

Features and Benefits

Pan, Tilt, and Digital Zoom

The DCS-5300G features a pan, tilt, and zoom function that can be controlled from the Web interface or from the included remote control. Pan the camera up to 270 degrees horizontally and tilt it up to 90 degrees vertically. The pan/tilt speed can be adjusted to your preference. 4x digital zoom¹ lets you remotely zoom in on all the action for close-up viewing.

Superior Image Quality with CCD Sensor

The integration of a CCD sensor in the DCS-5300G enables high resolution images and offers a sharp image with true color, even under low light conditions.

802.11g Wireless Networking

The DCS-5300G utilizes the speed and convenience of 802.11g wireless technology to maximize your network investment. Connect to your wireless network at a maximum wireless signal rate of up to 54Mbps² with 128-bit WEP encryption. Or connect to an Ethernet connection at 10Mbps or 100Mbps. The DCS-5300G can be integrated seamlessly with your existing network.

UPnP™ Support

The built-in UPnP™ support allows computers running Windows® XP/Me to automatically recognize the DCS-5300G and add it to your network. The DCS-5300G can be instantly accessed and viewed from My Network Places as a device on the network.

DDNS Support

By signing up with one of the many free Dynamic DNS services available on the Web, you can assign an easy-to-remember name and domain to the camera (e.g. www.mycamera.myddns.com). This allows you to remotely access your camera without having to remember the IP address, even if it has been changed by your Internet Service Provider.

Remote Access Using Web Browser

The DCS-5300G ensures compatibility with your computer and operating system by utilizing a Web management interface, accessible by using Internet Explorer version 6. You can remotely gain access to the camera, view live video, listen to sounds picked up by the built-in microphone and make changes to the camera settings from your Web browser.

Up to 30 Frames Per Second

The DCS-5300G uses MPEG4 Short Header Mode to transfer live video at up to 30 frames per second for real-time viewing.

Built-in Microphone for Monitoring and Recording Audio

The built-in microphone allows you to monitor and record sound to your video. Watch and listen to what's taking place at your home or office on your Web browser from anywhere in the world. You can even add an external microphone via the input jack for enhanced audio.

Web-based management makes it easy to quickly set up and configure the DCS-5300G. It also displays a wide array of management settings and tools, and allows remote monitoring of video and audio.

¹ 4x digital zoom enlarges an image by magnifying the pixels in a selected portion of the image by 4 times.
² Maximum wireless signal rate based on IEEE Standard 802.11g specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead lower actual data throughput rate.
³ Latest Software and Documentation are available at <http://support.dlink.com>

Use of audio or video equipment for recording the image or voice of a person without their knowledge and consent is prohibited in certain states or jurisdictions. Nothing herein represents a warranty or representation that the D-Link product provided herein is suitable for the end-user's intended use under the applicable laws of his or her state. D-Link disclaims any liability whatsoever for any end-user use of the D-Link product which fails to comply applicable state, local or federal laws.
