en met een reikwijdte van meer dan 300 meter dienen aangemeld te worden bij het Belgisch Instituut voor postdiensten en telecommunicatie (BIPT). Zie http://www.bipt.be voor meer gegevens.

Les liaisons sans fil pour une utilisation en extérieur d'une distance supérieure à 300 mètres doivent être notifiées à l'Institut Belge des services Postaux et des Télécommunications (IBPT). Visitez http://www.ibpt.be pour de plus amples détails.

Denmark

In Denmark, the band 5150 - 5350 MHz is also allowed for outdoor usage.

I Danmark må frekvensbåndet 5150 - 5350 også anvendes udendørs.

France

For 2.4 GHz, the output power is restricted to 10 mW EIRP when the product is used outdoors in the band 2454 - 2483.5 MHz. There are no restrictions when used indoors or in other parts of the 2.4 GHz band. Check http://www.arcep.fr/ for more details.

Pour la bande 2.4 GHz, la puissance est limitée à 10 mW en p.i.r.e. pour les équipements utilisés en extérieur dans la bande 2454 - 2483.5 MHz. Il n'y a pas de restrictions pour des utilisations en intérieur ou dans d'autres parties de la bande 2.4 GHz. Consultez http://www.arcep.fr/ pour de plus amples détails.

R&TTE 1999/5/EC			
WLAN 2.4 - 2.4835 GHz			
IEEE 802.11 b/g/n			
Location	Frequency Range (GHz)	Power (EIRP)	
Indoor (No restrictions)	2.4 - 2.4835	100mW (20dBm)	
Outdoor	2.4 - 2.454	100mW (20dBm)	
	2.454 - 2.4835	10mW (10dBm)	

Italy

This product meets the National Radio Interface and the requirements specified in the National Frequency Allocation Table for Italy. Unless this wireless LAN product is operating within the boundaries of the owner's property, its use requires a "general authorization." Please check http://www.sviluppoeconomico.gov.it/ for more details.

Questo prodotto è conforme alla specifiche di Interfaccia Radio Nazionali e rispetta il Piano Nazionale di ripartizione delle frequenze in Italia. Se non viene installato all'interno del proprio fondo, l'utilizzo di prodotti Wireless LAN richiede una "Autorizzazione Generale". Consultare http://www.sviluppoeconomico.gov.it/ per maggiori dettagli.

Latvia

The outdoor usage of the 2.4 GHz band requires an authorization from the Electronic Communications Office. Please check http://www.esd.lv for more details.

- 2.4 GHz frekvenèu joslas izmantoðanai ārpus telpām nepiecieðama atĭauja no Elektronisko sakaru direkcijas. Vairāk informācijas: http://www.esd.lv. Notes:
- 1. Although Norway, Switzerland and Liechtenstein are not EU member states, the EU Directive 1999/5/EC has also been implemented in those countries.
- 2. The regulatory limits for maximum output power are specified in EIRP. The EIRP level (in dBm) of a device can be calculated by adding the gain of the antenna used(specified in dBi) to the output power available at the connector (specified in dBm).

Safety Warnings

- Do NOT use this product near water, for example, in a wet basement or near a swimming pool.
- Do NOT expose your device to dampness, dust or corrosive liquids. Do NOT store things on the device.
- Do NOT install, use, or service this device during a thunderstorm. There is a remote risk of electric shock from lightning.
- Connect ONLY suitable accessories to the device.
- Do NOT open the device or unit. Opening or removing covers can expose you to dangerous high voltage points or other risks. ONLY qualified service personnel should service or disassemble this device. Please contact your vendor for further information.
- Make sure to connect the cables to the correct ports.
- Place connecting cables carefully so that no one will step on them or stumble over them.
- Always disconnect all cables from this device before servicing or disassembling
- Use ONLY an appropriate power adaptor or cord for your device. Connect it to the right supply voltage (for example, 110V AC in North America or 230V AC in Europe).
- Do NOT remove the plug and connect it to a power outlet by itself; always attach the plug to the power adaptor first before connecting it to a power outlet.
- Do NOT allow anything to rest on the power adaptor or cord and do NOT place the product where anyone can walk on the power adaptor or cord.
- Do NOT use the device if the power adaptor or cord is damaged as it might cause electrocution.
- If the power adaptor or cord is damaged, remove it from the device and the power source.
- Do NOT attempt to repair the power adaptor or cord. Contact your local vendor to order a new one.
- Do not use the device outside, and make sure all the connections are indoors. There is a remote risk of electric shock from lightning.
- Do NOT obstruct the device ventilation slots, as insufficient airflow may harm your device.

 Antenna Warning! This device meets ETSI and FCC certification requirements when using the included antenna(s). Only use the included antenna(s).
- If you wall mount your device, make sure that no electrical lines, gas or water pipes will be damaged.
- The PoE (Power over Ethernet) devices that supply or receive power and their connected Ethernet cables must all be completely indoors.
- This product is for indoor use only (utilisation intérieure exclusivement).

Your product is marked with this symbol, which is known as the WEEE mark. WEEE stands for Waste Electronics and Electrical Equipment. It means that used electrical and electronic products should not be mixed with general waste. Used electrical and electronic equipment should be treated separately.

"INFORMAZIONI AGLI UTENTI"

Ai sensi dell'art. 13 del Decreto Legislativo 25 luglio 2005, n.151"Attuazione delle Direttive 2002/95/CE, 2002/96/CE e 2003/108/CE, relative alla riduzione dell'uso di sostanze pericolose nelle apparecchiature elettriche ed elettroniche, nonche allo smaltimento dei rifiuti"

Il simbolo del cassonetto barrato riportato sull'apparecchiatura o sulla sua confezione indica che il prodotto alla fine della propria vita utile deve essere raccolto separatamente dagli altri rifiuti.

La raccolta differenziata della presente apparecchiatura giunta a fine vita e organizzata e gestita dal produttore. L'utente che vorra disfarsi della presente apparecchiatura dovra quindi contattare il produttore e seguire il sistema che questo ha adottato per consentire la raccolta separata dell'apparecchiatura giunta a fine vita.

L'adeguata raccolta differenziata per l'avvio successivo dell'apparecchiatura dismessa al riciclaggio, al trattamento e allo smaltimento ambientalmente compatibile contribuisce ad evitare possibili effetti negativi sull'ambiente e sulla salute e favorisce il reimpiego e/o riciclo dei materiali di cui e composta l'apparecchiatura.

Lo smaltimento abusivo del prodotto da parte del detentore comporta l'applicazione delle sanzioni amministrative previste dalla normativa vigente."
