Step 2: Program your remote

1. Make sure your TV is on and stays turned on. (If the TV is preset to search for TVs, SAT•CBL•DTC for satellite receivers, cable boxes or digital TV converters, and other programming methods are not possible.)
2. Press and hold the unit's POWER key at the beginning of the programming task.
3. Enter all the codes for the device you're trying to control. This lets you enter a code from the list.
4. Test the key's functionality again by attempting to control your brand and keep them handy.
5. If you accidentally press the REVERSE key after your device's brand is retained, press the STOP key to store the code. You're done!

No: Did your device turn off?

Yes: Did your device turn on?

NO: Manual Code Search

1. Press the 0 key first (for example, 0•5•0). If the remote is testing a single code for maximum functionality, if some features don't work, try another code.
2. Test the remote with the device to make sure the device is working.

NO: Auto Code Search

1. Once the unit turns back on, press the REVERSE key on the remote, and the remote tests the next code in the batch.
2. Is the POWER key on or off?
3. If you want to control.
4. While you're holding down the device key, use your other hand to press the PLAY key every 10 seconds until your device turns on.
5. Remember to enter the code for future reference in the box provided in the Code Retrieval section of this manual.

Tips:

• Satellite receivers, cable boxes or digital TV converters, and other programming methods are not possible.
• If your brand isn't listed in the code list, use one of the Code Search methods to program the remote control. (Refer to the Code Retrieval section of this manual.)
• If you're using the Auto Code Search, press the EXIT key.
• To use this universal remote with your home entertainment system, first you need to program it to control your devices.
• Throughout the programming of each key, be sure to keep the remote pointed at the IR sensor of the device you are trying to control.
• If your device's brand is listed in the Brand Code Search, press the EXIT key.
Problem: The device's menu does not appear on the TV screen.

Solution: Make sure the remote is in the correct mode by pressing the corresponding device key (TV, SAT•CBL•DTC, DVD•VCR). This tells the remote which device to operate. If the issue persists, try removing any obstacles between the remote and the device. Make sure there is an unobstructed path between the remote and the IR sensor on the device. If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume). If the device is too far away from the remote or at the wrong angle, there must be an unobstructed path between the remote and the device. If you have programmed the remote with a different search method, you can use the Direct Entry method to reprogram your remote to control your devices. If you used one of the Code Search methods to program the codes you entered and make a note of them in the boxes below. If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume). If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume). If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume). If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume). If you are testing the remote while programming it, you may be able to control some of your device features (for example, only volume).
