Product Features

The Dell™ S2240M/S2340M flat panel display has an active matrix, Thin-Film Transistor, Liquid Crystal Display. The monitor's features include:

- **S2240M**: 54.61 cm (21.5 inches) viewable area display. 1,920 x 1,080 resolution, plus full-screen support for lower resolutions.
- **S2340M**: 58.42 cm (23.0 inches) viewable area display. 1,920 x 1,080 resolution, plus full-screen support for lower resolutions.
- Wide viewing angle to allow viewing from a sitting or standing position, or while moving from side-to-side.
- Removable pedestal.
- Plug and play capability if supported by your system.
- On-Screen Display (OSD) adjustments for ease of set-up and screen optimization.
- Software and documentation media which includes an information file (INF), Image Color Matching File (ICM), and product documentation.
- Dell Display Manager included (comes in the CD attached with the monitor).
- Security lock slot.
- Dell Display Manager functionality.
- ENERGY STAR compliant.
- EPEAT™ Silver compliant.
- RoHS compliant.

Monitor Specifications

The following sections give you information about the various power management modes and pin assignments for the various connectors of your monitor.

Power Management Modes

If you have VESA's DPM compliance display card or software installed in your PC, the monitor automatically reduces its power consumption when not in use. This is referred to as Power Save Mode. If the computer detects input from keyboard, mouse, or other input devices, the monitor automatically resumes functioning. The following table shows the power consumption and signaling of this automatic power saving feature:

<table>
<thead>
<tr>
<th>VESA Modes</th>
<th>Horizontal Sync</th>
<th>Vertical Sync</th>
<th>Video</th>
<th>Power Indicator</th>
<th>Power Consumption</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

The OSD will only function in the normal operation mode. When any button except power button is pressed in Active-off mode, the following messages will be displayed:

**Dell S2X40M**

There is no signal coming from your computer. Press any key on the keyboard or move the mouse to wake it up. If there is no display, press the monitor button now to select the correct input source on the On-Screen-Display menu.

Activate the computer and monitor to gain access to the **OSD**.

**NOTE**: Dell S2240M/S2340M monitor is **ENERGY STAR**®-compliance.
* Zero power consumption in OFF mode can only be achieved by disconnecting the main cable from the monitor.

** Maximum power consumption with max luminance and contrast.

Plug and Play Capability

You can install the monitor in any Plug and Play compatible system. The monitor automatically provides the computer with its Extended Display Identification Data (EDID) using Display Data Channel (DDC) protocols so that the system can configure itself and optimize the monitor settings. Most monitor installations are automatic. You can select different settings if required.

This monitor comes equipped with a failsafe mechanism to shut down the monitor when a non-compliant power adapter is plugged in the DC socket. The following message will be displayed when the monitor has detected that a wrong power adapter is used.

![Dell S2X40M]

Wrong power adapter detected.
The display will shut down in 10 seconds.

To avoid damage to the unit, user is strongly advised to use the original power adapter that comes packaged together with the monitor.
Preset Display Modes

LCD Monitor Quality & Pixel Policy

During the LCD Monitor manufacturing process, it is not uncommon for one or more pixels to become fixed in an unchanging state. The visible result is a fixed pixel that appears as an extremely tiny dark or bright discolored spot. When the pixel remains permanently lit, it is known as a "bright dot". When the pixel remains black, it is known as a "dark dot". In almost every case, these fixed pixels are hard to see and do not detract from display quality or usability. A display with 1 to 5 fixed pixels is considered normal and within competitive standards. For more information, see Dell Support site at: support.dell.com.

Maintenance Guidelines

Caring for Your Monitor

⚠️ CAUTION: Read and follow the safety instructions before cleaning the monitor.
⚠️ CAUTION: Before cleaning the monitor, unplug the monitor power cable from the electrical outlet.

For best practices, follow the instructions in the list below while unpacking, cleaning, or handling your monitor:

- To clean your antistatic screen, slightly dampen a soft, clean cloth with water. If possible, use a special screen-cleaning tissue or solution suitable for the antistatic coating. Do not use benzene, thinner, ammonia, abrasive cleaners, or compressed air.
- Use a slightly dampened, warm cloth to clean the plastics. Avoid using detergent of any kind as some detergents leave a milky film on the plastics.
- If you notice a white powder when you unpack your monitor, wipe it off with a cloth. This white powder occurs during the shipping of the monitor.
- Handle your monitor with care as a darker-colored monitor may scratch and show white scuff marks more than a lighter-colored monitor.
- To help maintain the best image quality on your monitor, use a dynamically changing screen saver and power off your monitor when not in use.
Setting Up the Monitor

Dell™ S2240M/S2340M Monitor User's Guide

Attachments the Stand

NOTE: The stand base and stand riser are detached when the monitor is shipped from the factory.

1. Assemble the stand riser to stand base.

   a. Attach the stand riser to the stand base.
   b. Tighten the screw clockwise located on the base.

2. Attach the stand assembly to the monitor:
a. Place the monitor on a soft cloth or cushion near the edge of desk.

b. Align the stand assembly bracket to the monitor groove.

c. Insert the bracket towards monitor until it locks in place.

---

## Connecting Your Monitor

⚠️ **WARNING:** Before you begin any of the procedures in this section, follow the [Safety Instructions](#).

To connect your monitor to the computer:

1. Turn off your computer and disconnect the power cable.

2. Connect the blue (analog VGA) or DVI display connector cable to the corresponding video port on the back of your computer. Do not use both cables on the same computer. Use both the cables only when they are connected to two different computers with appropriate video systems.

### Connecting the Blue VGA Cable

### Connecting the monitor with DVI
Organizing Your Cables

After attaching all necessary cables to your monitor and computer, organize all cables as shown below:

1. Insert cables into cable clip.
2. Tie the cables together using the velcro strap that shipped with your monitor.
Removing the Monitor Stand

After placing the monitor panel on a soft cloth or cushion, complete the following steps to remove the base:

1. Push the release button above the stand.
2. While pushing the release button, pull the stand away from the monitor.

Using the On-Screen Display (OSD) Menu

Accessing the Menu System

**NOTE:** If you change the settings and then either proceed to another menu or exit the OSD menu, the monitor automatically saves those changes. The changes are also saved if you change the settings and then wait for the OSD menu to disappear.

1. Press the button to open the OSD menu and display the main menu.

2. Press the and buttons to toggle between options in the Menu. As you move from one icon to another, the option name is highlighted.

3. To select the highlighted item on the menu press the button again.
4. Press the and buttons to select the desired parameter.
5. Press the button to enter the slide bar and then use the or buttons, according to the indicators on the menu, to make your changes.
6. Select the to return to previous menu without accepting current settings or to accept and return to previous menu.

The table below provides a list of all the OSD menu options and their functions.

<td>Use the Input Source menu to select between different video signals that may be connected to your monitor.</td>
</tr>
</tbody>
</table>
Select **Auto Select** to scan for available input signals.

Select **VGA** input when you are using the analog (VGA) connector. Push to select the VGA input source.

Select **DVI** input when you are using the Digital (DVI) connector. Push to select the DVI input source.

**COLOR SETTINGS**

Use the **Color Setting** menu to adjust the monitor’s color settings.

**Input Color Format**

- **RGB**: Select this option if your monitor is connected to a computer or DVD player using the DVI cable.
- **YPbPr**: Select this option if your DVD player supports only YPbPr output.

**Preset Modes**

Allows you to choose from a list of preset color modes.

- **Standard**: Loads the monitor’s default color settings. This is the default preset mode.
- **Multimedia**: Loads color settings ideal for multimedia applications.
- **Movie**: Loads color settings ideal for movies.
- **Game**: Loads color settings ideal for most gaming applications.
- **Text**: Loads color settings ideal for office environment.
- **Warm**: Increases the color temperature. The screen appears warmer with a red/yellow tint.
- **Cool**: Decreases the color temperature. The screen appears cooler with a blue tint.
- **Custom Color**: Allows you to manually adjust the color settings. Press the ▲ and ▼ keys to adjust the Red, Green, and Blue values and create your own preset color mode.

In the **Movie** preset mode:

### Display Settings

- **Brightness/Contrast**
- **Auto Adjust**
- **Input Source**
- **Color Settings**
- **Display Settings**
- **Other Settings**
- **Personalize**

### Displays Settings

- **Brightness/Contrast**
- **Auto Adjust**
- **Input Source**
- **Color Settings**
- **Display Settings**
- **Other Settings**
- **Personalize**

### Aspect Ratio

Adjusts the image ratio as Wide 16:9, 4:3, or 5:4.

**NOTE:** Wide 16:9 adjustment is not required at maximum preset resolution 1920 x 1080.

### Horizontal Position

Use the ▲ or ▼ buttons to adjust image left and right. Minimum is '0' (-). Maximum is '100' (+).

### Vertical Position

Use the ▲ or ▼ buttons to adjust image up and down. Minimum is '0' (-). Maximum is '100' (+).

### Sharpness

This feature can make the image look sharper or softer. Use ▲ or ▼ to adjust the sharpness from '0' to '100'.

### Pixel Clock

**Resolution:** 1600x900 @ 60Hz  
**Maximum Resolution:** 1920x1080 @ 60Hz

### Hue

Allows you to adjust the skin tone of the image. Use ▲ or ▼ to adjust the hue from '0' to '100'.

### Saturation

Allows you to adjust the color saturation of the image. Use ▲ or ▼ to adjust the saturation from '0' to '100'.

### Demo Mode

You can launch the Demo Mode to identify the monitor display difference between Normal and Enhanced.

### Image Enhance

The function will enhance the contours of the image.

### Reset Color Settings

Resets your monitor's color settings to the factory defaults.
The Phase and Pixel Clock adjustments allow you to adjust your monitor to your preference. Use or buttons to adjust for best image quality.

**Phase**

If satisfactory results are not obtained using the Phase adjustment, use the Pixel Clock (coarse) adjustment and then use Phase (fine), again.

**Dynamic Contrast**

Allows you to increase the level of contrast to provide sharper and more detailed image quality.

**NOTE**: Dynamic Contrast is not available (greyed out) in Energy Smart modes.

**Reset Display Settings**

Select this option to restore default display settings.

---

**OTHER SETTINGS**

Select this option to adjust the settings of the OSD, such as, the languages of the OSD, the amount of time the menu remains on screen, and so on.

**Language**

Allows you to set the OSD display to one of six languages: English, Spanish, French, German, Simplified Chinese, or Japanese.

**Menu Transparency**

Allows you to adjust the OSD background from opaque to transparent.

**Menu Timer**

Allows you to set the time for which the OSD remains active after you press a key on the monitor.

Use the and keys to adjust the slider in 1 second increments, from 5 to 60 seconds.

**Menu Lock**

Controls user access to adjustments. When Lock is selected, no user adjustments are allowed. All buttons are locked.

**NOTE:**

Lock function – Either soft lock (through the OSD menu) or hard lock (press and hold the button above the power button for 10 seconds)

Unlock function – Only hard unlock (press and hold the button above the power button for 10 seconds)

**Energy Smart**

Dynamic dimming activated (The Dynamic dimming feature automatically reduces the screen-brightness level when the displayed image contains a high proportion of bright areas).

**DDC/CI**

DDC/CI (Display Data Channel/Command Interface) allows a software on your computer to adjust the monitor display settings like the brightness, color balance etc.

**Enable** (Default): Optimizes the performance of your monitor and provides a better customer experience.

**Disable**: Disables the DDC/CI option and the following message appears on the screen.
LCD Conditioning

This feature will help reduce minor cases of image retention.

If an image appears to be stuck on the monitor, select **LCD Conditioning** to help eliminate any image retention. Using the LCD Conditioning feature may take some time. LCD Conditioning feature cannot remove severe cases of image retention or burn-in.

**NOTE:** Use LCD Conditioning only when you experience a problem with image retention.

The below warning message appears once user selects “Enable” LCD Conditioning.

Factory Reset

Resets all OSD settings to the factory preset values.

Personalize

Select this option allows you to set two shortcut keys.
Shortcut Key 1
User can select from "Preset Modes", "Brightness/Contrast", "Auto Adjust", "Input Source", "Aspect Ratio" and set as shortcut key.

Shortcut Key 2
User can select from "Preset Modes", "Brightness/Contrast", "Auto Adjust", "Input Source", "Aspect Ratio" and set as shortcut key.

Reset Personalize
Allows you to restore shortcut key to the default setting.

OSD Warning Messages
When the monitor does not support a particular resolution mode you will see the following message:
This means that the monitor cannot synchronize with the signal that it is receiving from the computer. See Monitor Specifications for the horizontal and vertical frequency ranges addressable by this monitor. Recommended mode is 1,920 x 1,080.

When the Energy Smart or Dynamic Contrast feature is enabled (in these preset modes: Game or Movie), the manual brightness adjustment is disabled.

You will see the following message before the DDC/CI function is disabled:

Dell S2X40M

To allow manual adjustment of brightness, the Energy Smart / Dynamic will be switched off.
Do you want to continue?

No
Yes

When the monitor enters the Power Save mode, the following message appears:

Dell S2X40M

Entering Power Save Mode.

Activate the computer and wake up the monitor to gain access to the OSD.

If you press any button other than the power button the following messages will appear depending on the selected input:

Dell S2X40M

There is no signal coming from your computer. Press any key on the keyboard or move the mouse to wake it up. If there is no display, press the monitor button now to select the correct input source on the On-Screen-Display menu.
If VGA or DVI cable is not connected, a floating dialog box as shown below appears. The monitor will enter **Power Save Mode in 5 minutes** if left at this state.

See [Troubleshooting](#) for more information.

---

## Setting the Maximum Resolution

To set the Maximum resolution for the monitor:

**Windows XP:**
1. Right-click on the desktop and select **Properties**.
2. Select the **Settings** tab.
3. Set the screen resolution to **1920 x 1080**.
4. Click **OK**.

**Windows Vista®, Windows® 7, Windows® 8:**
1. For Windows® 8 only, select the Desktop tile to switch to classic desktop.
2. Right-click on the desktop and click **Screen Resolution**.
3. Click the Dropdown list of the Screen resolution and select **1920 x 1080**.
4. Click **OK**.

If you do not see 1920 x 1080 as an option, you may need to update your graphics driver. Depending on your computer, complete one of the following procedures.

If you have a Dell desktop or portable computer:
- Go to [support.dell.com](http://support.dell.com), enter your service tag, and download the latest driver for your graphics card.

If you are using a non-Dell computer (portable or desktop):
- Go to the support site for your computer and download the latest graphic drivers.
- Go to your graphics card website and download the latest graphic drivers.

---

## Using the Tilt

**Tilt**

With the stand assembly, you can tilt the monitor for the most comfortable viewing angle.

![Tilt Diagram]

- **NOTE:** The stand base is detached when the monitor is shipped from the factory.

Troubleshooting

Dell™ S2240M/S2340M monitor

- Self-Test
- Built-in Diagnostics
- In-Store Demo
- Common Problems
- Product Specific Problems

⚠️ **WARNING:** Before you begin any of the procedures in this section, follow the [Safety Instructions](#).

### Self-Test

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

1. Turn off both your computer and the monitor.
2. Unplug the video cable from the back of the computer. To ensure proper Self-Test operation, remove both Digital (white connector) and the Analog (blue connector) cables from the back of computer.
3. Turn on the monitor.

The floating dialog box should appear on-screen (against a black background) if the monitor cannot sense a video signal and is working correctly. While in self-test mode, the power LED remains white. Also, depending upon the selected input, one of the dialogs shown below will continuously scroll through the screen.

- **No VGA Cable**
  - The display will go into Power Save Mode in 5 minutes.

- **No DVI-D Cable**
  - The display will go into Power Save Mode in 5 minutes.

4. This box also appears during normal system operation, if the video cable becomes disconnected or damaged. The monitor will enter **Power Save Mode in 5 minutes** if left at this state.
5. Turn off your monitor and reconnect the video cable; then turn on both your computer and the monitor.

If your monitor screen remains blank after you use the previous procedure, check your video controller and computer, because your monitor is functioning properly.

### Built-in Diagnostics

Your monitor has a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with your monitor, or with your computer and video card.

**NOTE:** You can run the built-in diagnostics only when the video cable is unplugged and the monitor is in **self-test mode**.
To run the built-in diagnostics:

1. Ensure that the screen is clean (no dust particles on the surface of the screen).
2. Unplug the video cable(s) from the back of the computer or monitor. The monitor then goes into the self-test mode.
3. Press and hold the **Button 1** and **Button 4** on the right side panel simultaneously for 2 seconds. A gray screen appears.
4. Carefully inspect the screen for abnormalities.
5. Press the **Button 4** on the right side panel again. The color of the screen changes to red.
6. Inspect the display for any abnormalities.
7. Repeat steps 5 and 6 to inspect the display in green, blue, black, white, and text screens. The test is complete when the text screen appears. To exit, press the **Button 4** again.

If you do not detect any screen abnormalities upon using the built-in diagnostic tool, the monitor is functioning properly. Check the video card and computer.

### In-Store Demo

**To enter InStore OSD Mode**

All cables detached/disconnected. Monitor in "On" mode. Press and hold "menu" (Button 4) + "up" (Button 2) for 5 seconds

**To exit InStore OSD Mode**

Press power button once If power is cut off during demo, resume the demo after power is restored.

### Common Problems

The following table contains general information about common monitor problems you might encounter and the possible solutions.

<table>
<thead>
<tr>
<th>Common Symptoms</th>
<th>What You Experience</th>
<th>Possible Solutions</th>
</tr>
</thead>
</table>
| No Video/Power LED off        | No picture                           | • Ensure that the video cable connecting the monitor and the computer is properly connected and secured.  
                                   |                                      | • Verify that the power outlet is functioning properly using any other electrical equipment.  
                                   |                                      | • Ensure that the power button is depressed fully.                                           |
| No Video/Power LED on         | No picture or no brightness          | • Increase brightness & contrast controls via OSD.  
                                   |                                      | • Perform monitor self-test feature check.  
                                   |                                      | • Check for bent or broken pins in the video cable connector.  
                                   |                                      | • Ensure that the correct input source is selected via the **INPUT SOURCE** menu.  
                                   |                                      | • Run the built-in diagnostics.                                                                 |
| Poor Focus                    | Picture is fuzzy, blurry, or ghosting | • Perform Auto Adjust via OSD.  
                                   |                                      | • Adjust the Phase and Pixel Clock controls via OSD.  
                                   |                                      | • Eliminate video extension cables.  
                                   |                                      | • Reset the monitor to Factory Settings.  
                                   |                                      | • Change the video resolution to the correct aspect ratio (16:9).                           |
| Shaky/Jittery Video           | Wavy picture or fine movement        | • Perform Auto Adjust via OSD.  
                                   |                                      | • Adjust the Phase and Pixel Clock controls via OSD.  
                                   |                                      | • Reset the monitor to Factory Settings.  
                                   |                                      | • Check environmental factors.  
                                   |                                      | • Relocate the monitor and test in another room.                                           |
| Missing Pixels                | LCD screen has spots                 | • Cycle power on-off.  
                                   |                                      | • Pixel that is permanently off is a natural defect that can occur in LCD technology.       |
| Stuck-on Pixels               | LCD screen has bright spots          | • Cycle power on-off.  
                                   |                                      | • Pixel that is permanently off is a natural defect that can occur in LCD technology.       |

<table>
<thead>
<tr>
<th>Problem Description</th>
<th>Possible Solutions</th>
</tr>
</thead>
</table>
| Brightness Problems | - Reset the monitor to Factory Settings.  
- Adjust brightness & contrast controls via OSD. |
| Geometric Distortion | - Reset the monitor to Factory Settings.  
- Adjust brightness & contrast controls via OSD.  
- When using 'DVI-D', the positioning adjustments are not available. |
| Horizontal/Vertical Lines | - Reset the monitor to Factory Settings.  
- Perform Auto Adjust via OSD.  
- Adjust Phase and Pixel Clock controls via OSD.  
- Perform monitor self-test feature check and determine if these lines are also in self-test mode.  
- Check for bent or broken pins in the video cable connector. |
| Synchronization Problems | - Reset the monitor to Factory Settings.  
- Perform Auto Adjust via OSD.  
- Adjust Phase and Pixel Clock controls via OSD.  
- Perform monitor self-test feature check to determine if the scrambled screen appears in self-test mode. |
| Safety-Related Issues | - Do not perform any troubleshooting steps.  
- Contact Dell immediately. |
| Intermittent Problems | - Ensure that the video cable connecting the monitor to the computer is properly connected and is secured.  
- Reset the monitor to Factory Settings.  
- Perform monitor self-test feature check to determine if the intermittent problem occurs in self-test mode. |
| Missing Color | - Perform monitor self-test feature check.  
- Ensure that the video cable connecting the monitor to the computer is properly connected and is secured.  
- Check for bent or broken pins in the video cable connector. |
| Wrong Color | - Try different Color Preset Settings in Color Settings OSD. Adjust R/G/B value in Color Settings OSD if the Color Management is turned off.  
- Change the Input Color Format to RGB or YPbPr in Color settings OSD. |
| Image retention from a static image left on the monitor for a long period of time | - Use the Power Management feature to turn off the monitor at all times when not in use (for more information, see Power Management Modes).  
- Alternatively, use a dynamically changing screensaver. |

### Product Specific Problems

Dell™ S2240M/S2340M Monitor User's Guide

- Safety Instructions
- FCC Notice (U.S. Only) and Other Regulatory Information
- Contacting Dell

⚠️ WARNING: Safety Instructions

⚠️ WARNING: Use of controls, adjustments, or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards, and/or mechanical hazards.

For information on safety instructions, see the Product Information Guide.

FCC Notices (U.S. Only) and Other Regulatory Information

For FCC notices and other regulatory information, see the regulatory compliance website located at www.dell.com/regulatory_compliance.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. this device may not cause harmful interference
2. this device must accept any interference received including interference that may cause undesired operation

Contacting Dell

For customers in the United States, call 800-WWW-DELL (800-999-3355).

**NOTE:** If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

2. Verify your country or region in the Choose A Country/Region drop-down menu at the bottom of the page.
3. Click Contact Us on the left side of the page.
4. Select the appropriate service or support link based on your need.
5. Choose the method of contacting Dell that is convenient for you.
