MICROSOFT® WINDOWS VISTA™ CAPABLE¹ & PREMIUM READY²

Launching in 2007, Microsoft's new OS and enhanced Premium² screen experience will help end users find and utilize information more effectively, while improving corporate IT security, data protection, deployment and management. In addition, all OptiPlex systems offer graphics performance that grows with you, including:

- Built-in PCI-Ex 16 graphics slot — easy expansion for the already outstanding integrated graphics solution
- Support for dual independent displays — more screen real estate for greater multitasking, richer multimedia and less desktop clutter

¹ Windows Vista Capable - Based on currently available information from Microsoft. Requirements subject to change. Since the operating system and drivers are not final at this time, Windows Vista has not been tested on all user configurations. Please visit <http://www.microsoft.com/technet/windowsvista/evaluate/hardware/vistarc.msp> for more information.

² Windows Vista Premium Ready - Based on currently available information from Microsoft. Requirements subject to change. Since the operating system and drivers are not final at this time, Windows Vista has not been tested on all user configurations. Only systems with sufficient graphics and memory will meet Microsoft's requirements for running the Premium interface. Those which meet only minimum requirements for the Vista Capable designation will not provide the full benefits of Premium. Please visit <http://www.microsoft.com/technet/windowsvista/evaluate/hardware/vistarc.msp> for more information.

³ Only supported on Intel Pentium D/R 900 series and Core 2 Duo E6000 family processors.

⁴ Shared Memory - up to 256MB of system memory may be allocated to support graphics, depending on system memory size and other factors.

⁵ Dual Channel Memory - Dual-channel memory requires 2 each of the same capacity memory DIMMs.

⁶ Gigabit LOM - This term does not connote an actual operating speed of 1 Gb/sec. For high speed transmission, connection to a Gigabit Ethernet server and network infrastructure is required.

⁷ For hard drives, GB means 1 billion bytes; actual capacity varies with preloaded material and operating system and will be less.

⁸ Discs burned with this drive may not be compatible with some existing drives and players; using DVD+R media provides maximum compatibility.

⁹ Dell Client Manager - Available in October 2006 from dell.com.

¹⁰ Service may be provided by third-party. Technician will be dispatched if necessary following phone based troubleshooting. Subject to parts availability, geographical restrictions and terms of service contract. Service timing dependent upon time of day call placed to Dell. U.S. only.
