Wireless N VDSL Modem Router

with Auto Fallback to ADSL 2+/2

Model# V1000H

One of the most Powerful Routers Built

The V1000H Wireless N VDSL Modem Router is one of the most robust routers available today. With its new, powerful wireless N radio, gigabit Ethernet switch and WAN port, dual-core 32-bit processor, support for HPNA and capacious amounts of memory (32MB Flash, 64 MB SDRAM), this Router propels through the Internet with incredible speed. It can simultaneously support a wide range of demanding multimedia applications, including HDTV, standard TV, Voice over WiFi, media sharing, and online gaming. As a point of comparison, most residential routers can't come close to this router's speed and performance.

Gigabit Ethernet Built In

To further add to the Router's Power, Gigabit Ethernet is available on both the WAN and LAN (home networking) sides. Supporting speeds up to 1000 Mbps, this Router excels in a Fiber network where you can surf at incredibly high speeds. With Gigabit Ethernet, you can watch online videos or podcasts, download large files or move massive amounts of data within your home network or out to the Internet, with no problems, no hiccups, and absolutely no sweat.

802.11n Wireless Built In

The Router supports 802.11n out of the box, with backward compatibility to older wireless protocols, combining flexibility with power. Also included is MIMO (Multiple Input Multiple Output) smart antenna technology, which further improves your wireless experience by offering better whole home coverage and fewer dead spots.

Backward Compatible to ADSL 2+/2

While it runs on the VDSL 2 access technology, it also features an "Auto Fall Back to ADSL2+/2" option, which allows it to operate on the ADSL 2+ and ADSL 2 access technology. Simply stated, there's no need to buy one device today, and another tomorrow, which means less SKUs for you, and less inventory.

Supports HPNA Coax for Wired Alternative

With HPNA, you can enjoy the high speeds of a wired connection (over 100 Mbps) with little degradation, and connect devices together using your existing Coax TV infrastructure. Plus in some networks, a carrier may bring very high speed Internet access directly to the inside of your home, using Coax.

Downloadable Applications using Java

The Wireless N VDSL Modem Router has the option to include a Java Virtual Machine and Java Runtime Software. Capable of hosting a number of Java applications, the Router, in combination with this feature, allows you to make more options available to your customers (home automation or enhanced security, to list only a couple of options) in a modular fashion; that is, rather than having to implement sweeping changes via a full-scale firmware update, you can use Java to selectively update customer units with revenue-generating applications.

Robust Firewall and Wireless Security

The wireless-enabled gateways support WEP, WPA, and WPA2 encryption. Unique IDs are assigned to each wireless gateway to prevent hacking. The V1000H includes a fully customizable firewall with Stateful Packet Inspection, denial of service protection, content filtering, intrusion detection, WPA/WPA2 and WEP wireless encryption to keep unwanted visitors from accessing your network.

TR-069 Support and Remote Management

The V1000H equips technical support staff with unparalleled remote management and troubleshooting powers to provide superior customer experience and support.

Wireless N VDSL Modem Router with Auto Fallback to ADSL2

Ethernet LAN Ports

HPNA LAN and/or WAN Port

DSL WAN Port

Ethernet WAN Port

USB Host Port

Reset Button

Power Port

Other Features

Interfaces

- Four 10/100/1000 BaseT Ethernet LAN
- One 10/100/1000 BaseT Ethernet WAN
- One RJ-11 VDSL/ADSL Line
- One HPNA 3.1 LAN or WAN

Wireless

- 802.11 b/g/n
- External RADIUS Server Support
- Multiple SSID
- WPS
- WMM, WMM PowerSave (available upon request)
- Wireless Security
    - Wi-Fi Protected Access (WPA, WPA2)
    - WEP, TKIP encryption
    - 802.1x authentication
    - Pre-Shared Key (PSK)
    - MAC Address Filtering

Remote Management

- User-enable Remote Management
- TR069 Carrier Remote Management
- TR064 Local Management

Advanced Security

- Firewall
- Stateful Packet Inspection
- NAT
- Website Blocking
- Web Service Blocking
- URL Keyword-Based Filtering
- Parental Control
- Customizable Filtering Policies per Computer
- Internet Traffic Logging
- Denial of Service (DOS) Protection
- Demilitarized Zone (DMZ)
- Intrusion Detection
- IP Protocol Filtering

QoS Support

- Diffserv
- 802.1p/q Prioritization
- Configurable Upstream/Downstream Traffic Shaping
- Random Early Detection
- Pass-through of WAN-side DSCPs, PHBs & Queing to LAN-side devices
- Prioritization via DHCP options

Advanced Features

- DHCP Server Option
- DHCP Server/PPPoE Server Auto Detection
- DNS Server
- Full Bridge Device Control
- LAN IP & WAN IP Address Selection
- MAC Address Cloning
- Port Forwarding, Port Triggering
- PPPoE Support
- IGMP v1, v2, v3 (available soon)
- MAC Address Filtering
- IGMP proxy and snooping

Future Applications

- Home Automation
- Home Monitoring
- DECT
- Storage

Minimum System Requirements

- PC or Macintosh with Ethernet or 802.11b/802.11n wireless connection.
- Internet Explorer 7.0+, Safari, Firefox
